PYPAL TESTCASES

TICKET#1: (FIXED)

Title: Required field validation missing on Add Entity form

Description:
When the user clicks Save while leaving required fields such as Name and Registration no. empty, the form does not display validation messages or prevent submission.

Expected:
The form should block submission and display inline validation messages for all required fields.

Actual:
No validation message is displayed when the user clicks Save with empty required fields.

Priority: Medium / High — depending on whether the form allows an invalid entity to be created.

ss:

https://drive.google.com/file/d/1sH7VvBi7ODyMSJUMKM3iaUwQL4mhMIt4/view?usp=drive_link

FIXED SS:

TICKET#2: fixed

Required field validation missing on Add Employee form

Title: Required field validation missing on Add Employee form

Description:
When the user clicks **Next** on the General Information step while leaving mandatory

fields such as **Employee Code, First Name, Last Name, Work Email, and Mobile Phone** empty, the system allows the user to proceed to the next step. Only an Employee Code error is displayed later, while validation messages for the other mandatory fields are not shown.

Expected:
The system should prevent the user from proceeding and display inline validation messages for **all empty mandatory fields**.

Actual:
The system moves the user forward despite empty mandatory fields. Only the Employee Code error is displayed later.

Priority: High

SS: Attach the screenshot showing the empty mandatory fields and Employee Code error.

https://drive.google.com/file/d/1ZgSbjsUFIVTBKbov_Re5MmU_9PloojJe/view?usp=drive_link

---

TICKET#3: fixed

Special characters and numbers accepted in employee name fields

Title: Employee Code, First Name, and Last Name fields accept invalid characters

Description:
The Employee Code, First Name, and Last Name fields accept special characters and numbers without displaying any validation message.

Expected:
The system should validate each field according to its defined input rules. Invalid characters should be rejected or an appropriate validation message should be displayed.

Actual:
The fields accept values such as `%^^^^^^^562626` without displaying a validation error.

Priority: Medium

SS: Attach the screenshot showing the invalid values in the employee fields.

TICKET#4: fixed

Invalid email format accepted in Work Email and Personal Email fields

Title: Email fields accept invalid email format

Description:
The Work Email and Personal Email fields accept invalid values such as `maham`, which do not follow a valid email format.

Expected:
The system should validate the email format and display an appropriate error message, such as **"Please enter a valid email address."**

Actual:
The system accepts `maham` in both email fields without displaying any validation error.

Priority: High

SS: Attach the screenshot showing the invalid email values.

TICKET#5: partially fixed

Mobile Phone field accepts invalid characters and incorrect length

Title: Mobile Phone field accepts alphabets, special characters, and more than 11 digits

Description:
The Mobile Phone field accepts alphabets, special characters, and values exceeding the required **11-digit** length.

Expected:
The Mobile Phone field should accept **exactly 11 numeric digits**. Invalid characters

and incorrect lengths should be rejected or an appropriate validation message should be displayed.

Actual:
The field accepts values containing alphabets, special characters, and more than 11 digits without displaying a validation error.

Priority: High

SS: Attach the screenshot showing the invalid mobile number.

TICKET#6: fixed

National ID / CNIC field accepts invalid format

Title: National ID / CNIC field accepts invalid characters and incorrect length

Description:
The National ID / CNIC field accepts alphabetic characters and invalid values without validating the required CNIC format.

Expected:
The CNIC field should accept **13 numeric digits**, with hyphens allowed in the appropriate format: `XXXXX-XXXXXXX-X`. Invalid characters, incorrect digit counts, and improperly placed hyphens should trigger an appropriate validation message.

Actual:
The field accepts alphabetic characters and invalid CNIC values without displaying a validation error.

Priority: High

SS: Attach the screenshot showing the invalid CNIC value.

TICKET#7: fixed

Date of Birth allows employees below 18 years of age

Title: Date of Birth field does not validate minimum employee age

Description:
The Date of Birth field allows the user to enter/select a date that makes the employee **under 18 years old**.

Expected:
The system should prevent employees below **18 years of age** from being added and display an appropriate validation message, such as **"Employee must be 18 years or older."** Employees who are exactly 18 or older should be accepted.

Actual:
The system allows a Date of Birth that makes the employee under 18 years old without displaying an appropriate age validation message.

Priority: High

SS: Attach the screenshot showing the invalid Date of Birth.

TICKET#8:

Employee Assets step displays incorrect progress state

Title: Employee Assets step displays active progress indicator before reaching the step

Description:
When the user is on the **Additional Information** step, the **Employee Assets** step also displays a light-green progress/underline indicator, making it appear partially active even though the user has not reached that step.

Expected:
Only the currently selected step should display the active state. Employee Assets should remain in its default/inactive state until the user reaches that step, unless the design specification defines the light-green indicator as a completed-step state.

Actual:
Employee Assets displays a light-green progress/underline indicator while Additional Information is active.

Priority: Low / Medium

SS: Attach the screenshot showing the Additional Information and Employee Assets step indicators.

TICKET#9:

Account # field does not clearly support IBAN

Title: Account # field does not indicate IBAN support

Description:
The Bank Information section contains a field labeled **Account #**, but it does not clearly indicate whether the field accepts an **Account Number, IBAN, or both**.

Expected:
The field should be clearly labeled **Account # / IBAN** if both formats are supported, or the system should provide separate fields if required by the business rules.

Actual:
The field is labeled **Account #** only, creating ambiguity about the supported input format.

Priority: Medium

SS: Attach the screenshot showing the Account # field.

TICKET#10:

Account # / IBAN field accepts values exceeding the required length

Title: Account # / IBAN field does not validate maximum length

Description:
The Account # / IBAN field accepts values exceeding the required **16 or 17 digits** without displaying a validation error.

Expected:
The field should accept only values containing **16 or 17 digits**, according to the defined

requirement. Values outside the allowed length should trigger an appropriate validation message.

Actual:
The field accepts an excessively long value without displaying an appropriate length validation error.

Priority: High

SS: Attach the screenshot showing the excessively long account number/IBAN.

TICKET#11:

Account Title field accepts numbers and special characters

Title: Account Title field accepts invalid numeric and special-character values

Description:
The Account Title field accepts numbers and special characters instead of restricting the input to alphabetic characters and spaces.

Expected:
The Account Title field should accept **alphabetic characters and spaces** only. Numbers and unsupported special characters should be rejected or an appropriate validation message should be displayed.

Actual:
The field accepts values such as `63673737****&&^` without displaying a validation error.

Priority: Medium

SS: Attach the screenshot showing the invalid Account Title.

TICKET#12:

Required Pakistani bank missing from Bank dropdown

Title: Bank AL Habib is missing from Bank dropdown

Description:
The Bank dropdown does not contain **Bank AL Habib**, which is required for selecting the employee's bank.

Expected:
The Bank dropdown should contain the required Pakistani banks, including **Bank AL Habib**, so users can select the employee's actual bank.

Actual:
Bank AL Habib is not available in the Bank dropdown/database.

Priority: Medium

SS: Attach the screenshot showing the Bank dropdown and missing bank option

TICKET#13: Edit and Delete icons do not display hover tooltips

Title: Missing hover tooltips for Edit and Delete icons on Legal Entities(UI)

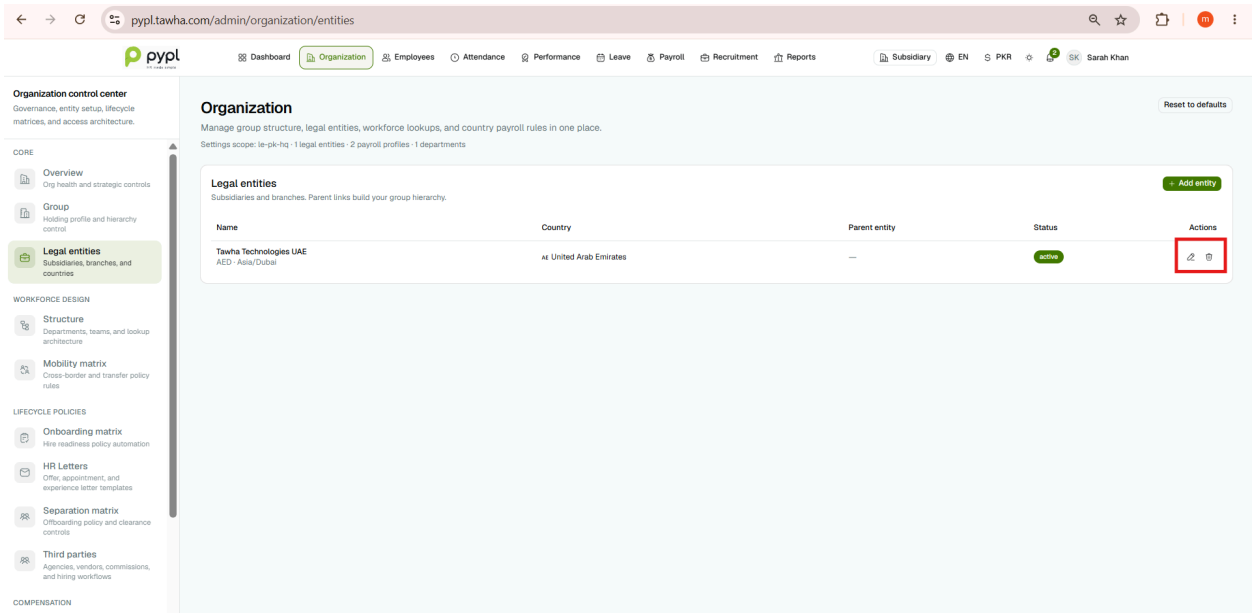
Description:
On the Organization → Legal Entities page, the Edit and Delete action icons are displayed without any hover tooltip. When the user hovers over either icon, no text appears to explain the action.

Expected:
When the user hovers over the Edit icon, a tooltip such as "Edit entity" should be displayed. When the user hovers over the Delete icon, a tooltip such as "Delete entity" should be displayed.

Actual:
No tooltip text is displayed when hovering over the Edit or Delete icons.

Priority: Low / Medium

SS:



TICKET# 14: (fixed)

Title: Reset to defaults displays database values and Delete action returns 401 error

Description:
On the Organization → Legal entities page, clicking Reset to defaults displays values from the database instead of resetting the configuration to the expected default values. Additionally, clicking the Delete icon for an entity results in a 401 Unauthorized error, preventing the entity from being deleted.

Expected:

- Clicking Reset to defaults should reset the organization configuration to the defined default values, not simply display the existing database values.
- Clicking Delete should successfully delete the selected entity after confirmation, provided the user has the required permissions.
- If the user is not authorized, the system should display a clear permission-related message instead of an unhandled error.

Actual:

- Reset to defaults displays the existing database values.

- Delete action returns a 401 Unauthorized error, and the entity is not deleted.

Priority: High

Ss:
https://drive.google.com/file/d/1Uxfl1d8Nx6QNznguaMD41oqdAqN8Pyrs/view?usp=drive_link
https://drive.google.com/file/d/1WD4uoNJpK3i-Pgc0c3BXHMqTozuxvi3j/view?usp=drive_link

TICKET# 15:

Title: Edit entity action returns 404 error and prevents updating entity information

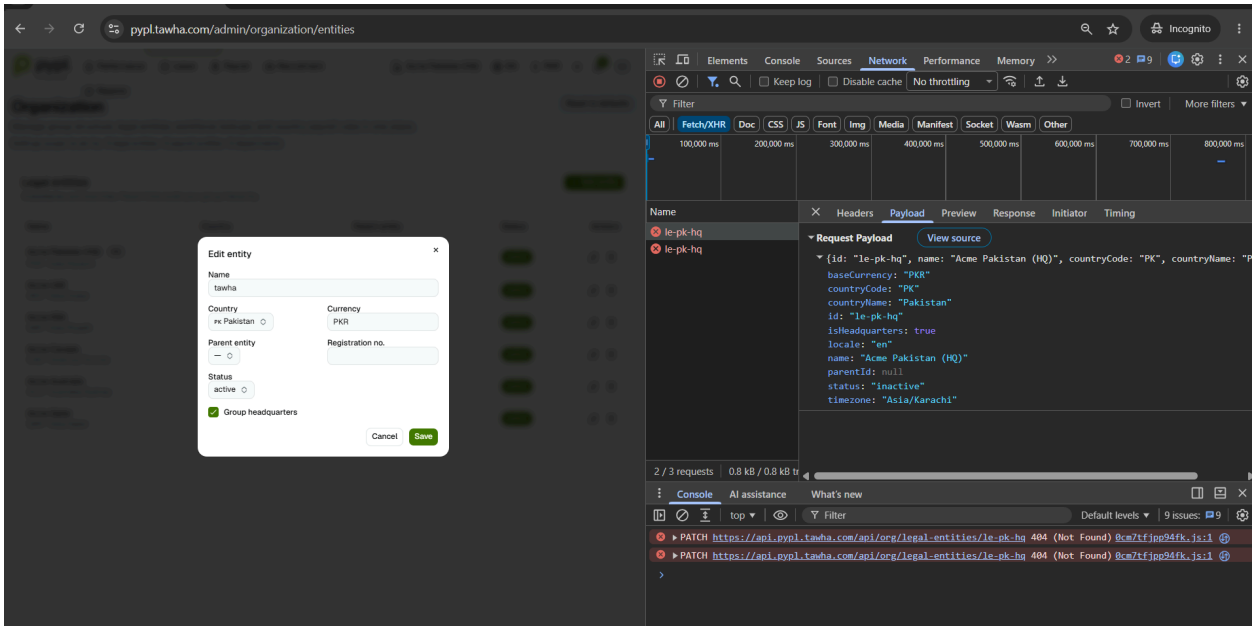
Description:
On the Organization → Legal entities page, when the user clicks the Edit icon for an existing entity, the edit modal opens, but clicking Save fails because the update request returns a 404 Not Found error. As a result, the user cannot save changes to the entity information.

Expected:
The user should be able to edit an existing entity, update its information, and save the changes successfully. The updated information should be reflected in the entity list.

Actual:
Clicking Save in the Edit entity modal returns a 404 Not Found error, and the changes are not saved.

Priority: High — the edit functionality is blocked.

SS:



TICKET# 16: (fixed)

Registration Number Validation and Form Layout Issues

Title: Registration number validation missing and form layout spacing issue on Add Entity form

Description:

On the Organization → Legal entities → Add entity form, the Registration no. field is not marked as mandatory and accepts invalid characters. The form also allows the entity to be saved when the registration number is empty. Additionally, the labels and input fields have insufficient spacing.

Expected:

- Registration no. should be marked as mandatory with an asterisk (*).
- The field should accept only alphanumeric characters (A–Z, a–z, 0–9).
- Special characters such as @, #, %, &, *, and - should not be allowed.
- Clicking Save with the field empty should block submission and display an inline validation message.
- Clicking Save with invalid characters should block submission and display an appropriate validation message.

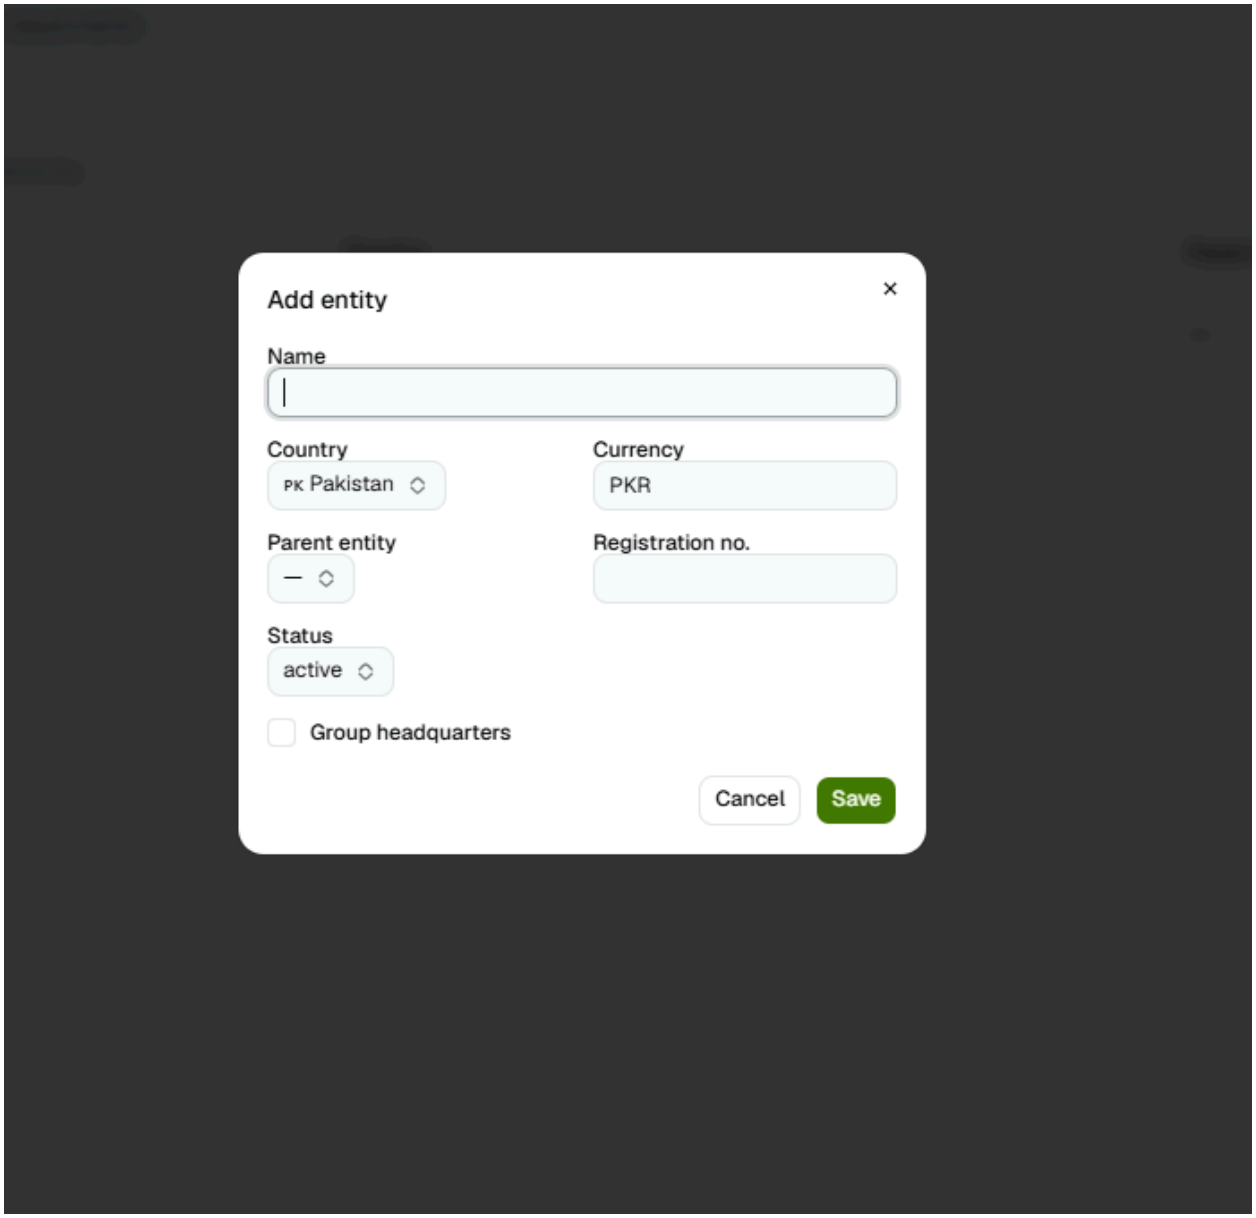
- The entity should only be saved after all required fields are completed with valid values.
- Labels and input fields should have consistent spacing.

Actual:

- Registration no. is not marked as required.
- The form saves the entity even when Registration no. is empty.
- The field accepts special characters.
- No validation message is displayed for invalid or empty input.
- Labels and input fields have insufficient spacing.

Priority: High — the form allows invalid entity data to be saved.

SS:



TICKET# 17:

Title: Entity status is not saved correctly on create and changing status on edit deletes the record

Description:
On the Organization → Legal entities → Create entity form, when the user selects Inactive from the Status dropdown and clicks Save, the entity is created with Active

status instead. Additionally, when editing an existing entity and changing its status, the record is deleted instead of being updated.

Expected:

- When creating an entity with Inactive status, the saved record should display Inactive.
- When editing an entity and changing its status, the record should be updated successfully.
- Changing the status should not delete the entity.
- The selected status should remain consistent across the create form, edit form, and entity list.

Actual:

- Selecting Inactive during entity creation still saves the record as Active.
- Changing the status during edit deletes the record instead of updating it.

Priority: High — entity status is not persisted correctly, and editing status can result in data loss.

SS:

https://drive.google.com/file/d/1DsvY_taTWql9m7H_rgUcnNakxbYV5jAA/view?usp=drive_link

TICKET# 18:

Title: Entity status is not reflected in Group entity hierarchy

Description:
On the Organization → Group page, the Entity hierarchy section displays all entities with an Active status. When an entity is marked as Inactive in the Legal entities section, the status is not reflected here. The entity hierarchy should display the actual status of each entity.

Expected:

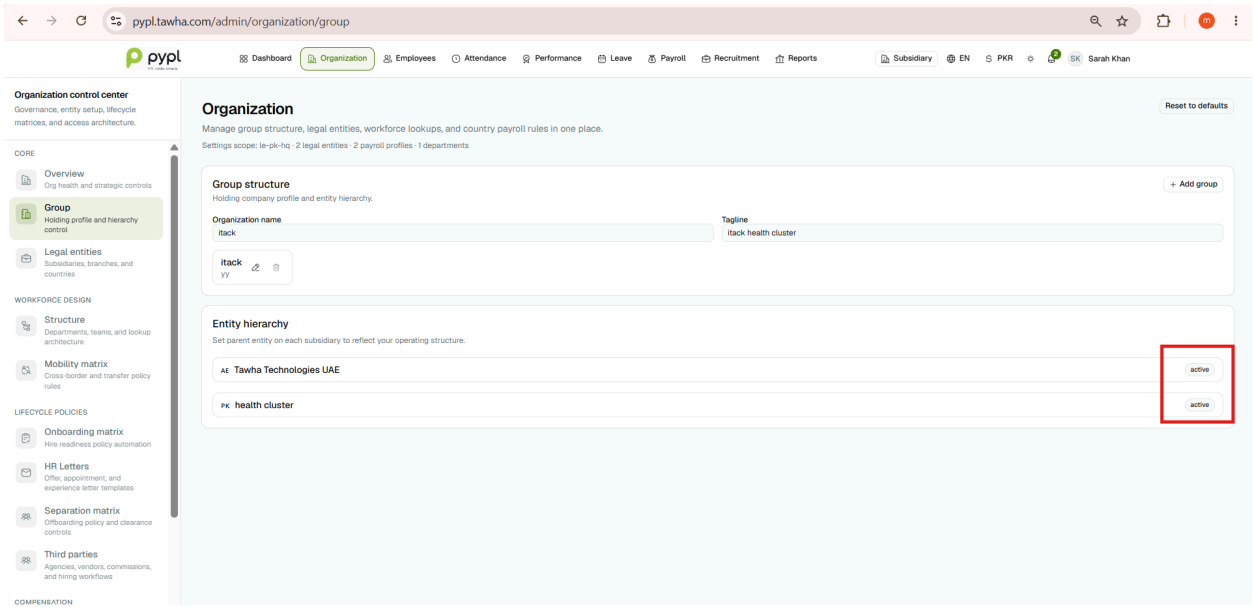
- The Entity hierarchy should display the current status of each entity.
- If an entity is Inactive, its status should be shown as Inactive here as well.

- Status changes made in Legal entities should be reflected consistently across the Group page and other relevant areas of the system.

Actual:
The Entity hierarchy displays the status as Active even when the entity is marked as Inactive.

Priority: Medium — incorrect status information is displayed across the organization.

SS:



TICKET# 19:

Title: Remove Reset to defaults, Organization name, and Tagline; add search bar on Group page

Description:
On the Organization → Group page, the Reset to defaults button, Organization name field, and Tagline field are not required for the intended Group management flow. These

elements should be removed, and a search bar should be added to help users quickly find entities in the hierarchy.

Expected:

- Remove the Reset to defaults button.
- Remove the Organization name field.
- Remove the Tagline field.
- Add a Search bar in the Entity hierarchy section.
- The search bar should allow users to search entities by name.
- Search results should update based on the entered text.
- If no entity matches the search, display an appropriate “No results found” message.

Actual:
The Group page currently displays the Reset to defaults button, Organization name, and Tagline fields, while no search bar is available for the Entity hierarchy.

Priority: Medium — unnecessary fields and missing search functionality affect usability.

SS:

https://drive.google.com/file/d/1vau7X6HBgjXjHbFAOLObOCZDAoRrX1St/view?usp=drive_link

TICKET# 20:

Delete icon state and tooltip missing on Organization Roles page

Module: Organization → Roles
Priority: Medium
Severity: Medium

Description:
On the Organization Roles page, the delete icon is disabled by default for system roles. However, after creating a custom role such as “tawha-test,” the delete icon becomes enabled. Additionally, hovering over the edit and delete icons does not display any tooltip explaining their actions.

Steps to Reproduce:

1. Navigate to Organization → Roles.
2. Observe the edit and delete icons for existing system roles.
3. Click Add role and create a new custom role.
4. Observe the edit and delete icons for the newly created role.
5. Hover over the edit and delete icons.

Expected Result:

- Delete icon should remain disabled for system roles if they cannot be deleted.
- Delete icon should be enabled for custom roles that are eligible for deletion.
- Hovering over the edit icon should display “Edit role”.
- Hovering over the delete icon should display “Delete role”.
- Tooltips should clearly explain the action and be consistent across all role cards.

Actual Result:

- The delete icon is disabled for existing system roles but becomes enabled for the newly created custom role.
- No tooltip is displayed when hovering over the edit or delete icons.

Priority: Medium — affects usability and clarity of role management actions.

SS:
https://drive.google.com/file/d/1I9HNIQsg9DmZyUfYN6g0CIm33iwgDvBT/view?usp=sharing

TICKET# 21:

Remove Reset to Defaults button from Organization Structure page

Module: Organization → Structure
Priority: Medium
Severity: Medium

Description:
The Reset to defaults button is currently displayed on the Organization → Structure page. This functionality is not required and causes issues with the remaining Structure page functionality. The button should be removed to prevent unintended changes and ensure the other features continue to work correctly.

Steps to Reproduce:

1. Navigate to Organization → Structure.
2. Observe the Reset to defaults button at the top-right of the page.
3. Use the remaining Structure page functionality, such as adding, editing, or deleting departments.
4. Observe the impact of the Reset to defaults functionality on the page.

Expected Result:

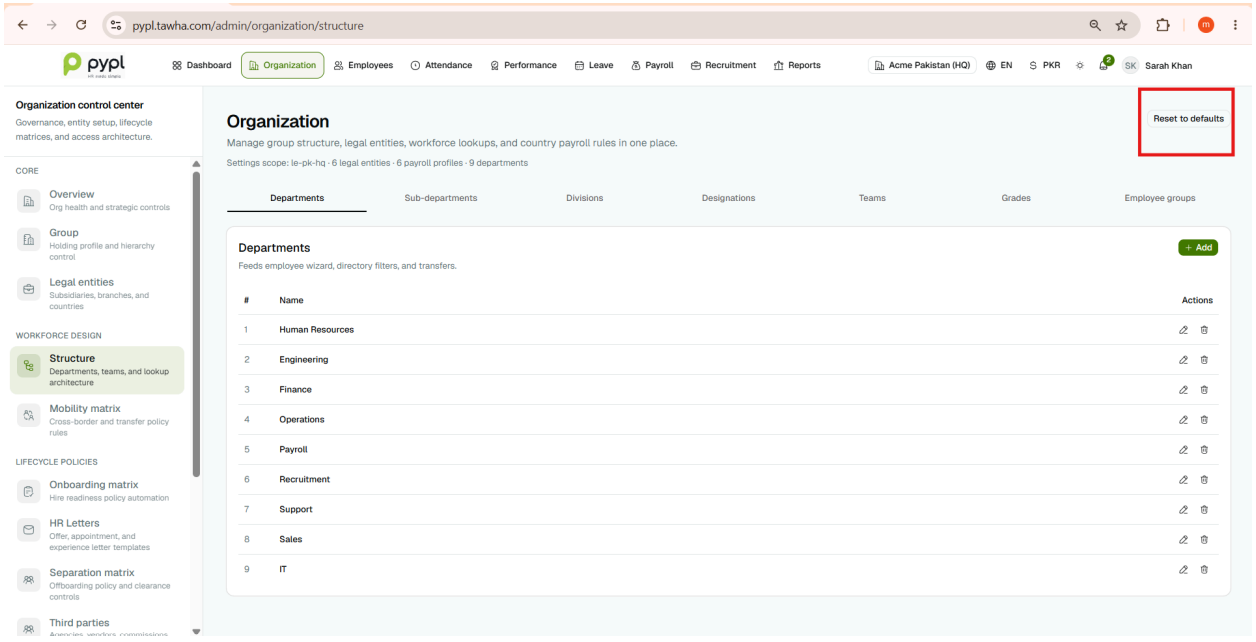
- The Reset to defaults button should be removed from the Organization → Structure page.
- The remaining Structure page functionality should continue to work correctly without being affected by the removed button.

Actual Result:

- The Reset to defaults button is currently displayed.
- Its functionality causes issues with the remaining Structure page features.

Priority: Medium — affects the stability and usability of the Organization Structure module.

SS:



TICKET# 22:

Title: Improve Organization Structure UI by converting the department list into a table

Module: Organization → Structure
Priority: Medium
Severity: Medium

Description:
The current Organization → Structure page displays departments in a basic list layout with excessive spacing. The overall UI does not provide a clear, structured way to view and manage department records. The department list should be redesigned into a proper table layout to improve readability, alignment, and usability.

Steps to Reproduce:

1. Navigate to **Organization** → **Structure**.
2. Observe the **Departments** tab.
3. Review the department listing and available actions.

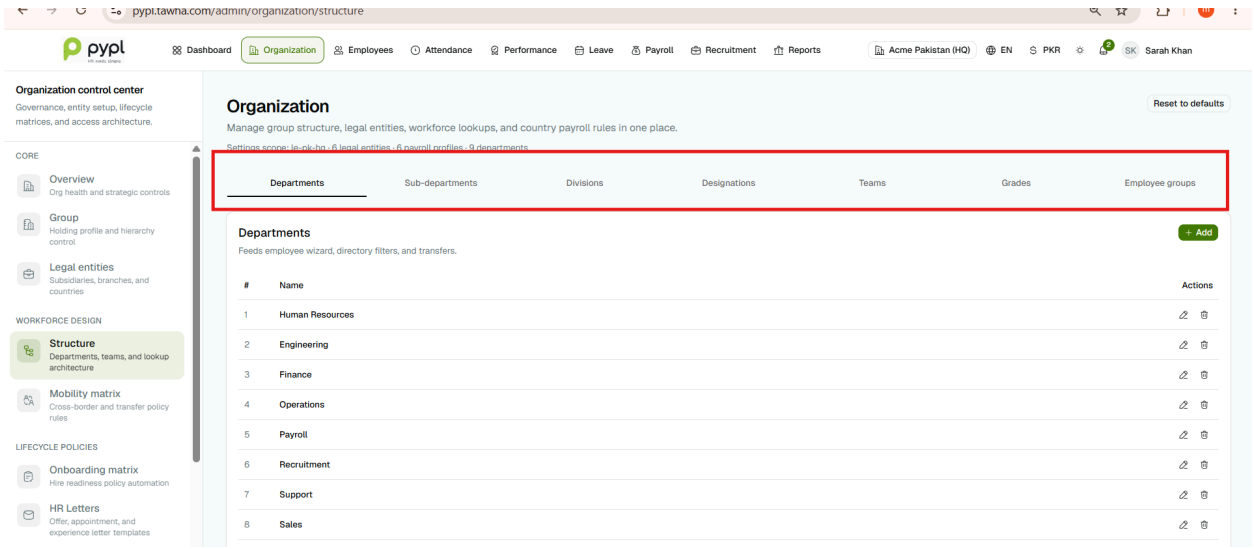
Expected Result:

- Departments should be displayed in a **proper table layout**.
- The table should include **#**, **Name**, and **Actions** columns.
- Edit and Delete icons should be aligned consistently in the Actions column.
- The **+ Add** button should remain accessible and aligned with the table heading.
- The same table structure should be used consistently across the other Structure tabs.
- The **Reset to defaults** button should be removed.

Actual Result:

- The current department listing uses a basic layout with excessive spacing.
- The UI does not provide a clear, structured table-based view for managing departments.

SS:



TICKET# 23: fixed

Title: Remove Reset to Defaults button from Mobility Matrix module

Module: Organization → Mobility Matrix
Priority: Medium
Severity: Medium

Description:
The **Reset to defaults** button is currently displayed on the Mobility Matrix page. This functionality is not required and should be removed to prevent unintended changes to mobility rules.

Steps to Reproduce:

1. Navigate to **Organization** → **Mobility Matrix**.
2. Observe the **Reset to defaults** button at the top-right of the page.

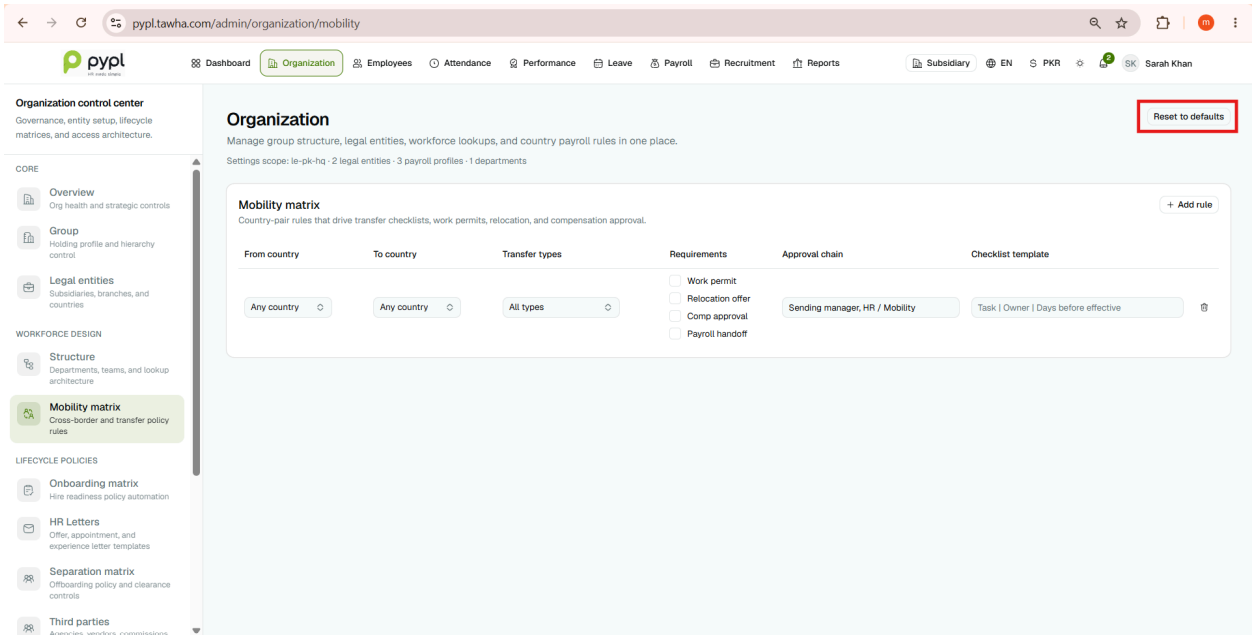
Expected Result:

- The **Reset to defaults** button should be removed from the Mobility Matrix module.
- The remaining functionality, including adding and managing mobility rules, should continue to work correctly.

Actual Result:

- The **Reset to defaults** button is currently displayed.

SS:



TICKET# 24: fixed

Ticket Title: HR Letters – Templates Not Available

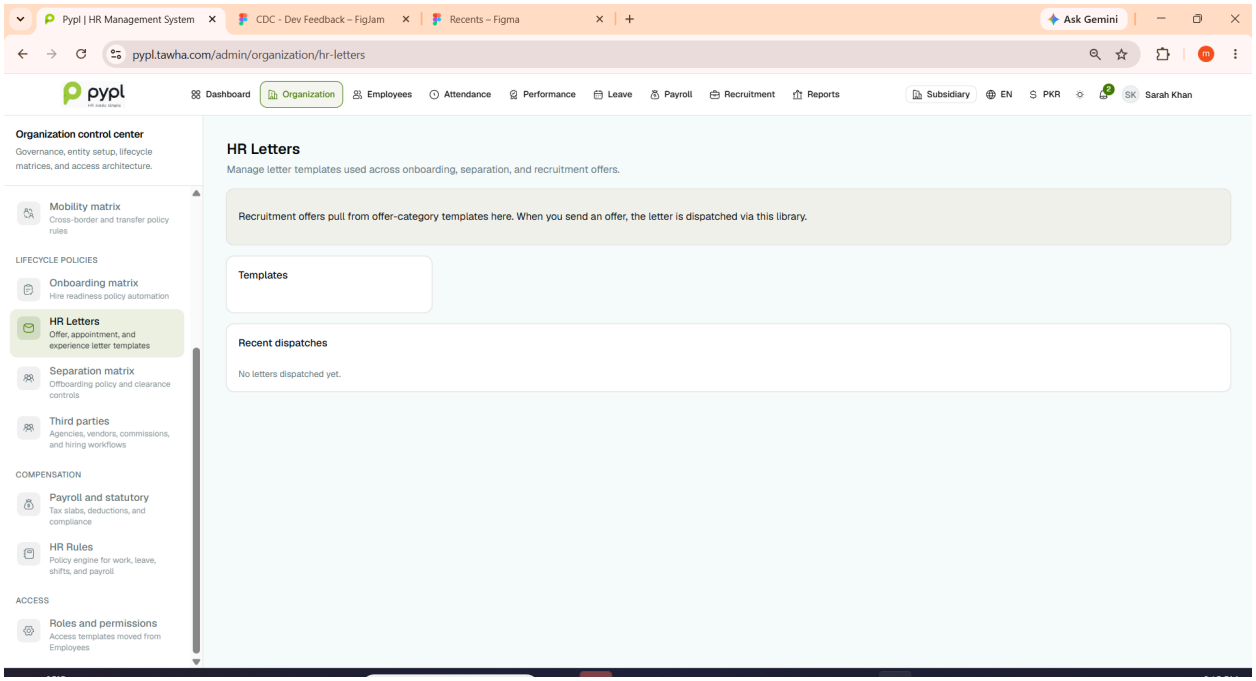
Module: Organization → HR Letters
URL: `/admin/organization/hr-letters`

Description:
The HR Letters module currently does not display any letter templates. The Templates section is empty, and there is no visible option to add or manage templates.

Expected Result:
The Templates section should display the available HR letter templates. Users should be able to add, view, edit, and manage templates according to the available functionality. If no templates exist, an appropriate empty-state message with an **Add Template** option should be displayed.

Actual Result:
The Templates section is empty, and no letter templates or **Add Template** option are available.

Priority: Medium



TICKET# 25:

Ticket Title: HR Rules – Add Labels and Descriptions for Break and Grace Period Fields

Module: Organization → HR Rules → Shifts
URL: `/admin/organization/hr-rules`

Description:
In the **Create shift** section, the fields for **Break** and **Grace period** are displayed without proper labels. Users cannot understand what these fields represent or why they are required.

The **Break** field should clearly indicate that it defines the duration of the break allowed during a shift. The **Grace period** field should indicate the additional time allowed for employees to arrive after the shift start time without being marked late.

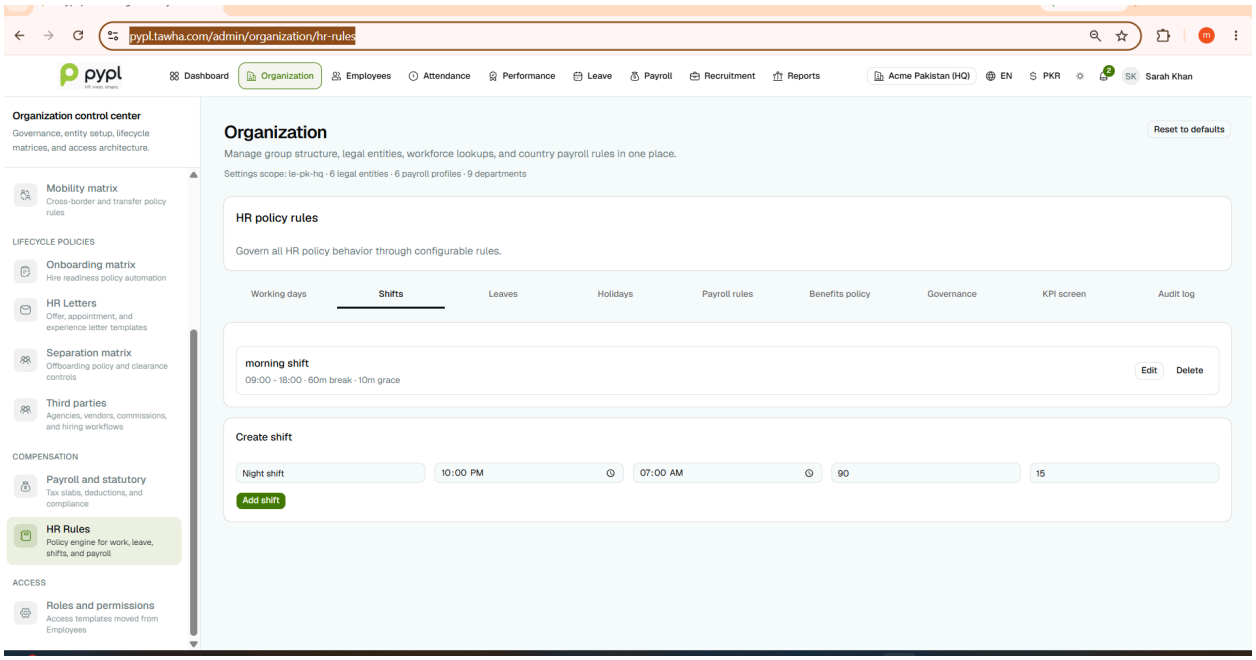
Expected Result:

- Add a clear **Break duration** label above the break input field.

- Add a clear **Grace period** label above the grace period input field.
- Add short helper text or tooltips explaining the purpose of both fields.
- Ensure the labels and descriptions are consistent with the existing UI.

Actual Result:
The break and grace period fields are displayed without labels or explanations, making their purpose unclear.

Priority: Medium
SS:



TICKET# 26:

Ticket Title: HR Rules – Import Template Functionality Not Working

Module: Organization → HR Rules → Holidays
URL: `/admin/organization/hr-rules`

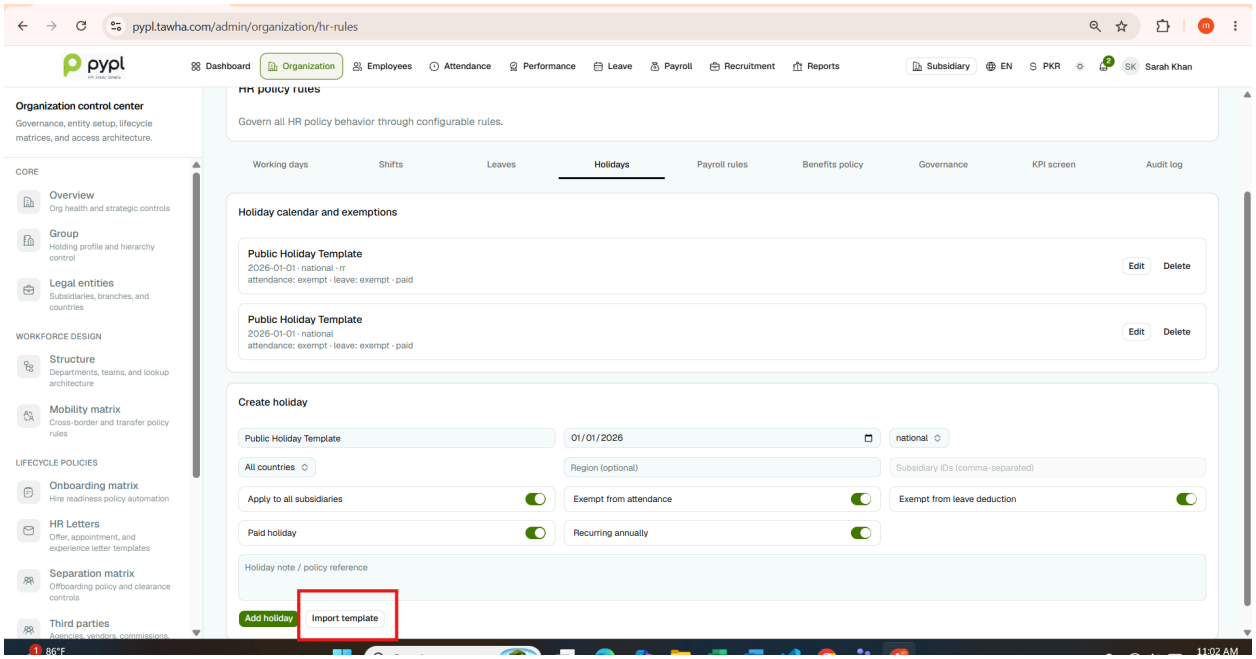
Description:
The **Import template** button is available in the Create holiday section, but its purpose is unclear and the functionality is not working. Users cannot understand what type of template should be imported or how it will help them create holidays.

Expected Result:
The **Import template** button should allow users to import a holiday template containing the required holiday information, such as holiday name, date, country, region, and applicable subsidiaries. The imported template should populate the relevant fields or create the holiday records according to the intended functionality.

If the feature is not required, the button should be removed to avoid confusion.

Actual Result:
The **Import template** button is visible, but its functionality is not working and there is no clear explanation of its purpose.

Priority: Medium
SS/VIDEO:



TICKET# 27:

Employee Group Allows Excessively Long Values

Module: Organization → Structure → Employee Groups
Priority: Medium
Type: Bug

Description:
The Employee Group name field allows users to save excessively long values without any character limit or validation. This causes the saved name to extend beyond the available table width and affects the UI layout.

Steps to Reproduce:

1. Navigate to Organization → Structure → Employee Groups.
2. Click Add.
3. Enter an excessively long value in the Employee Group name field.
4. Click Save.
5. Observe the saved Employee Group in the table.

Expected Result:
The system should enforce a maximum character limit for Employee Group names and display a clear validation message when the limit is exceeded. Long names should also be displayed properly without breaking the table layout.

Actual Result:
The system allows excessively long values to be saved. The saved name extends beyond the available table width and causes horizontal scrolling, as shown in the attached screenshot.

https://drive.google.com/file/d/1NCkKaWahjxgJgogGJ5-mHrDyzbce7-Qb/view?usp=drive_link

TICKET# 28:

Duplicate Employee Group Not Saved Without Validation Message

Module: Organization → Structure → Employee Groups
Priority: Medium
Type: Bug

Description:
The system prevents users from saving a duplicate Employee Group name, but it does not display any validation message explaining why the data cannot be saved. For example, when **“maam”** already exists, entering the same name again does not save the record, but no error or feedback is shown.

Steps to Reproduce:

1. Navigate to **Organization → Structure → Employee Groups**.
2. Click **Add**.
3. Enter an Employee Group name that already exists, such as **“maam”**.
4. Click **Save**.
5. Observe the result.

Expected Result:
The system should prevent duplicate Employee Group names from being saved and display a clear validation message, such as **“Employee Group name already exists.”**

Actual Result:
The duplicate Employee Group is not saved, but no validation message or popup is displayed to inform the user why the save action failed.

Acceptance Criteria:

- Prevent duplicate Employee Group names from being saved.
- Display a clear validation message when a duplicate is entered.
- Ensure the message is visible near the field or through an appropriate notification.
- Apply the same validation when creating and editing Employee Groups.

Reference:
https://drive.google.com/file/d/1NCkKaWahjxgJgogGJ5-mHrDyzbce7-Qb/view?usp=drive_link

TICKET# 29:

Generic “Add Item” Heading Does Not Identify the Module

Module: Organization → Structure → Departments
Priority: Low
Type: UI/UX Improvement

Description:
When adding a new department, the modal displays a generic heading **“Add item”**. The heading does not identify which module or type of item is being created, which may cause confusion for users.

Steps to Reproduce:

1. Navigate to **Organization → Structure → Departments**.

2. Click **Add**.
3. Observe the modal heading.

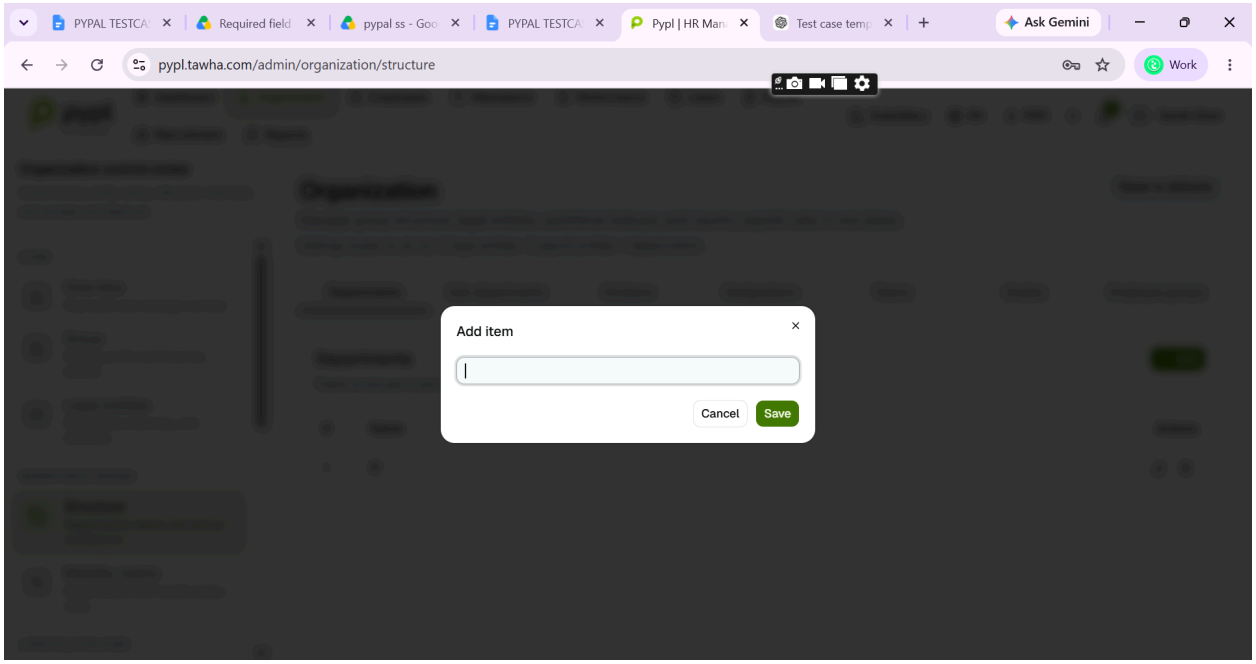
Expected Result:
The modal heading should clearly identify the item being created, such as **“Add Department”**.

Actual Result:
The modal displays the generic heading **“Add item”**, without specifying that the user is adding a department.

Acceptance Criteria:

- Replace the generic **“Add item”** heading with a module-specific heading.
- Display **“Add Department”** when adding a department.
- Apply the same naming convention to other Structure modules, such as **“Add Sub-department,” “Add Division,” “Add Designation,” “Add Team,” “Add Grade,”** and **“Add Employee Group.”**
- Ensure the heading remains consistent when editing items, such as **“Edit Department.”**

Reference:



TICKET# 30: not fixed

Website Is Not Fully Responsive

Module: Entire Website
Priority: High
Type: UI/UX Bug

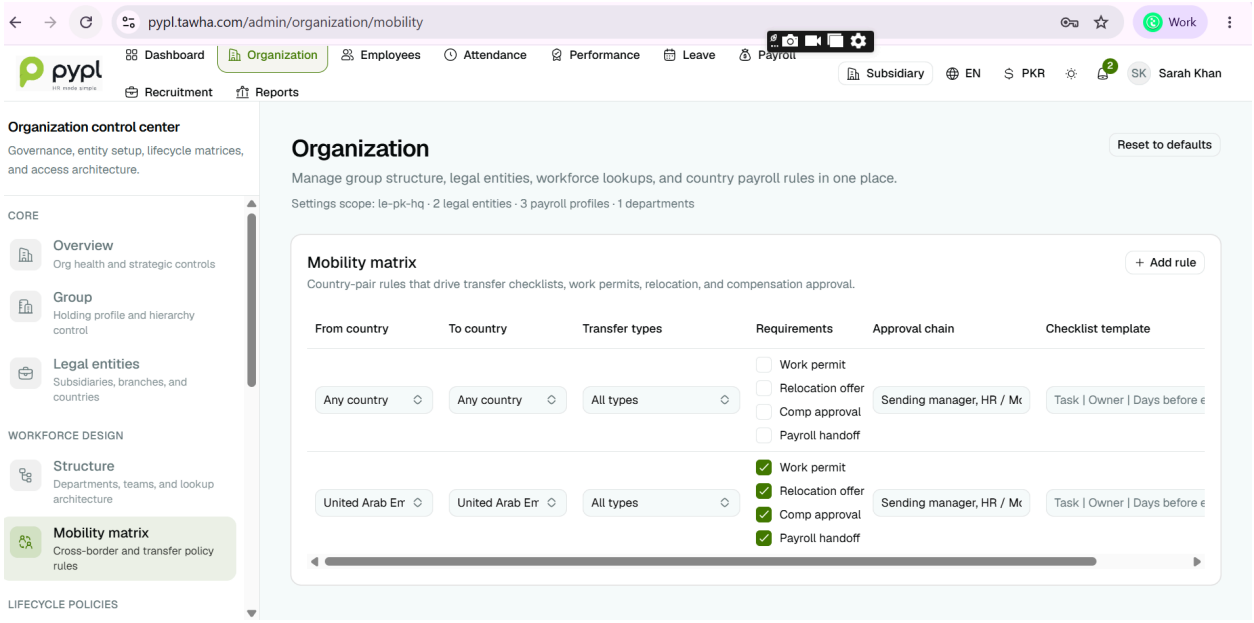
Description:
The website is not fully responsive across different screen sizes. On smaller viewports, the layout does not adapt properly, causing content to be cut off, fields to extend beyond the visible area, and horizontal scrolling to appear. This issue is not limited to the Mobility Matrix module and affects the overall website.

Steps to Reproduce:

1. Open the website on a desktop browser.
2. Resize the browser window to different screen sizes.
3. Navigate through different modules and pages.
4. Observe the layout, tables, forms, navigation, and content areas.

Expected Result:
The website should be fully responsive across desktop, tablet, and mobile screen sizes. All content, fields, buttons, tables, and navigation elements should adapt properly to the available viewport without unnecessary horizontal scrolling or content being cut off.

Actual Result:
The website is not fully responsive. On smaller screen sizes, various pages and components do not adapt properly, resulting in content overflow, cut-off fields, and horizontal scrolling.



TICKET# 31:

Incomplete Arabic Translation in Organization Module

Module: Organization → Mobility Matrix
Environment: `pypl.tawha.com`
Language: Arabic (AR)

Description:
When the user switches the website language to Arabic, several elements in the Organization module remain in English instead of being translated. The page also does not fully adapt to the Arabic RTL layout.

Steps to Reproduce:

1. Open the Pypl HR Management System.
2. Navigate to **Organization** → **Mobility Matrix**.
3. Switch the language from **EN to AR**.
4. Observe the page content.

Actual Result:

- **Reset to defaults** remains in English.
- **Organization** heading and description remain in English.
- **Mobility matrix** heading and description remain in English.

- Table headers such as **From country, To country, Transfer types, Requirements, Approval chain,** and **Checklist template** remain in English.
- **Add rule** button remains in English.
- Sidebar menu items remain in English.
- Some elements are not properly aligned for RTL.

Expected Result:
All visible text should be translated into Arabic, including headings, descriptions, buttons, table headers, form labels, and sidebar menu items. The page should also follow a consistent **RTL layout**, with correct alignment, spacing, and positioning of all elements.

Priority: Medium
Type: Bug / Localization & RTL

Suggested Fix:
Review the Arabic translation coverage for the entire Organization module and ensure all UI strings have Arabic translations. Also verify RTL styling across the page, including the sidebar, content area, buttons, tables, and form controls.

https://drive.google.com/file/d/178IBhCjMWmbzVX_UmjtIUDPxWTCGyKti/view?usp=drive_link

TICKET# 32:

Incomplete Arabic Translation Across Organization Module

Module: Organization
Environment: `pypl.tawha.com`
Language: Arabic (AR)

Description:
When the user switches the website language to Arabic, several pages under the Organization module remain partially in English. The Arabic RTL layout is also inconsistent, with some content appearing in the wrong direction or alignment.

Steps to Reproduce:

1. Open the Pypl HR Management System.
2. Navigate to **Organization**.
3. Switch the language from **EN to AR**.
4. Visit the following pages:

    - Organization Overview
    - Group
    - Legal Entities
    - Mobility Matrix
    - Other Organization submodules

Actual Result:

- **Organization Overview:** Headings, descriptions, and dashboard content remain in English.
- **Group: Reset to defaults**, **Organization**, **Group structure**, **Add group**, **Tagline**, **Organization name**, and other labels remain in English.
- **Legal Entities: Reset to defaults**, **Add entity**, **Legal entities**, **Actions**, **Status**, **Parent entity**, **Country**, and **Name** remain in English.
- **Mobility Matrix:** Previously observed untranslated headings, buttons, table headers, and form labels are still present.
- Sidebar menu items and other Organization-related labels are not fully translated.
- Some text appears in the wrong direction, with punctuation and periods displayed incorrectly.
- RTL alignment and spacing are inconsistent across the pages.

Expected Result:
All visible UI text across the Organization module should be translated into Arabic, including headings, descriptions, buttons, table headers, form labels, and sidebar menu items. The entire module should follow a consistent **RTL layout**, with correct text direction, alignment, spacing, and positioning of all elements.

Priority: Medium
Type: Bug / Localization & RTL

Suggested Fix:
Review the Arabic translation coverage for the entire Organization module rather than fixing individual pages only. Ensure all UI strings have Arabic translations and that RTL styling is applied consistently across the sidebar, content area, buttons, tables, forms, and dashboard components.

TICKET# 33:

Incomplete Arabic Translation in Employees Module

Module: Employees → Employee List
Environment: `pypl.tawha.com`
Language: Arabic (AR)

Description:
When the user switches the website language to Arabic, the Employees module remains partially in English. The employee directory, navigation, filters, summary cards, and table content are not fully translated into Arabic.

Steps to Reproduce:

1. Open the Pypl HR Management System.
2. Navigate to **Employees → Employee List**.
3. Switch the language from **EN to AR**.
4. Observe the page and its available employee modules.

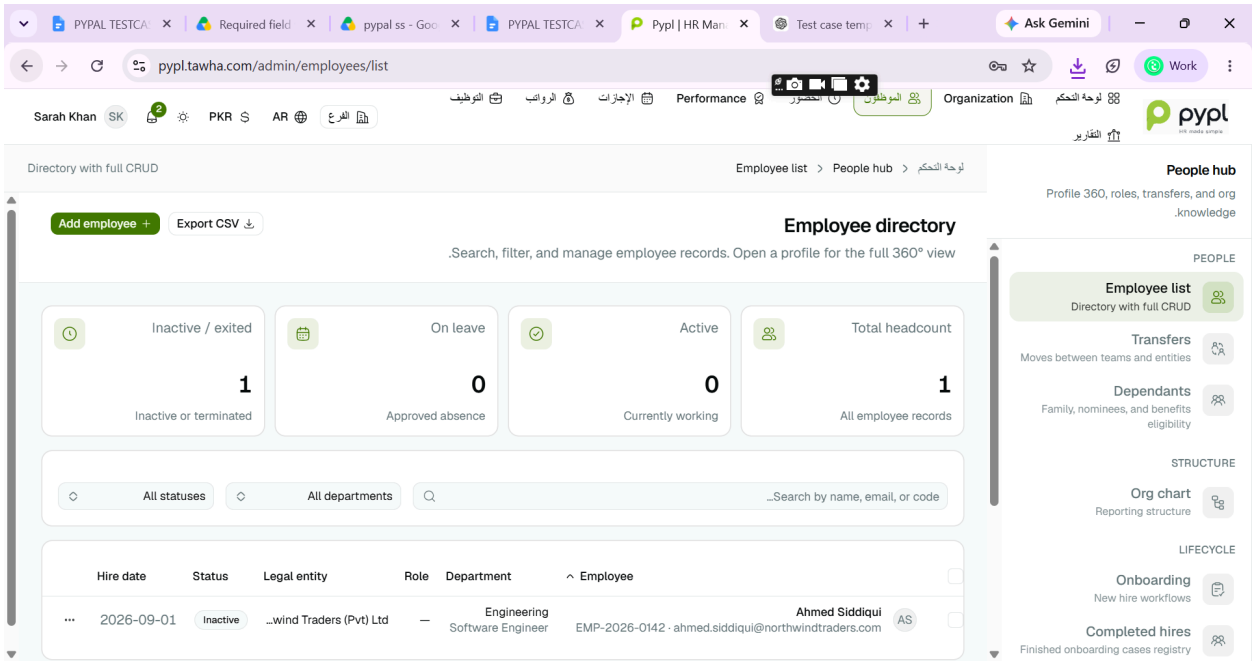
Actual Result:

- **Employee List** and **People hub** remain in English.
- **Add employee** and **Export CSV** buttons remain in English.

- Summary cards such as **Inactive / exited, On leave, Active,** and **Total headcount** remain in English.
- Search and filter labels such as **All statuses, All departments,** and **Search by name, email, or code** remain in English.
- Table headers such as **Hire date, Status, Legal entity, Role, Department,** and **Employee** remain in English.
- Sidebar modules such as **Transfers, Dependants, Org chart, Onboarding,** and **Completed hires** remain in English.
- Supporting descriptions and other employee-related labels are also not fully translated.

Expected Result:
All visible text across the Employees module should be translated into Arabic, including headings, descriptions, buttons, summary cards, filters, table headers, and sidebar menu items. The entire module should also follow a consistent **RTL layout**.

Priority: Medium
Type: Bug / Localization & RTL



TICKET# 34:

Title: French Language selection does not translate the website content across all modules

Module: Global / All Modules
Severity: High
Priority: High

Description:
When the user changes the application language, the selected language is displayed in the header, but a significant amount of the website content remains in English. This issue is visible across multiple modules, including Organization, Employees, and HR Rules.

Steps to Reproduce:

1. Log in to the application.
2. Change the language from English to **French**.
3. Navigate through different modules, such as:
    - Organization
    - Employees
    - Attendance
    - Performance
    - Leave
    - Payroll
    - Recruitment
    - Reports
4. Observe the page content, navigation, buttons, labels, and messages.

Actual Result:
The language selector changes to French, but many user-facing texts across the website remain in English. The same issue is also observed in other language versions.

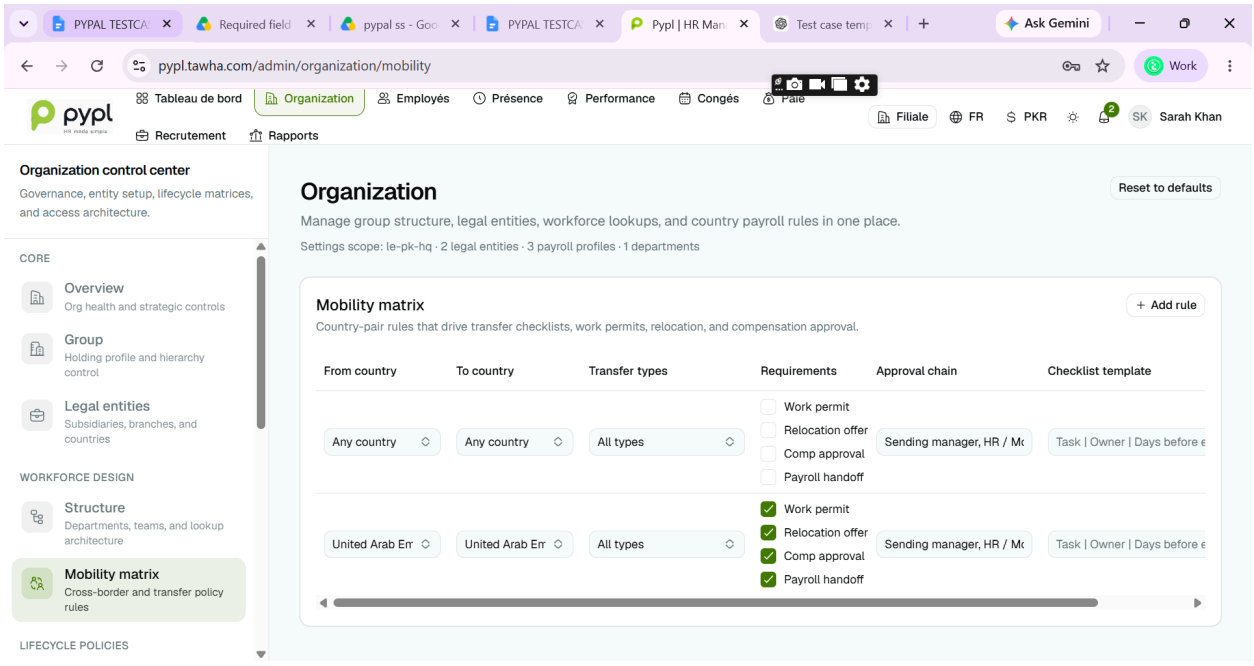
Expected Result:
When a language is selected, **all supported user-facing content across the website should be translated into that language**, including:

- Header and sidebar navigation
- Page titles and descriptions
- Buttons and form labels
- Dropdown options
- Table headings
- Validation and error messages

- Success and confirmation messages
- Empty states
- Modals and popups
- Tooltips
- Breadcrumbs
- Pagination and filters

Acceptance Criteria:

- All supported languages are properly applied across the website.
- No untranslated English text remains in the selected language.
- Translation is consistent across all modules.
- Dynamic content and validation messages are also localized.
- RTL languages maintain correct layout and alignment.
- No layout issues occur due to translated text.
- English language functionality remains unaffected.



TICKET# 35:

Title: Global localization defect – Urdu translation is incomplete across the website

Module: Global / All Modules
Severity: High
Priority: High

Description:
When the user selects **Urdu (UR)**, the application changes the language indicator, but a significant amount of user-facing content remains in English. The issue is visible on the Organization → Mobility matrix page and should be treated as a website-wide localization defect.

Steps to Reproduce:

1. Log in to the application.
2. Select **Urdu (UR)** from the language selector.
3. Navigate to **Organization** → **Mobility matrix**.
4. Observe the page content and layout.
5. Navigate through other modules and repeat the observation.

Actual Result:
The language selector displays **UR**, but the following content remains in English:

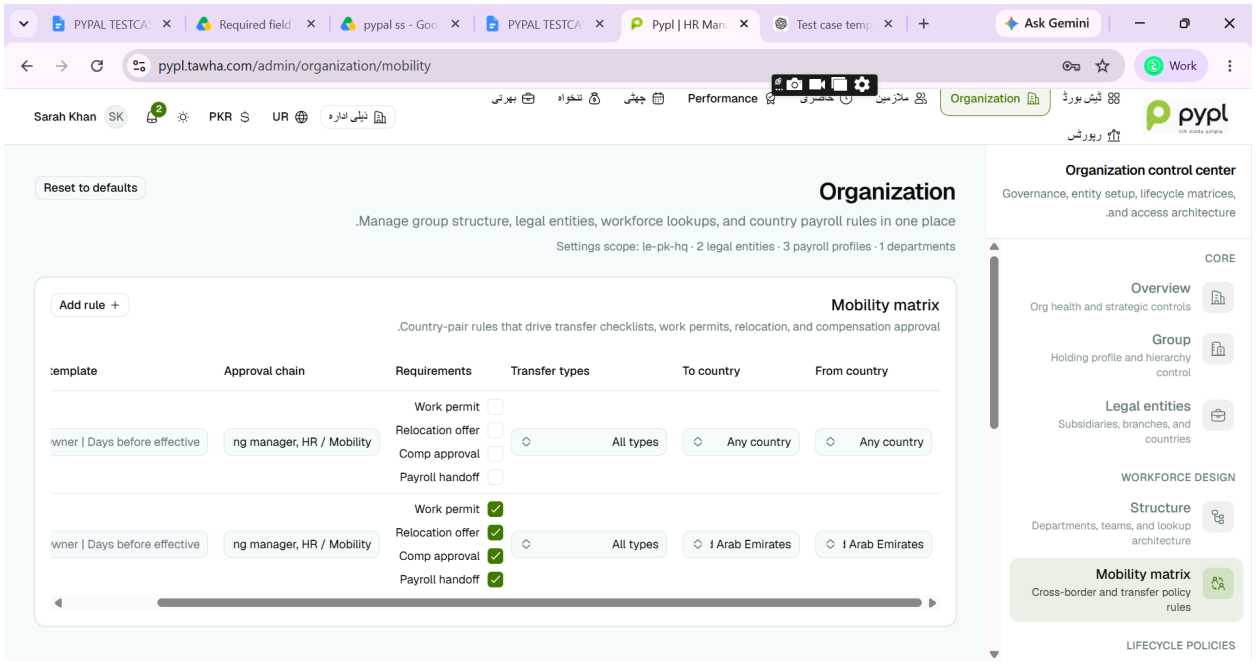
- Organization
- Mobility matrix
- Country-pair rules that drive transfer checklists, work permits, relocation, and compensation approval.
- Reset to defaults
- Add rule
- From country
- To country
- Transfer types
- Requirements
- Approval chain
- Checklist template
- Any country
- All types
- Work permit
- Relocation offer
- Comp approval
- Payroll handoff
- Sending manager, HR / Mobility
- Task | Owner | Days before effective

The page also does not properly follow the Urdu RTL layout.

Expected Result:
When Urdu is selected, **all supported user-facing content across the website should be translated into Urdu**, and the layout should correctly support RTL.

Acceptance Criteria:

- All visible text is translated into Urdu.
- No English text remains in the selected language.
- All modules follow the same localization standard.
- Dropdown options, validation messages, and popups are translated.
- RTL alignment, text direction, and spacing are correct.
- No text clipping, overlap, or horizontal overflow occurs due to RTL.
- English and other language versions remain unaffected.



TICKET# 36: (fixed)

Title: Breadcrumb navigation is displayed incorrectly / inconsistently on Employee List page

Module: Employees → Employee List
Severity: Medium
Priority: Medium

Description:
The Employee List page displays the breadcrumb navigation as:

Dashboard → People hub → Employee list

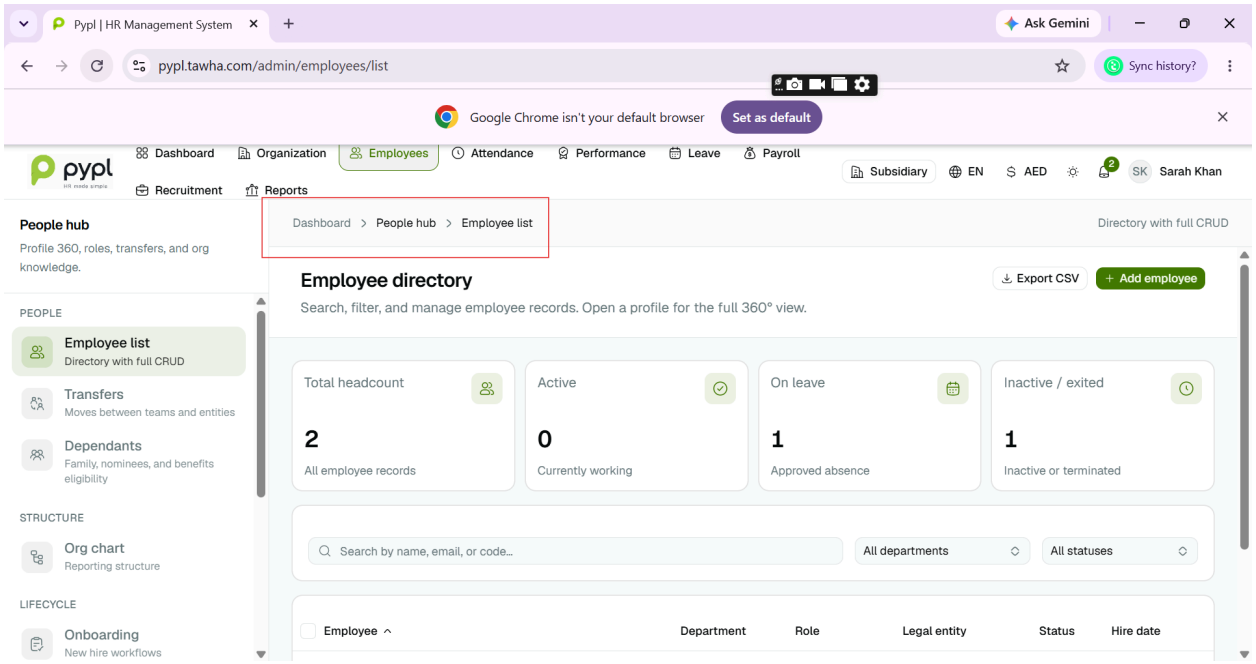
The breadcrumb appears visually disconnected from the main page content and does not follow the same layout/alignment pattern as the rest of the page. The positioning and spacing make the navigation look inconsistent with the overall UI.

Steps to Reproduce:

1. Navigate to **Employees**.
2. Open **Employee list**.
3. Observe the breadcrumb section above the Employee directory heading.

Actual Result:
The breadcrumb is displayed in a separate wide container with excessive spacing and inconsistent alignment relative to the Employee directory content.

Expected Result:
The breadcrumb should be properly aligned with the Employee directory content and follow a consistent layout/design pattern across the application.



TICKET# 37:

Title: Missing validation when adding payroll rule with empty required fields

Module: Organization → HR Rules → Payroll Rules
Severity: Medium
Priority: High

Description:
When the user clicks **“Add payroll rule”** without entering values in the required fields, the system does not display any validation message. The form contains fields such as **Rule name, Condition, and Effect**, but empty values can be submitted without providing feedback to the user.

Steps to Reproduce:

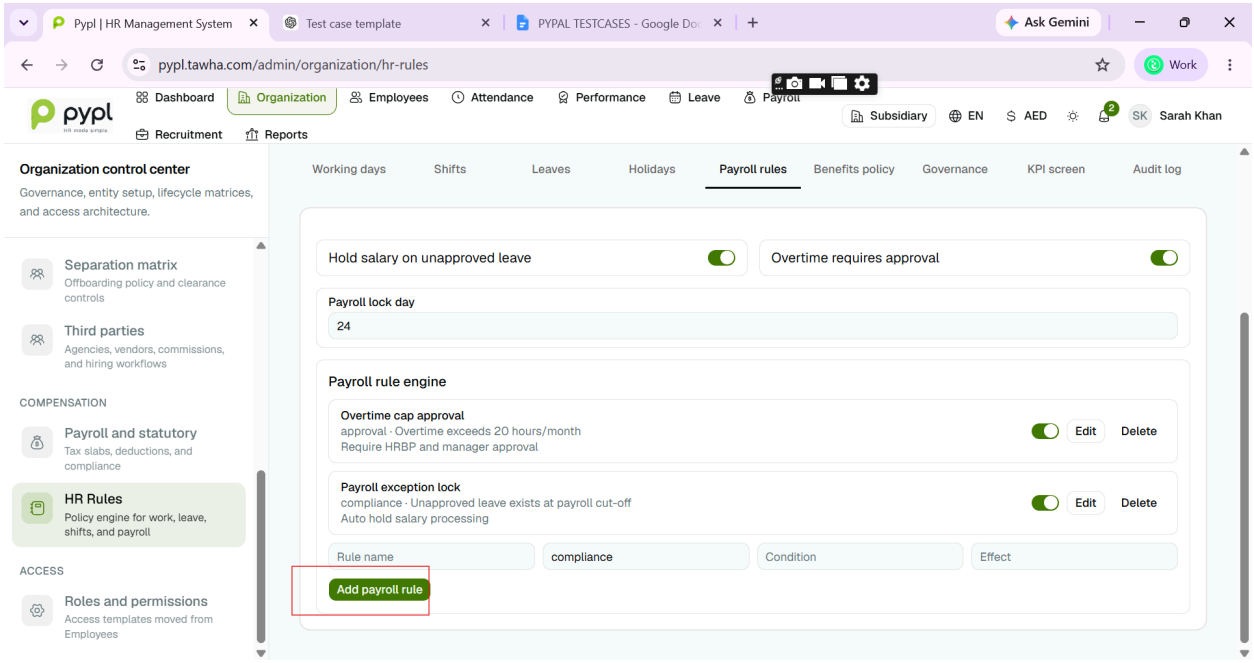
1. Navigate to **Organization** → **HR Rules**.
2. Open the **Payroll rules** tab.
3. Scroll to the **Payroll rule engine** section.
4. Leave the **Rule name, Condition, and Effect** fields empty.
5. Click **Add payroll rule**.

Actual Result:
No validation message is displayed when the user submits the empty form.

Expected Result:
The system should validate all mandatory fields and display clear inline validation messages, for example:

- **Rule name:** `Rule name is required.`
- **Condition:** `Condition is required.`
- **Effect:** `Effect is required.`

The payroll rule should **not be created** until all mandatory fields are completed.



TICKET# 38:

Bug: Same Start and End Time Allowed for Shift

Actual:
User can create a shift with:

- Start Time: **06:00 PM**
- End Time: **06:00 PM**

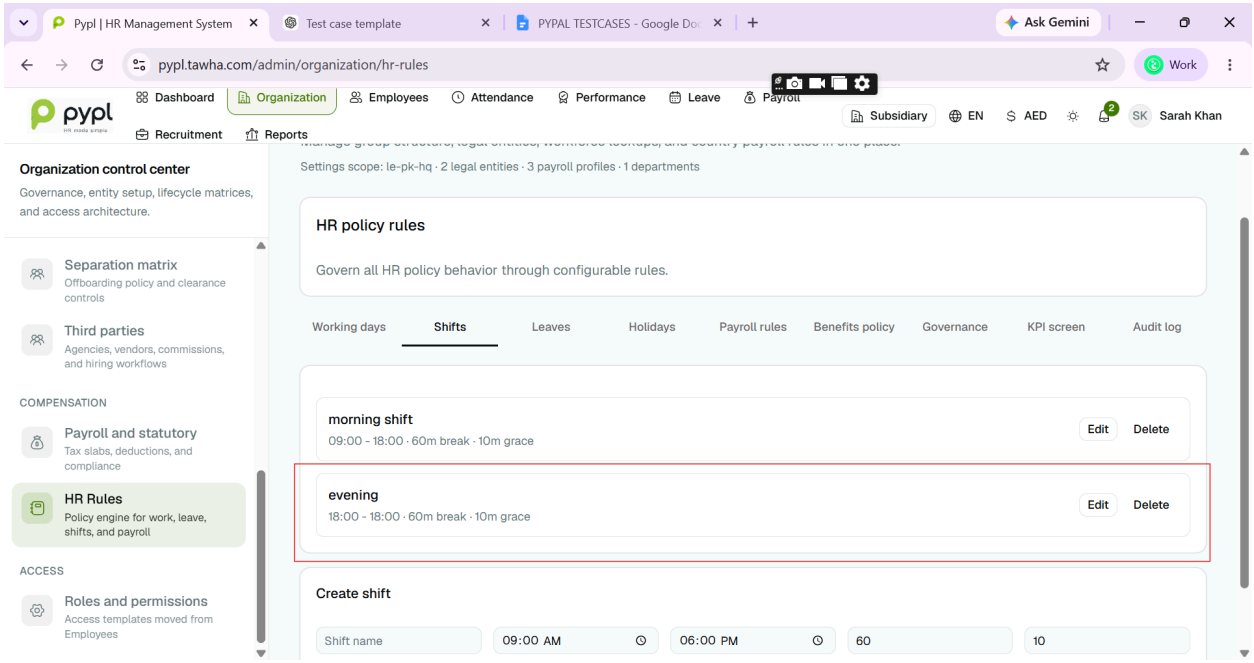
The system saves it successfully.

Expected:
The system must reject the entry because **Start Time and End Time cannot be the same**.

Validation message:

> **Start time and end time cannot be the same.**

This should be a **blocking validation**, so the shift must **not be saved** until the user changes one of the times.



TICKET# 39: fixed

Blocked Ticket: Required Document Missing from Document Type Dropdown

Module: Employees → Employee Profile → Compliance / Employee Documents
Priority: High
Type: Functional Bug

Description:
A compliance error indicates that a required document is missing (`tawha-doctest`), but the corresponding document type is **not available in the Document Type dropdown** when editing the employee's documents. Because of this, the user cannot upload the required document and resolve the compliance blocker.

Steps to Reproduce:

1. Open an employee profile.
2. Navigate to the **Compliance** tab.
3. Observe the **Compliance Issues** section.
4. Verify that a required document error is displayed: **"Required document missing: tawha-doctest."**
5. Click **Update profile & documents** / edit the employee.
6. Navigate to **Employee documents**.

7. Open the **Document Type** dropdown.
8. Search/check for `tawha-doctest`.

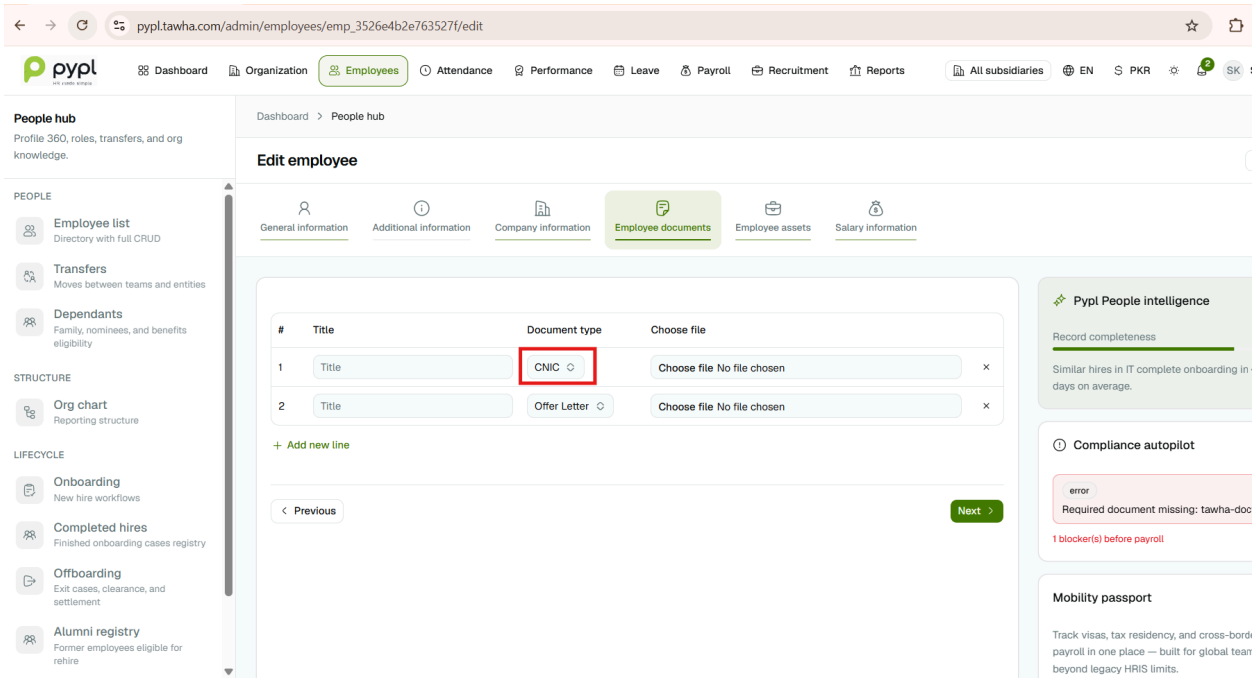
Expected Result:
The required document type **`tawha-doctest`** should be available in the **Document Type** dropdown so the user can select it, upload the document, and resolve the compliance error.

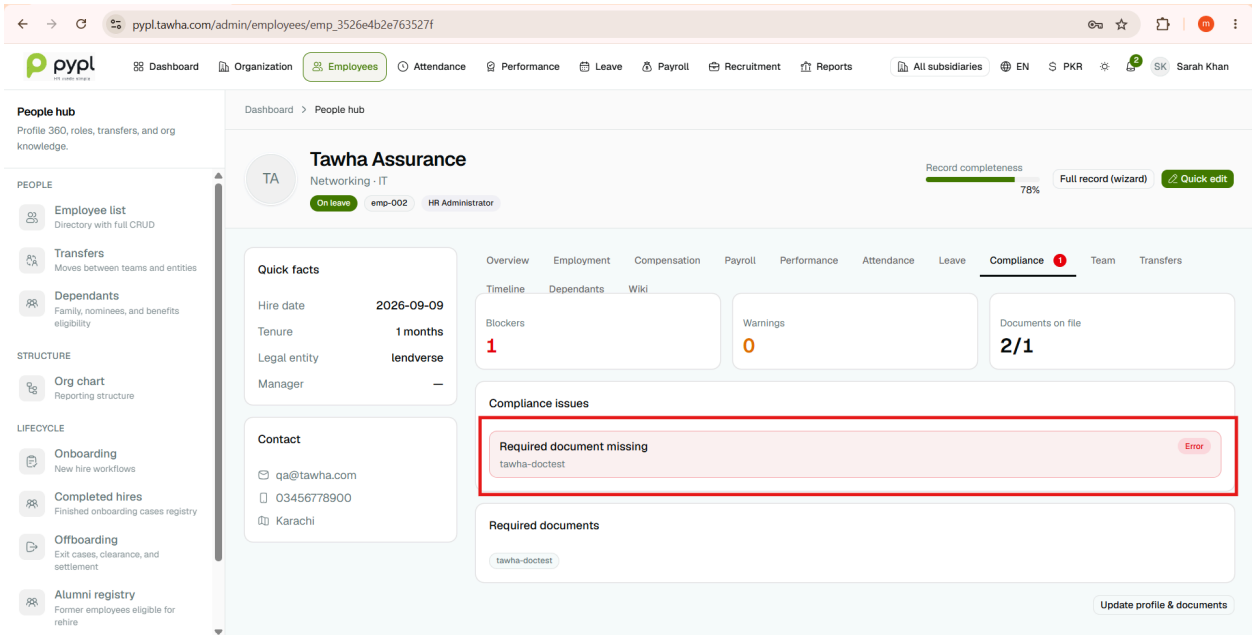
Actual Result:
The compliance section shows `tawha-doctest` as a required missing document, but **`tawha-doctest` is not available in the Document Type dropdown**. Therefore, the compliance blocker cannot be resolved from the employee document section.

Impact:
Users are unable to fulfill required document requirements even though the system identifies the document as mandatory.

Acceptance Criteria:

- All active/assigned required document types must be available in the **Document Type** dropdown.
- The document type shown in the compliance error must match an available document type.
- Once the required document is uploaded, the compliance blocker should be cleared.
- Document types should remain consistent between **Compliance requirements** and **Employee Documents**.





TICKET# 40: (fixed)

Bug Ticket: Active Employee Not Reflected on HR Dashboard

Module: Employees → Employee List / Dashboard
Priority: High
Type: Functional Bug

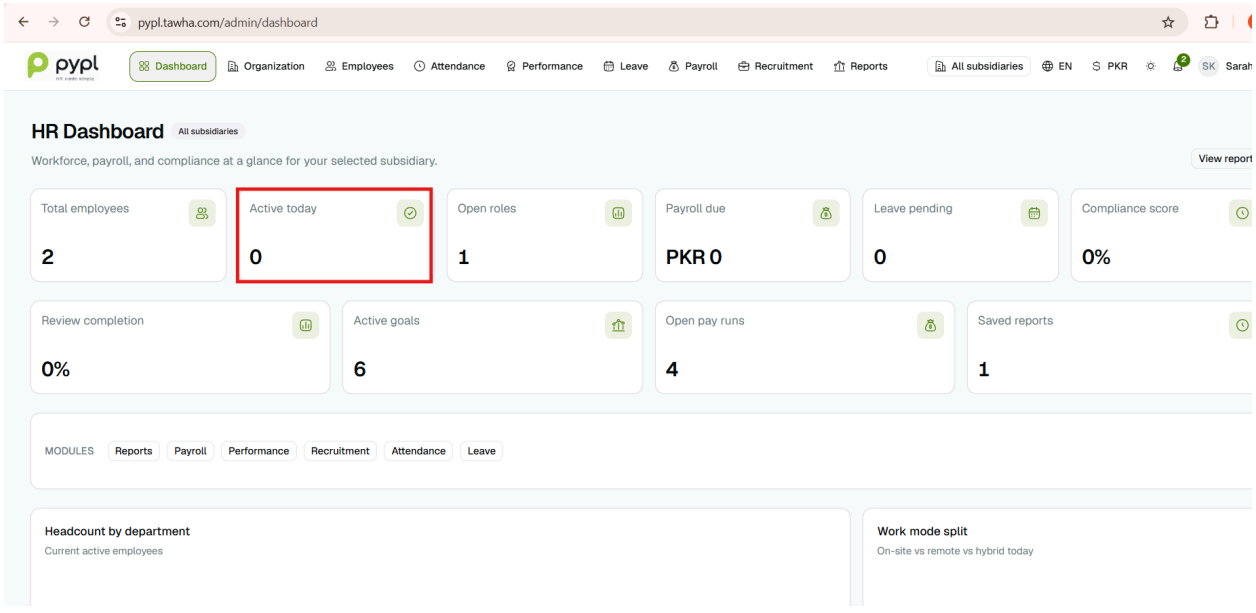
Description:
An employee is shown with **Active** status in the Employee Directory, but the HR Dashboard does not reflect this employee in the **Active today** count.

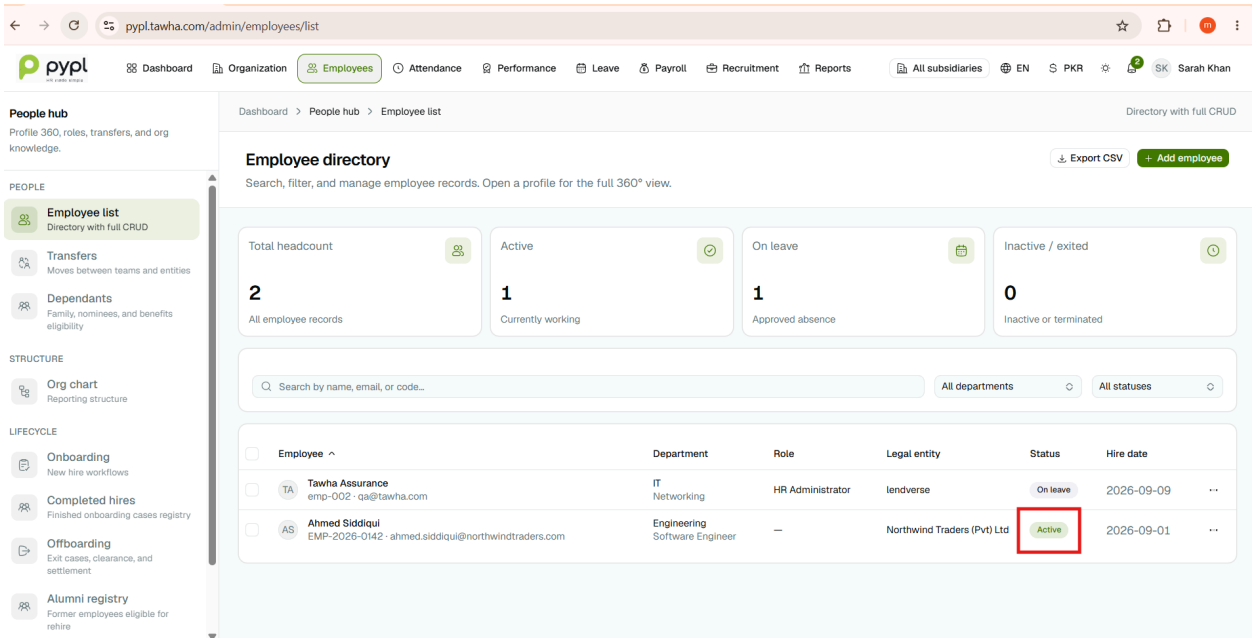
Steps to Reproduce:

1. Navigate to **Employees** → **Employee List**.
2. Verify that an employee has the status **Active**.
3. Navigate to the **Dashboard**.
4. Check the **Active today** metric.

Expected Result:
The **Active today** count should include all employees whose current status is **Active**.

Actual Result:
The Employee Directory shows an employee with **Active** status, but the Dashboard displays **Active today = 0**.





TICKET# 41:

Ticket: Employee Leave Portal – Employee Record Not Found

Title: Employee Leave Portal redirects to “Employee record not found” error

Module: Leave Management → Employee Leave Portal

Issue Type: Bug

Description:
When an HR/Admin user clicks the **“Employee leave portal”** button from the Leave Command Center, the system redirects to the employee leave portal, but instead of displaying the employee's leave information, it shows:

> “We could not find your employee record. Contact HR if this persists.”

The employee already exists in the system and is visible in the **Employee Directory**, so the portal should be able to identify the logged-in employee.

Steps to Reproduce:

1. Login as an employee/admin user.
2. Navigate to **Leave** → **Overview**.
3. Under **Quick actions**, click **Employee leave portal**.

4. Observe the redirected page.

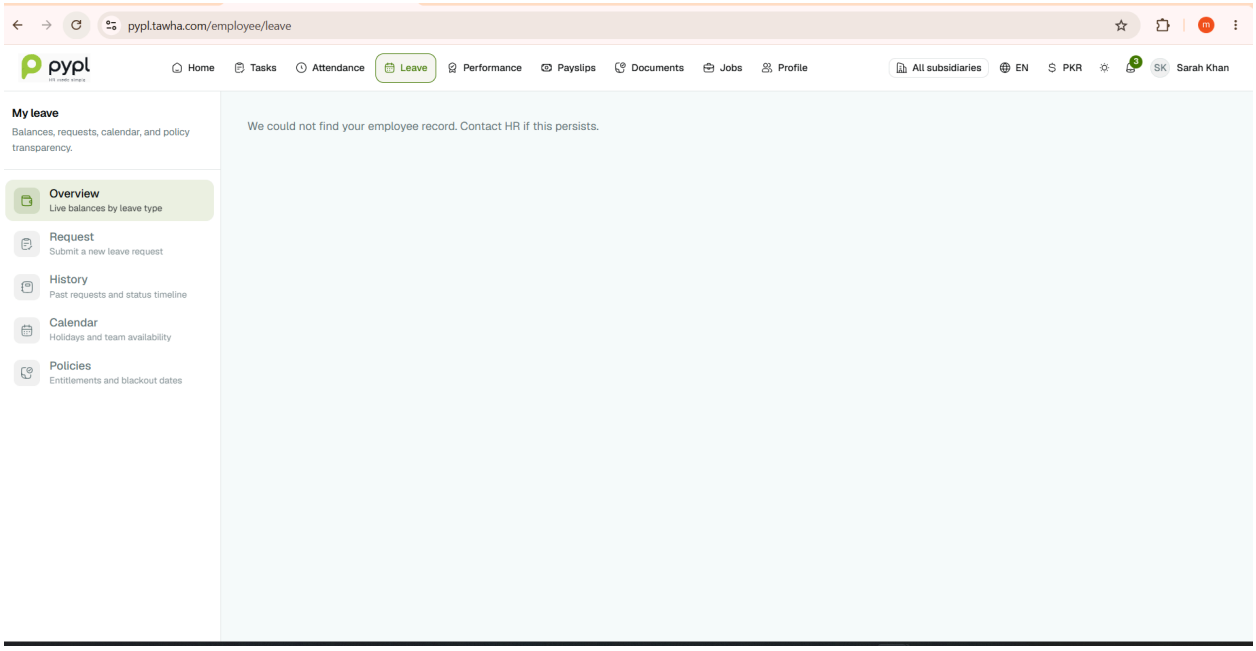
Actual Result:
The leave portal displays **“We could not find your employee record.”**

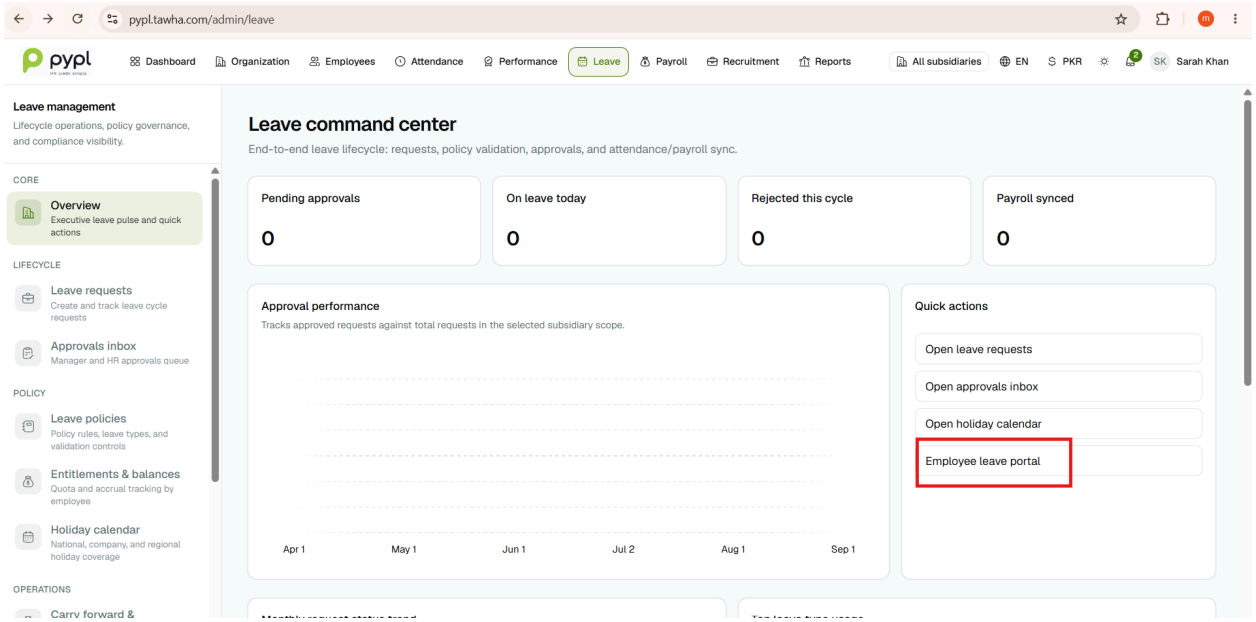
Expected Result:
The system should identify the currently logged-in employee and display their leave portal, including:

- Leave balances
- Leave request option
- Leave history
- Leave calendar
- Applicable leave policies

Likely Cause:
The employee portal may not be correctly mapping the authenticated user/account to the corresponding **employee record/employee ID**.

Priority: 🔴 High
This blocks employees from accessing and managing their leave through the employee portal.





TICKET# 42: not fixed

Ticket: Leave Type Dropdown Not Displaying Options

Title: Leave Type dropdown is not displaying/selecting any options

Module: Leave Management → Leave Requests

Issue Type: Bug

Description:
The **Leave Type** dropdown is not functioning correctly. When the user clicks the dropdown, no leave types/options are displayed, so the user cannot select a leave type.

Steps to Reproduce:

1. Go to **Leave Management**.
2. Open **Leave Requests**.
3. Start creating a new leave request.
4. Click on the **Leave Type** dropdown.
5. Observe the dropdown.

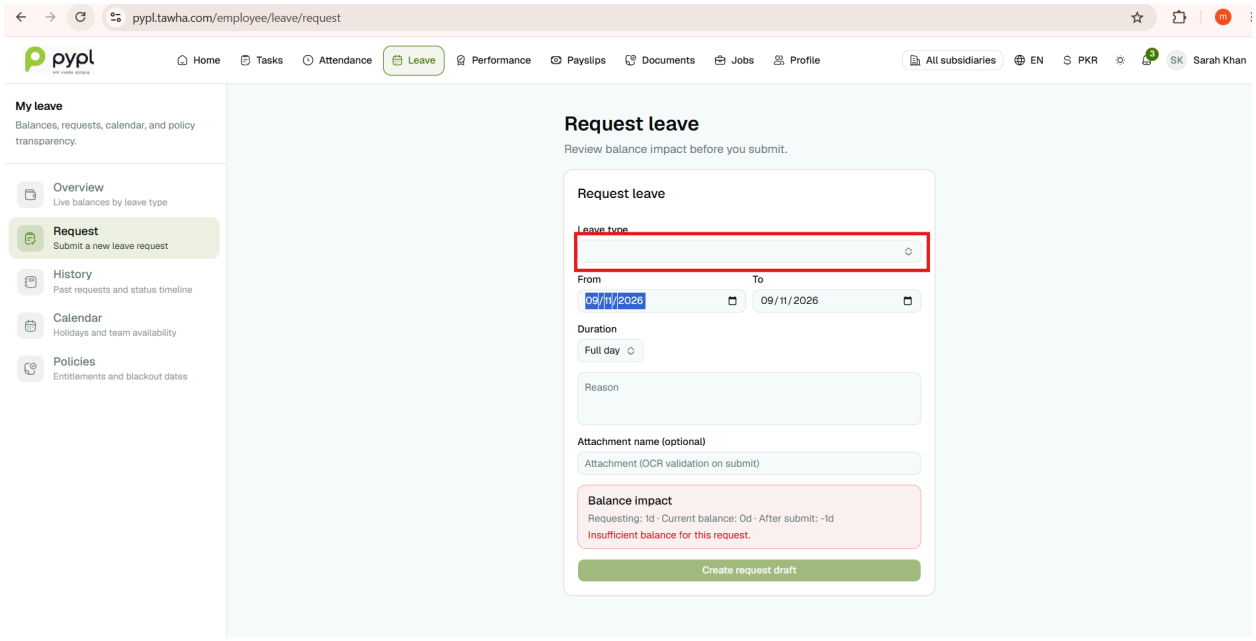
Actual Result:
The dropdown opens but **no leave type options are displayed**, preventing the user from selecting a leave type.

Expected Result:
The dropdown should display all configured/available leave types, for example:

- Annual Leave
- Sick Leave
- Casual Leave
- Unpaid Leave
- Maternity/Paternity Leave
- Other configured leave types

The user should be able to select one option and continue submitting the leave request.

Impact: 🔴 High
Employees cannot create a leave request because selecting a leave type is a required step.



TICKET# 43: (fixed)

Ticket: Duplicate Employee Details Navigation

Title: “Full record (wizard)” and “Update profile & documents” buttons have the same functionality

Module: Employees → Employee Profile

Issue Type: UX / Functional Bug

Description:
On the employee profile page, there are two separate actions:

1. **Full record (wizard)** — top-right button
2. **Update profile & documents** — bottom-right button under the Compliance section

Currently, clicking **either button redirects to the same employee details/edit page**, resulting in duplicate functionality.

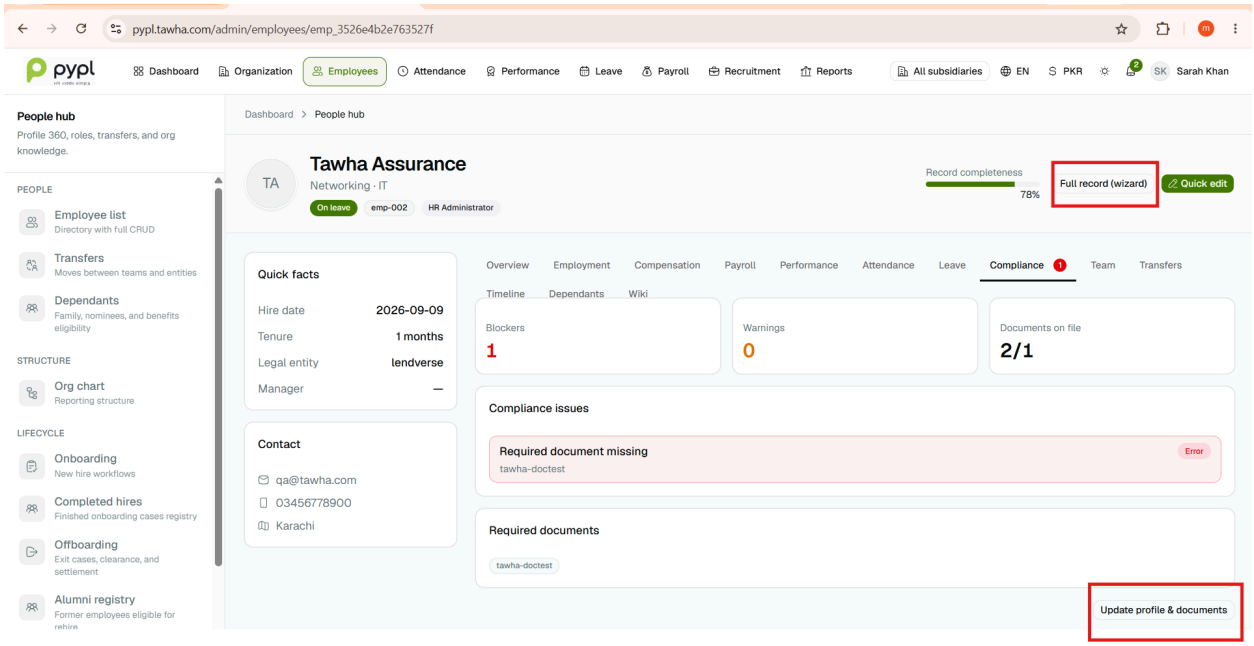
Actual Result:
Both **"Full record (wizard)"** and **"Update profile & documents"** open the same employee details/edit flow.

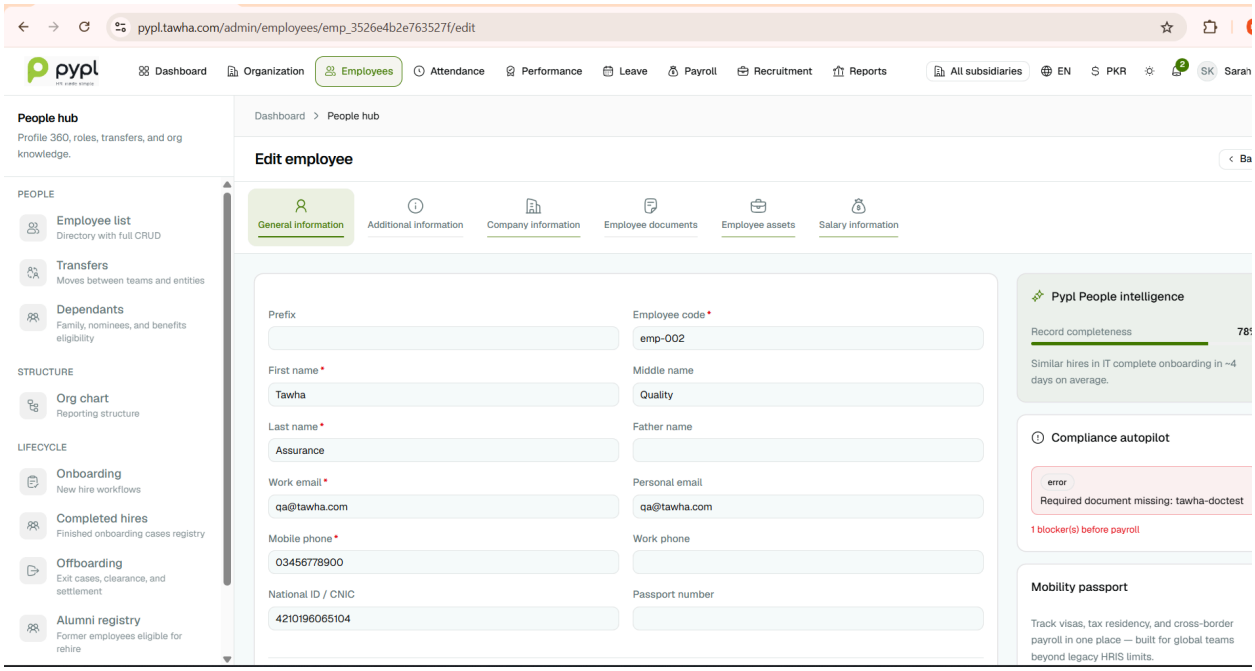
Expected Result:
The two buttons should have **different, clearly defined purposes**:

- **Full record (wizard):** Should open the complete employee record wizard, allowing HR to review/update all employee information across the complete onboarding/profile workflow.
- **Update profile & documents:** Should take the user directly to the relevant **profile/document update section**, particularly when resolving the compliance issue shown on the page.

Alternatively, if both actions are intentionally meant to perform the same function, **one of the buttons should be removed** to avoid redundancy and user confusion.

Impact: 🟡 Medium





TICKET# 44: (Fixed)

Dashboard Not Updating Based on Selected Subsidiary Currency

Title: Dashboard shows default PKR values after switching subsidiary to AED

Module: HR Dashboard / Subsidiary Management

Priority: High
Type: Bug

Description

When the user switches the selected subsidiary from the default subsidiary to **Tawha Technologies UAE**, which uses **AED**, the dashboard continues displaying the default dashboard values and currency in **PKR**.

The subsidiary selector changes successfully to **Tawha Technologies UAE**, but the dashboard data does not appear to refresh according to the selected subsidiary.

Steps to Reproduce

1. Go to **Admin → Dashboard**.
2. Observe the current subsidiary and dashboard values.
3. Open the subsidiary selector in the top-right.
4. Select **Tawha Technologies UAE**.
5. Observe the dashboard.

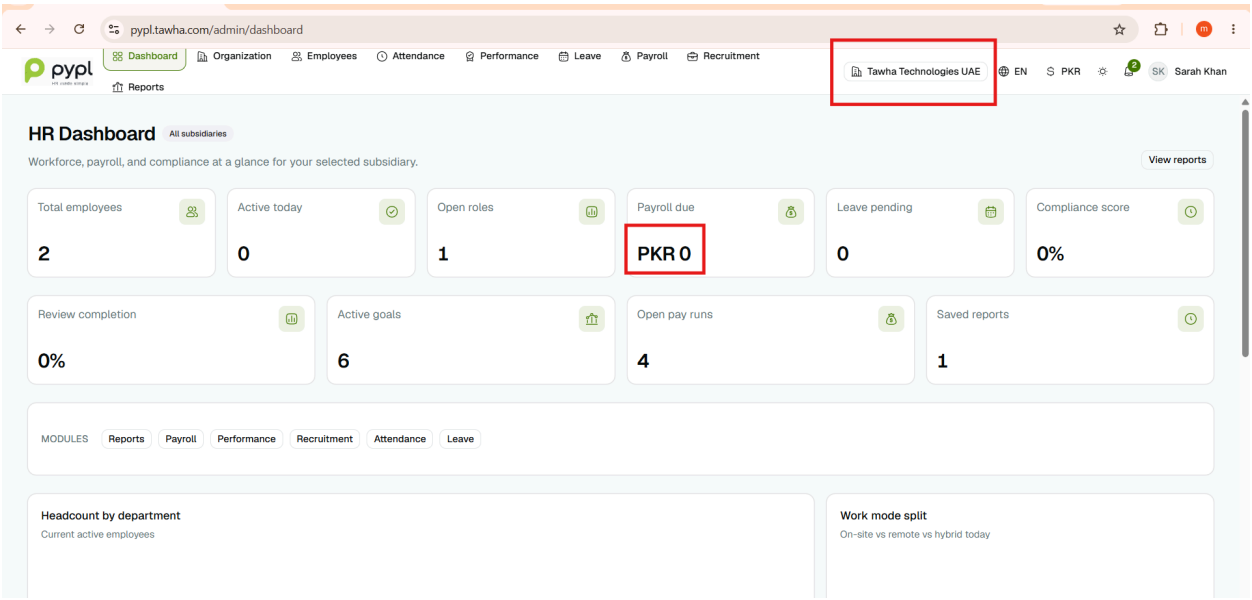
Actual Result

- Subsidiary selector shows **Tawha Technologies UAE**.
- Currency indicator still shows **PKR**.
- **Payroll Due** still displays `PKR 0`.
- Other dashboard values remain the same as the previous/default subsidiary.
- Dashboard does not appear to reload/filter data based on the selected subsidiary.

Expected Result

After selecting **Tawha Technologies UAE**:

- Dashboard should refresh using the UAE subsidiary's data.
- Currency should change from **PKR → AED**.
- Payroll-related amounts should be displayed in **AED**.
- Employee counts, open roles, leave, compliance, payroll, goals, etc. should be calculated **only for the selected subsidiary**.
- Switching back to another subsidiary should restore that subsidiary's corresponding currency and data.



TICKET# 45:

🎫 Ticket: Pypl AI Missing From Onboarding Pages

Title: Pypl AI assistant should be available on every page

Module: Global UI / Pypl AI

Priority: High
Type: Bug / Feature consistency

Description

The **Pypl AI** assistant is not visible on the **Initiate Onboarding Case** pages.

As shown in the screenshot, the onboarding flow has the normal navigation and content, but there is **no Pypl AI assistant/widget** available.

Since Pypl AI is intended to be a global HR assistant, it should be accessible consistently across the application rather than only on selected pages.

Steps to Reproduce

1. Go to **Employees** → **Onboarding**.
2. Click **Initiate onboarding case**.
3. Navigate through the onboarding steps:
    - Case setup
    - Start dates
    - Preboarding
    - GCC compliance
    - Review
4. Check the page for the Pypl AI assistant.

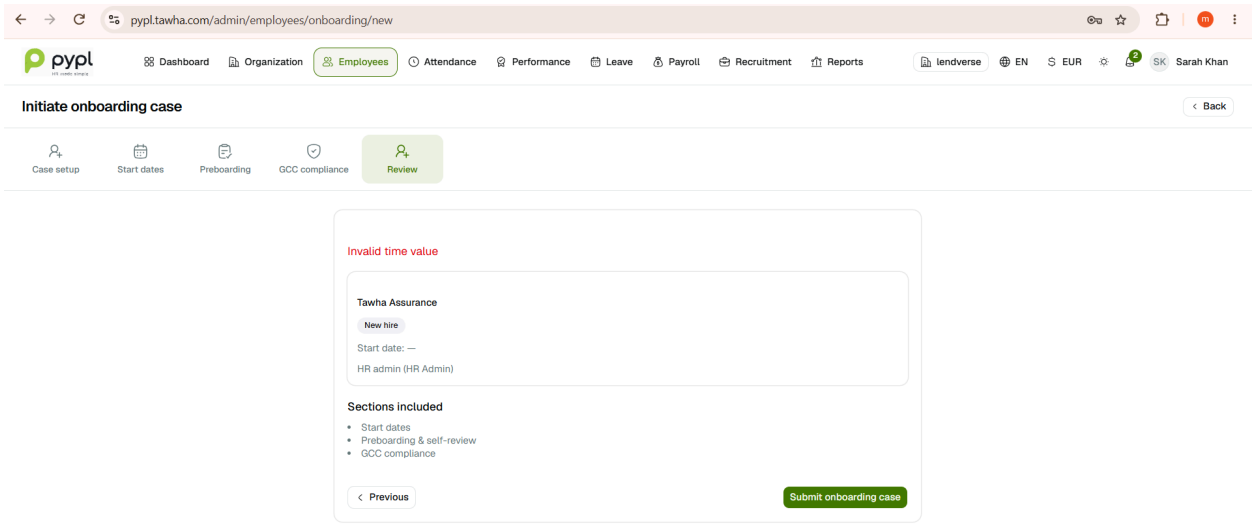
Actual Result

Pypl AI is missing from the onboarding pages.

Expected Result

Pypl AI should be available on every page of the Pypl application, including:

- Dashboard
- Organization
- Employees
- Employee details
- Employee edit/wizard
- Onboarding
- Attendance
- Performance
- Leave
- Payroll
- Recruitment
- Reports
- All onboarding wizard steps
- Other relevant admin and employee pages



TICKET# 46: not fixed

Ticket: Employee Hierarchy Movement

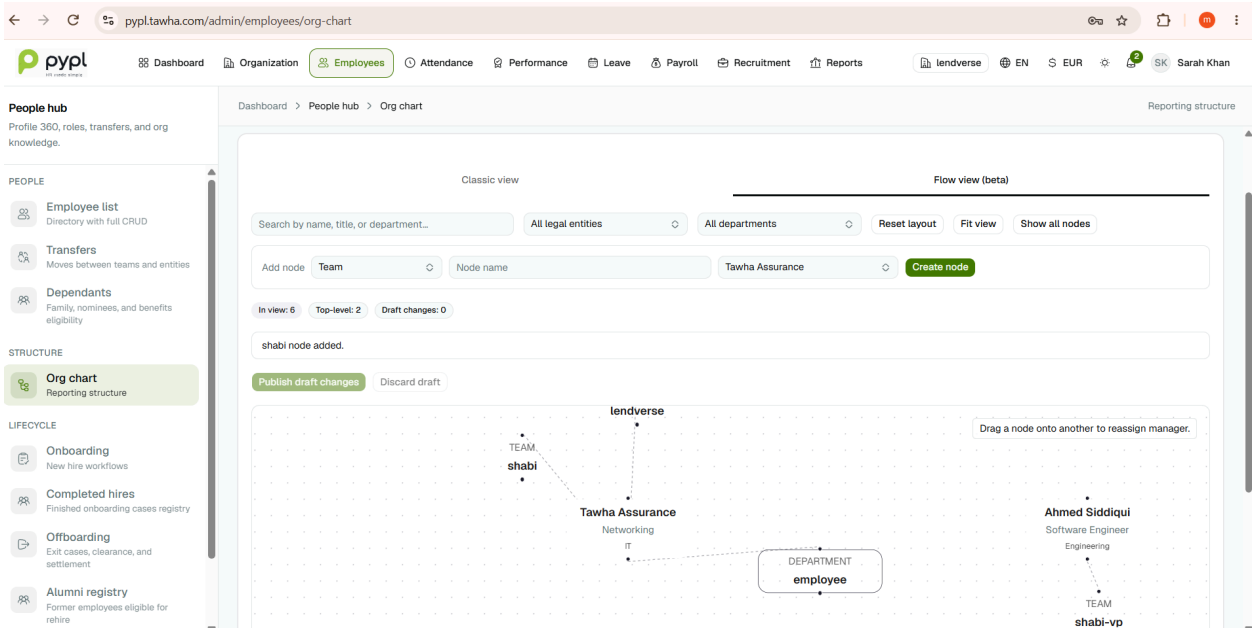
Description:
When an employee is moved in the Org Chart, the complete hierarchy should move/update accordingly.

Expected Flow:

Organization → Department → Team → Employee → Project

When **Tawha Assurance** is moved to another department/team, all related employee flows and associations should automatically update with the new position.

Expected Result:
The employee should not remain connected to the old department/team/project after the move, and all related modules should reflect the new organizational position.



TICKET# 47: not fixed

Ticket: Add AI Agent for Org Chart

Requirement:
Add an **AI Agent** tool to the Org Chart page that allows HR admins to describe an organizational structure using a prompt. The AI should automatically generate the corresponding flow chart with the required nodes and relationships.

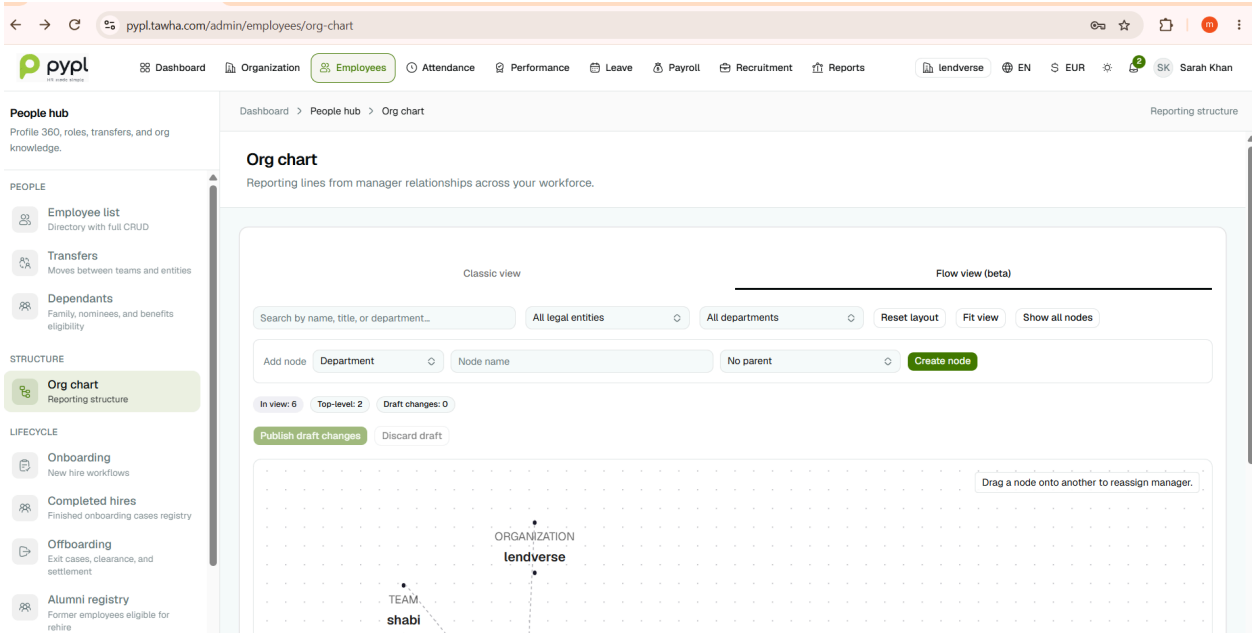
Example prompt:

> "Create Tawha Assurance with IT department, Networking team, Ahmed as Software Engineer, and assign him to the Web Development project."

Expected behavior:

- Add an **AI Agent** button/input on the Org Chart page.
- Admin enters a natural-language prompt.
- AI interprets the requested structure.
- Automatically creates the required **Organization → Department → Team → Employee → Project** nodes.
- Automatically establishes the correct parent/child relationships.
- Generated changes should appear as **draft changes** first.
- Admin can review, edit, discard, or **Publish draft changes**.

Acceptance criteria:
AI-generated nodes and connections must be displayed correctly in the flow chart without requiring the admin to manually create each node.



TICKET# 48:

Ticket: Dependent Name & CNIC Fields Saving Issue

On the **Edit Dependent** form, the **Name** and **CNIC / ID** fields are not saving correctly.

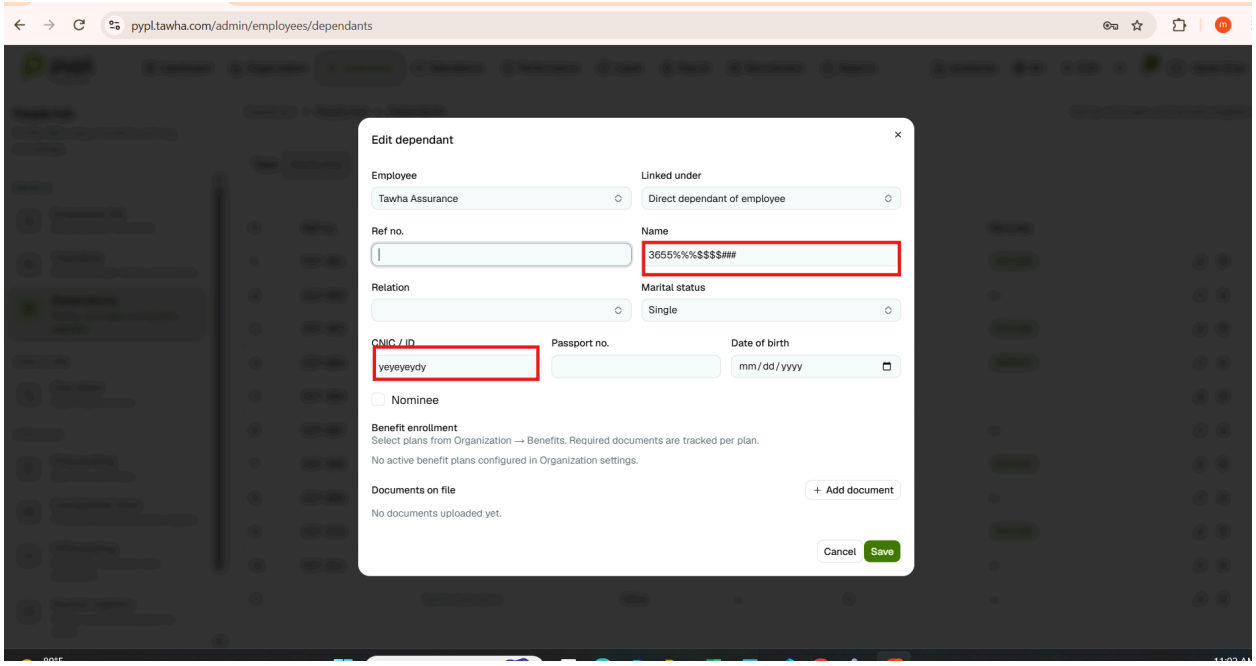
Issue:

- Enter a value in the **Name** field → save → value is not retained correctly.
- Enter a value in the **CNIC / ID** field → save → value is not retained correctly.

Expected:

- Name should save exactly as entered.
- CNIC / ID should save exactly as entered.
- When reopening **Edit dependent**, both values should be displayed correctly.
- Existing dependent records should also retain their previously saved values.

Priority: Medium
Module: Employees → Dependants



TICKET# 49:

Ticket: Add Validation for Dependent Form

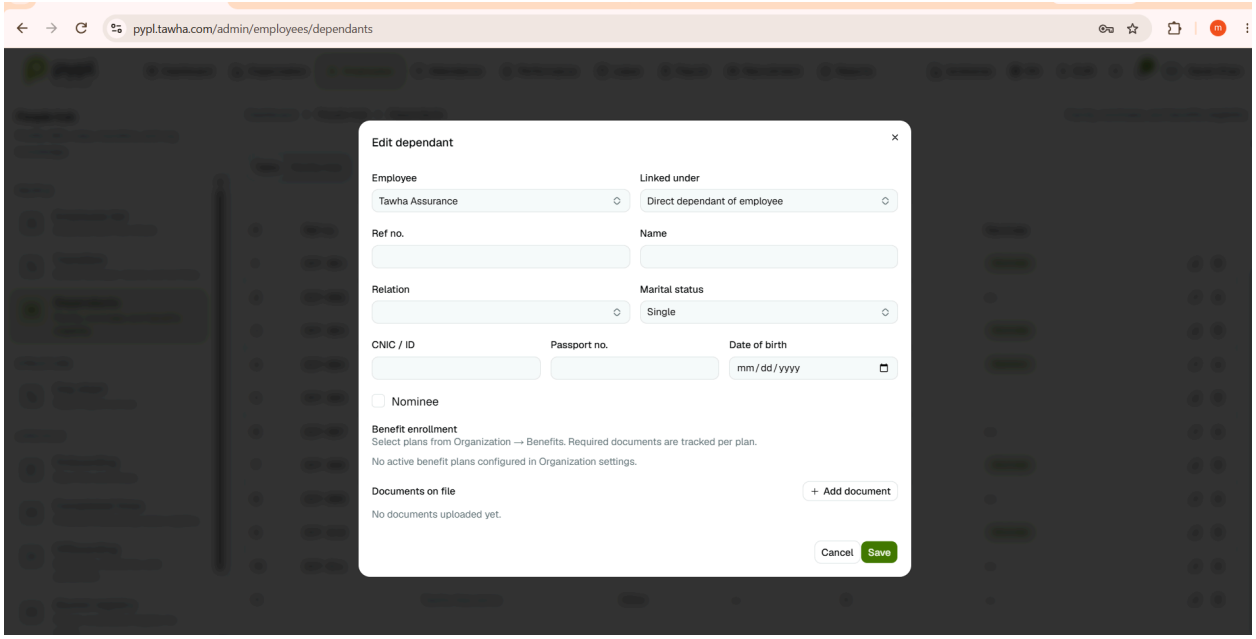
Priority: High 🔴
Module: Employees → Dependants → Add/Edit Dependent

Issue:
When clicking **Save** with required fields empty, the dependent record is saved without showing any validation message.

Expected behavior:

- Required fields must be validated before saving.
- If any required field is empty, the record should **not be saved**.
- Show a clear validation message such as **"This field is required."** below the relevant field.
- Highlight the incomplete fields.
- Save should only work once all required fields are completed.

Required fields:
Employee, Ref No., Name, Relation, Marital Status, CNIC/ID or Passport No., Date of Birth, and any other fields configured as required.



TICKET# 50: (fixed)

Ticket: Duplicate Ref. No. Allowed for Dependents

Priority: High 🔴
Severity: Major
Module: Employees → Dependants

Issue:
The system allows multiple dependents to be created with the same **Ref. No.** For example, `DEP-002` is already assigned to **Hassan Khan**, but another dependent **Fatima Ali** has also been saved with `DEP-002`.

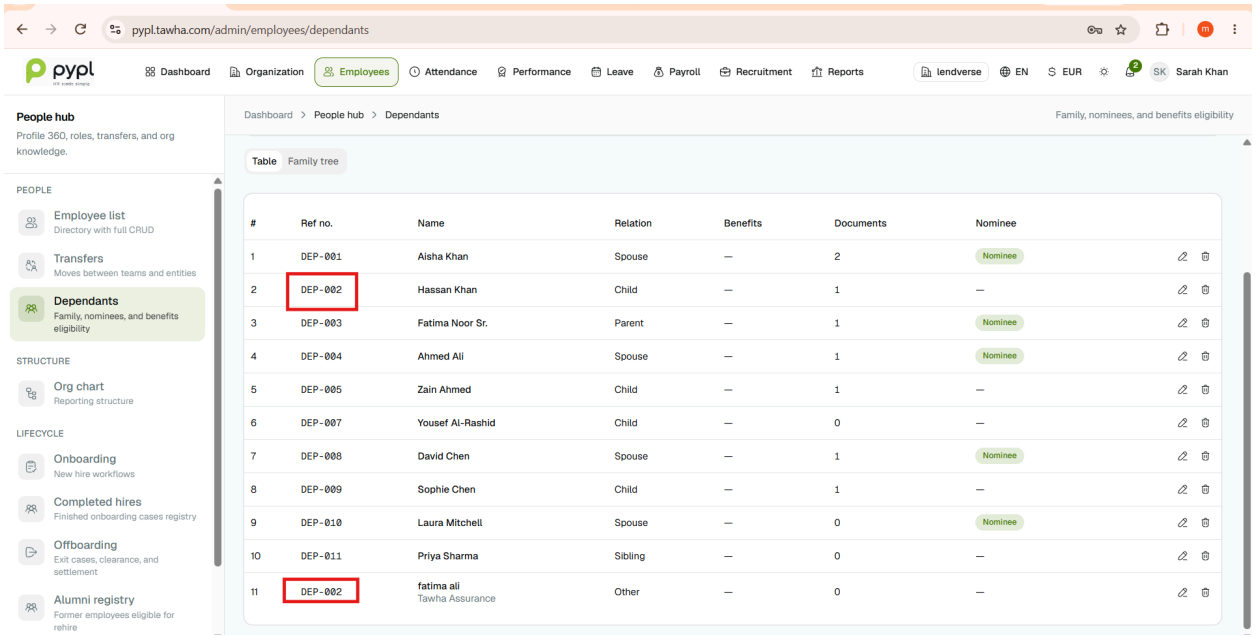
Expected behavior:

- **Ref. No. must be unique** across all dependent records.
- The system should validate the Ref. No. when creating or editing a dependent.
- If an existing Ref. No. is entered, the record should **not be saved**.
- Display a clear validation message, e.g.:
  “Ref. No. already exists. Please enter a unique Ref. No.”

- Uniqueness validation should work on both **Add** and **Edit**.
- When editing an existing dependent, its **own current Ref. No.** should remain valid; the system should only reject it if it is changed to another dependent's Ref. No.
- Validation should ideally happen both **on the frontend and backend/database level** to prevent duplicate records through API requests.

Current example:

Ref. No.	Dependent
DEP-002	Hassan Khan
DEP-002	Fatima Ali ❌



TICKET# 51: not fixed

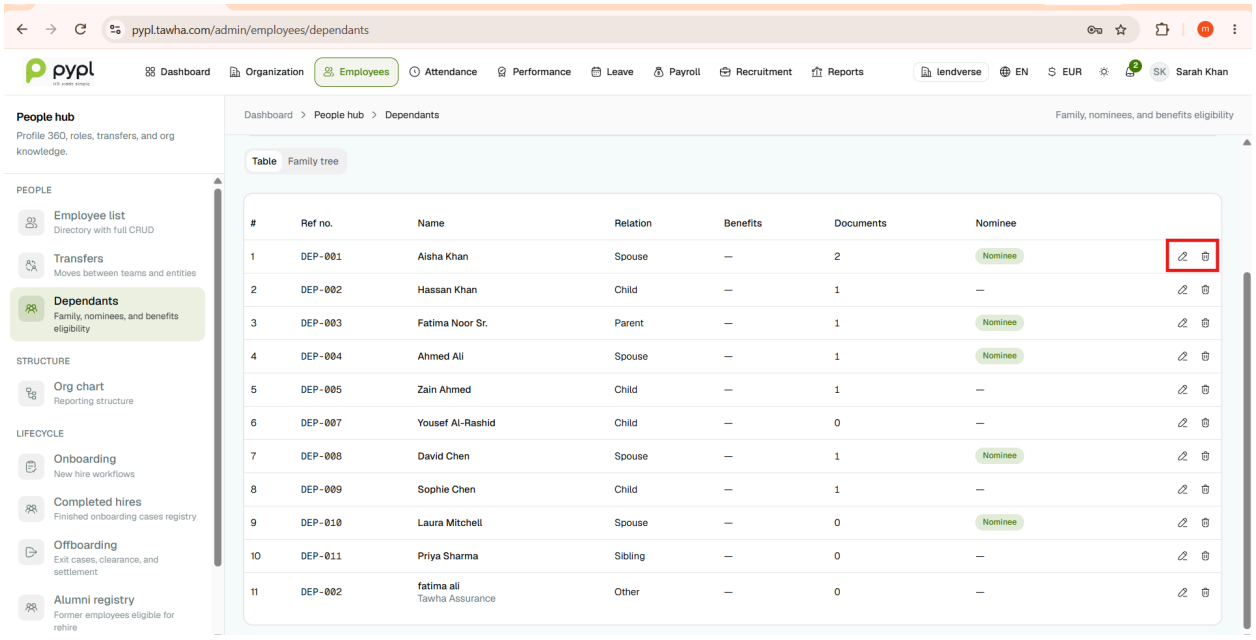
Ticket: Add Edit/Delete Tooltips for Dependants

Priority: Medium

Description:
On the **Dependants** table, add a toggle/control to enable or disable the **Edit** and **Delete** actions for each dependant record. Add clear tooltips to the action icons so users can understand their purpose.

Expected Behavior:

- Add an **Edit/Delete action toggle** for dependant records.
- When enabled, the **Edit** ✏️ and **Delete** 🗑️ icons should be visible and clickable.
- When disabled, both actions should be hidden or disabled.
- Add a tooltip on the **Edit** icon displaying **"Edit"** on hover.
- Add a tooltip on the **Delete** icon displaying **"Delete"** on hover.
- The toggle should apply consistently to all dependant records.
- Clicking **Delete** should display a confirmation before permanently removing the record.
- Changes to the toggle should persist after page refresh.
- Tooltips should appear consistently whenever the user hovers over the respective action icons.



TICKET# 52: (fixed)

Ticket: Edit/Delete Icons Enablement Issue

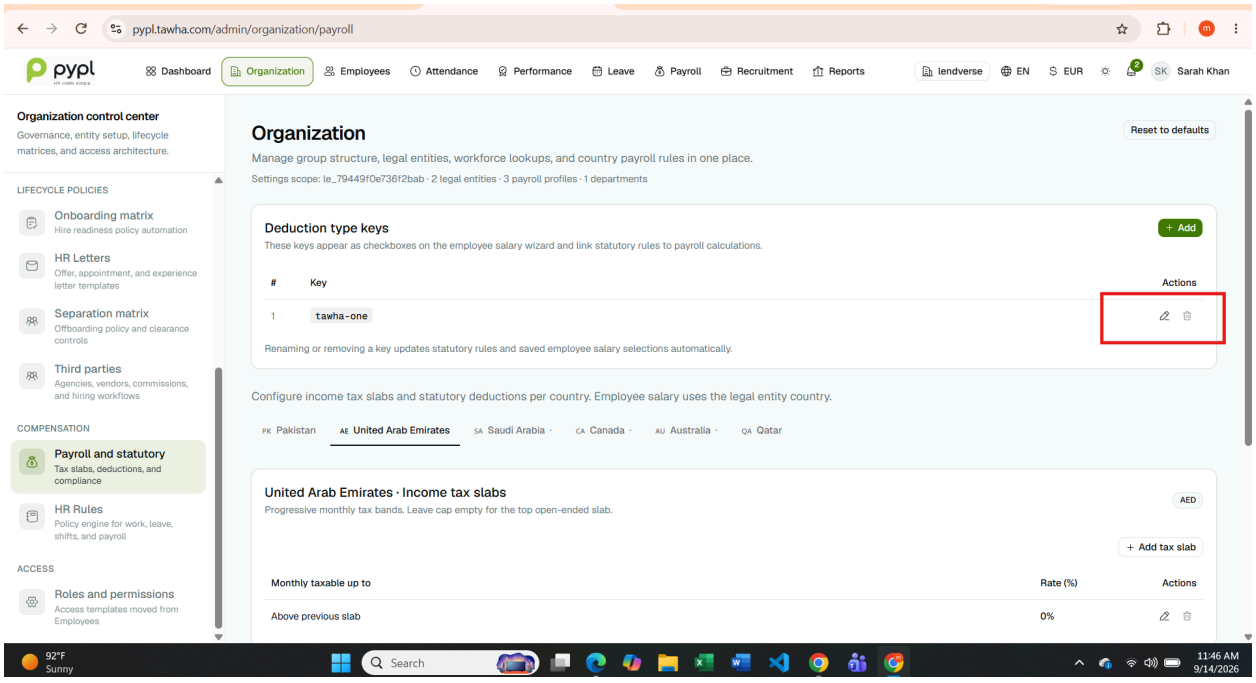
Priority: Medium

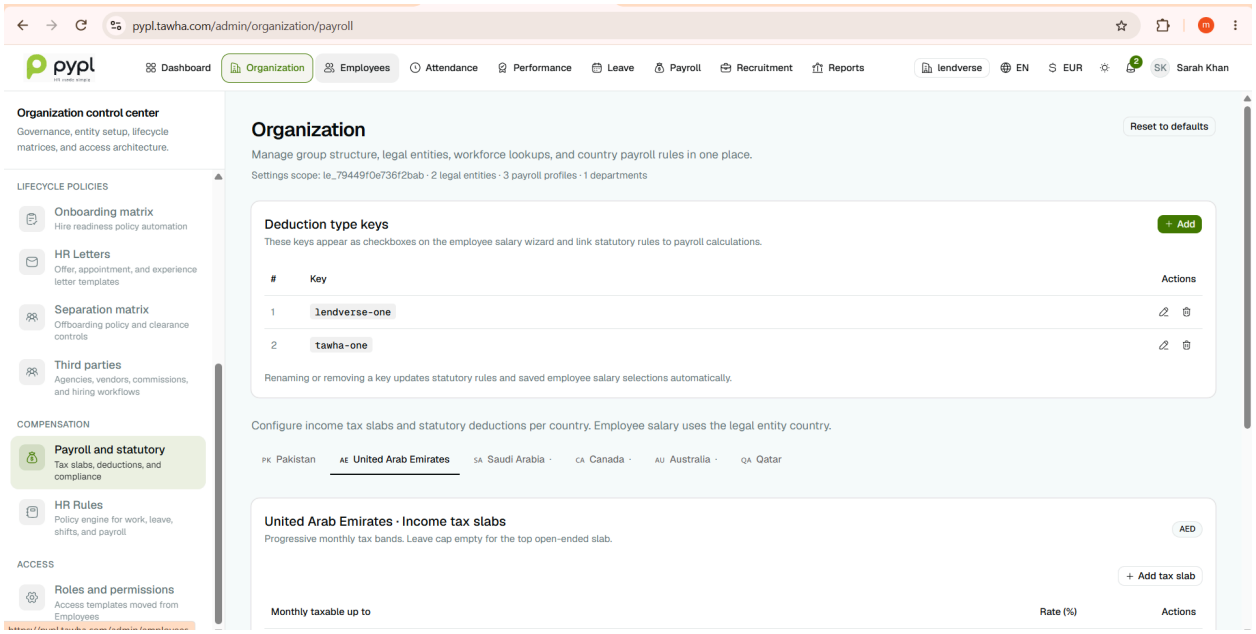
Issue:
On the **Organization → Payroll & Statutory** page, when a new deduction type key is added, the **Delete icon is enabled**. However, after deleting an item, the **Delete icon becomes disabled**. There is currently no toggle to control the enabled/disabled state of these action icons.

Required:
Add a toggle for the **Edit and Delete icons** so their enabled/disabled state can be controlled properly based on the record/action state.

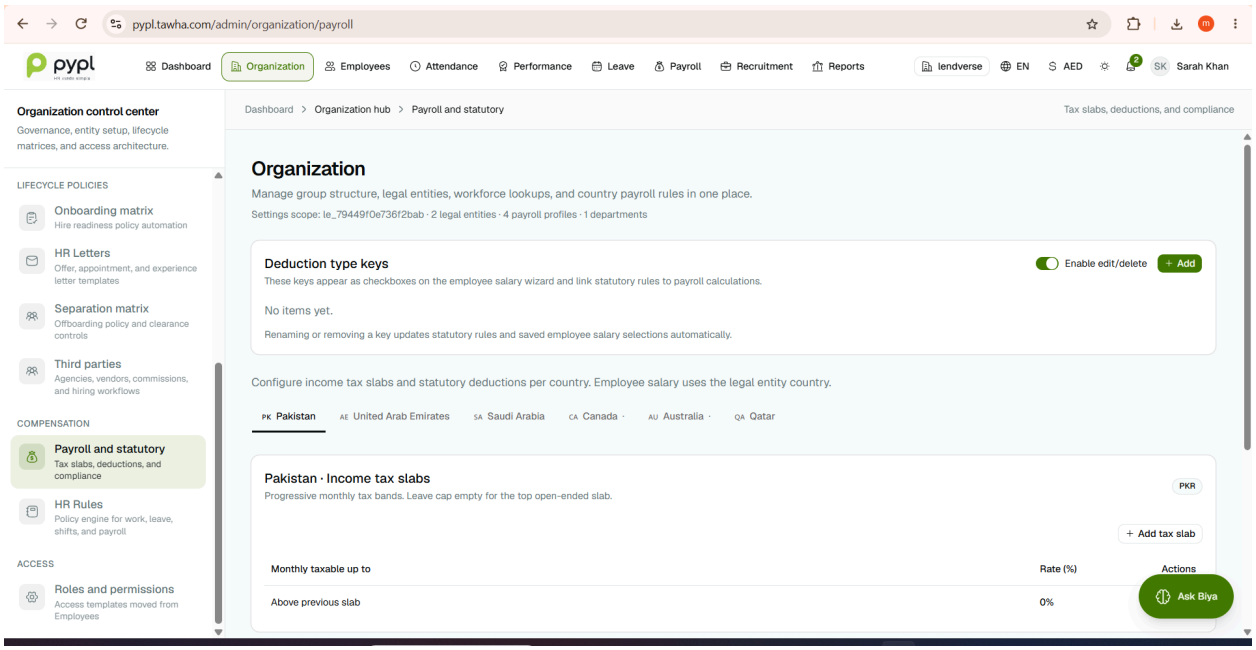
Expected:

- Newly added record → **Edit + Delete enabled**
- Deleted record → **Edit + Delete disabled**
- Toggle should control the action state consistently.





Fixed ss:



TICKET# 53: (fixed)

Ticket: Payroll Country Tabs Not Working

Priority: High

Module: Organization → Payroll & Statutory

Issue:
On the Payroll & Statutory page, the **Pakistan, UAE, and Qatar** country tabs are working correctly. However, clicking on the **Saudi Arabia, Canada, and Australia** tabs does not switch the content or load their respective payroll settings.

Expected Result:
Clicking any country tab should successfully select the country and display its respective:

- Income tax slabs
- Statutory deductions
- Payroll configuration

Affected Tabs:

- ❌ Saudi Arabia
- ❌ Canada
- ❌ Australia
- ✅ Pakistan
- ✅ UAE
- ✅ Qatar

https://drive.google.com/file/d/1n6vo457y8wb1zpAk582WFdvLanbk8wlo/view?usp=drive_link

TICKET# 54: (fixed)

Ticket: HR Documents – Heading and Table Text Same Font Size

Priority: Low
Module: Employees → Documents

Issue:
On the **HR Documents** page, the table heading and the content/field text are displayed with the **same font size**, making the table hierarchy unclear.

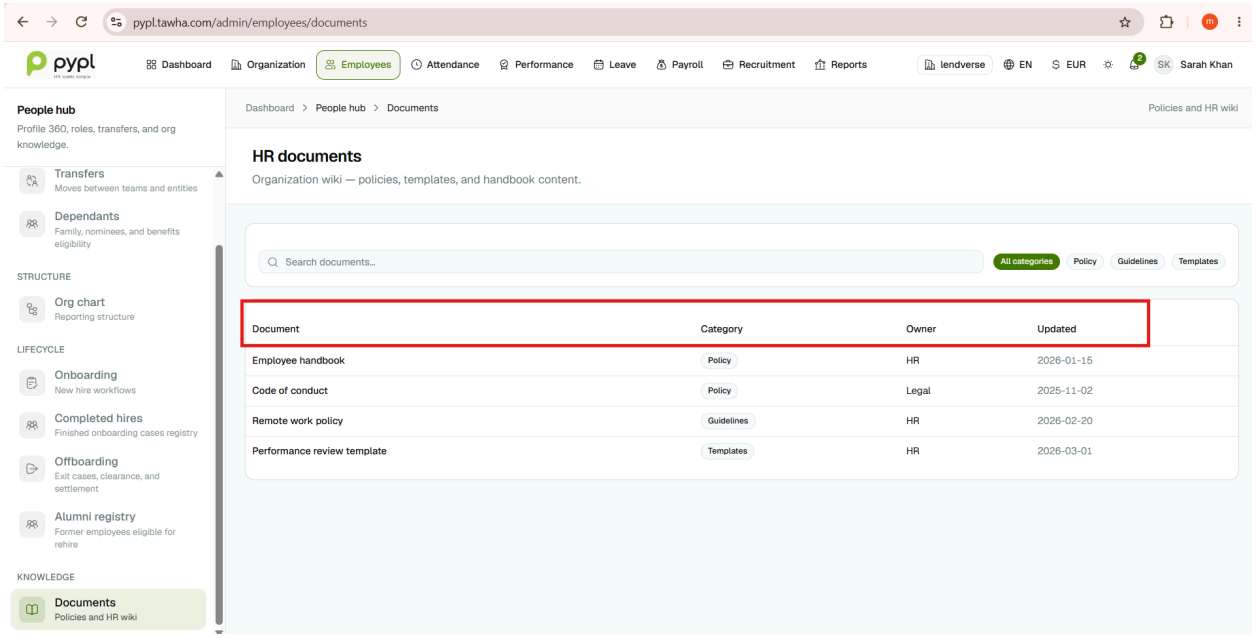
Expected Result:

- Table headings (**Document, Category, Owner, Updated**) should have a **slightly larger/bolder font** than the table data.

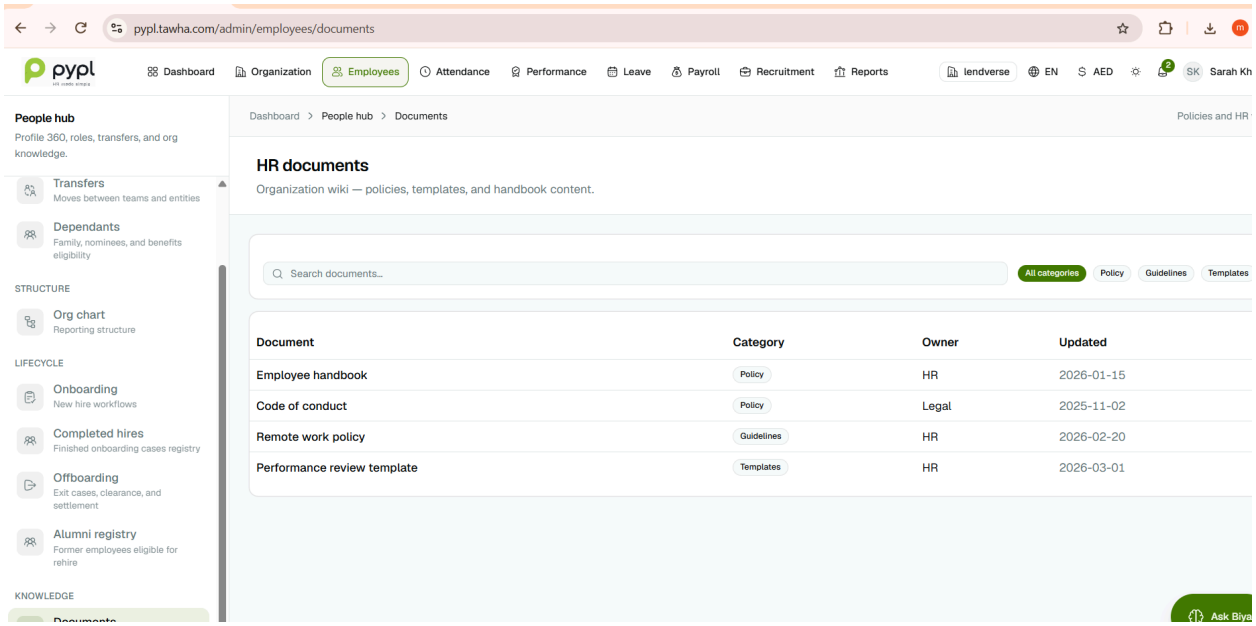
- Table data should use a smaller, regular-weight font.
- Maintain consistent typography and visual hierarchy across the table.

Acceptance Criteria:

- Table headings are visually distinguishable from table data.
- Heading font size/weight is greater than the field values.
- All table columns follow the same typography hierarchy.
- No other table layout or functionality is affected.



Fixed ss:



TICKET# 55: not fixed

Ticket: Biya AI Report Agent – UI Overlapping and Content Cutoff

Priority: High
Module: Reports → Biya AI Report Agent

Issue:
The Biya AI Report Agent side panel has multiple UI layout issues:

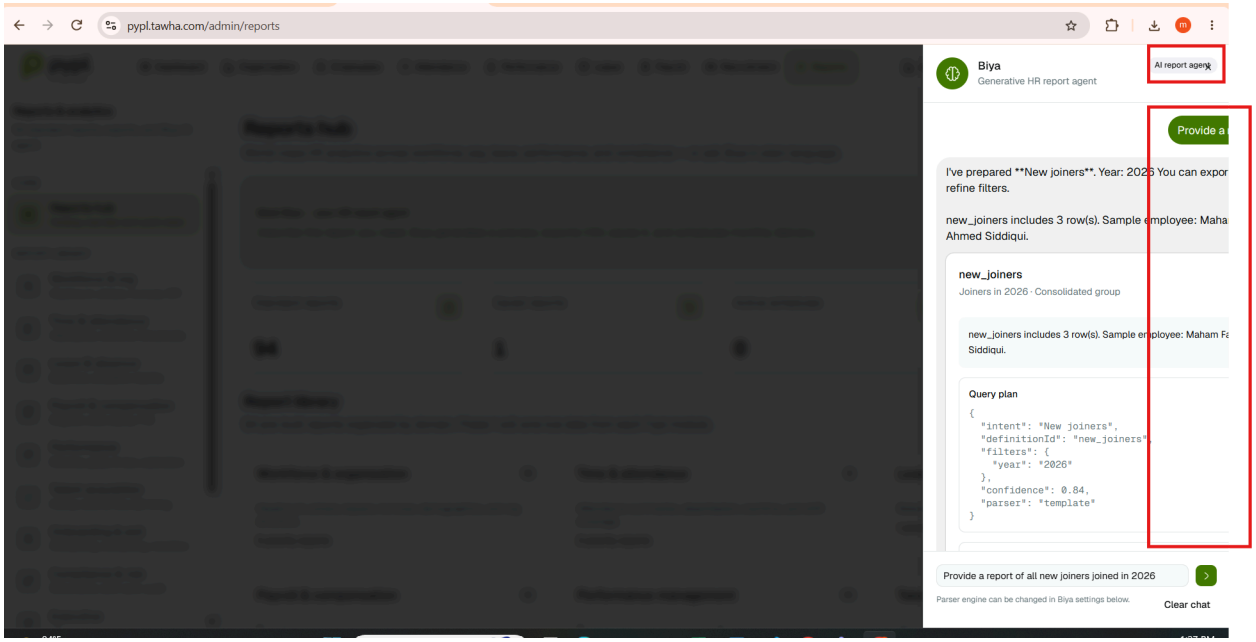
- The **Close (X)** button and **"Ask Biya"** button are overlapping.
- The **"Provide a report…"** input/button area is getting cut off on the right side.
- The report/response content inside the panel is also being **cut off horizontally**, making some text and information unreadable.
- The panel content is not properly fitting within the available width.

Expected Result:

- Close (X) and Ask Biya controls should have proper spacing and should not overlap.
- The **"Provide a report…"** input should be fully visible.
- All AI-generated report content should wrap within the panel.
- No text, buttons, or controls should be clipped.
- The side panel should remain responsive at different screen sizes.

Acceptance Criteria:

- X button and Ask Biya button do not overlap.
- Input field and submit button are fully visible.
- AI response text wraps correctly.
- No horizontal content cutoff.
- Panel works correctly on different screen resolutions.



TICKET# 56: (fixed)

Ticket: Export as PDF – Generated PDF fails to load

Module: Reports → AI Report Agent
Priority: High
Type: Bug

Description:
When the user clicks **Export as PDF** from the AI Report Agent, the PDF file is downloaded successfully. However, when the downloaded PDF is opened, the browser displays **"Failed to load PDF document"**, so the report cannot be viewed.

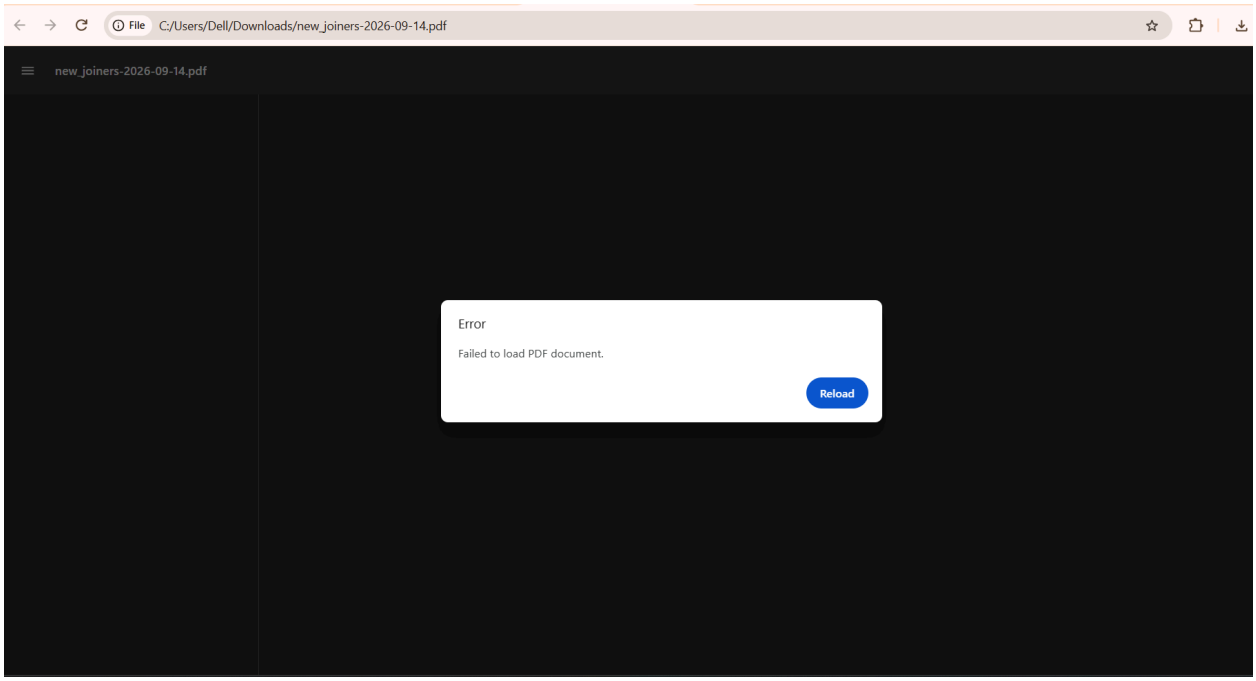
Steps to Reproduce:

1. Go to **Reports**.
2. Open the **AI Report Agent**.
3. Generate a report.
4. Click **Export as PDF**.
5. Open the downloaded PDF file.
6. Observe the error.

Actual Result:
The PDF opens with an error message: **“Failed to load PDF document.”**

Expected Result:
The exported PDF should open successfully and display the complete generated report without any errors.

Priority: 🔴 High



TICKET# 57:not fixed

Ticket: AI Report Agent – Irrelevant queries return HR employee data

Module: Reports → AI Report Agent
Priority: High
Type: Bug

Description:
When a user enters a query that is **unrelated to HR**, such as *"beauty products"*, the AI Report Agent incorrectly matches the query to an HR report such as `employee_directory` and displays employee information.

Since this application is an **HRM management system**, the AI agent should only process queries related to the data and functionality available within the HRM system.

Steps to Reproduce:

1. Go to **Reports**.
2. Open **AI Report Agent (BiYa)**.
3. Enter an unrelated query, e.g.:

   "Tell me about beauty products."

4. Submit the query.

Actual Result:
The agent returns the `employee_directory` report and displays employee-related information.

Expected Result:
The agent should recognize that the query is outside the system's scope and respond appropriately, for example:

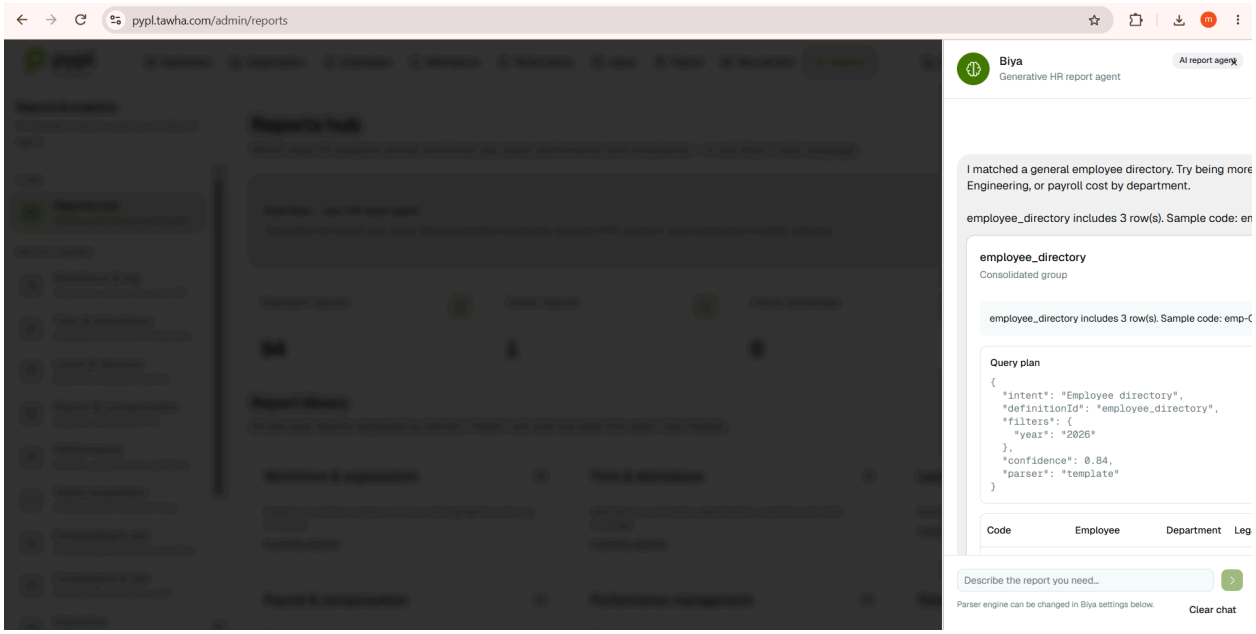
> **"I can only help with HR-related reports and information available in this system. Please ask about employees, attendance, payroll, leave, performance, recruitment, or other HR data."**

Acceptance Criteria

- AI must **validate query relevance before selecting a report definition**.
- Non-HR queries must **not map to an HR report**.
- The agent must not return employee/payroll/HR data for unrelated queries.
- Queries outside the available HRM scope should return a clear **out-of-scope message**.
- Valid HR queries such as *"Show employees who joined in 2026"* should continue working normally.

- The AI should only use **report definitions/data sources configured for this HRM application**.
- No unrelated-domain information (banking, beauty products, shopping, etc.) should be generated or retrieved.

priority: 🔴 High



TICKET# 58: (fixed)

Ticket: Remove Internal Share Link from Saved Reports

Module: Reports → Saved Reports
Priority: Low
Type: UI Cleanup / Bug

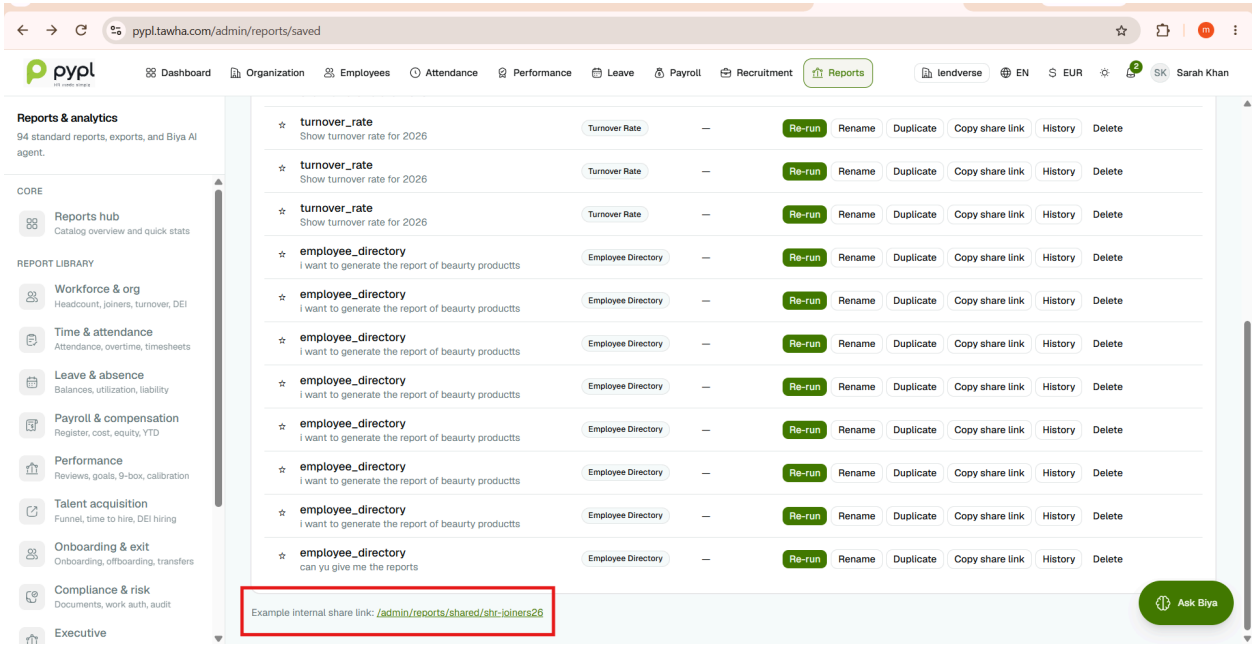
Description:
The **"Example internal share link: /admin/reports/shared/shr-joiners26"** text and link displayed at the bottom of the Saved Reports page should be removed.

Actual Result:
An internal/example share URL is visible to users at the bottom of the page.

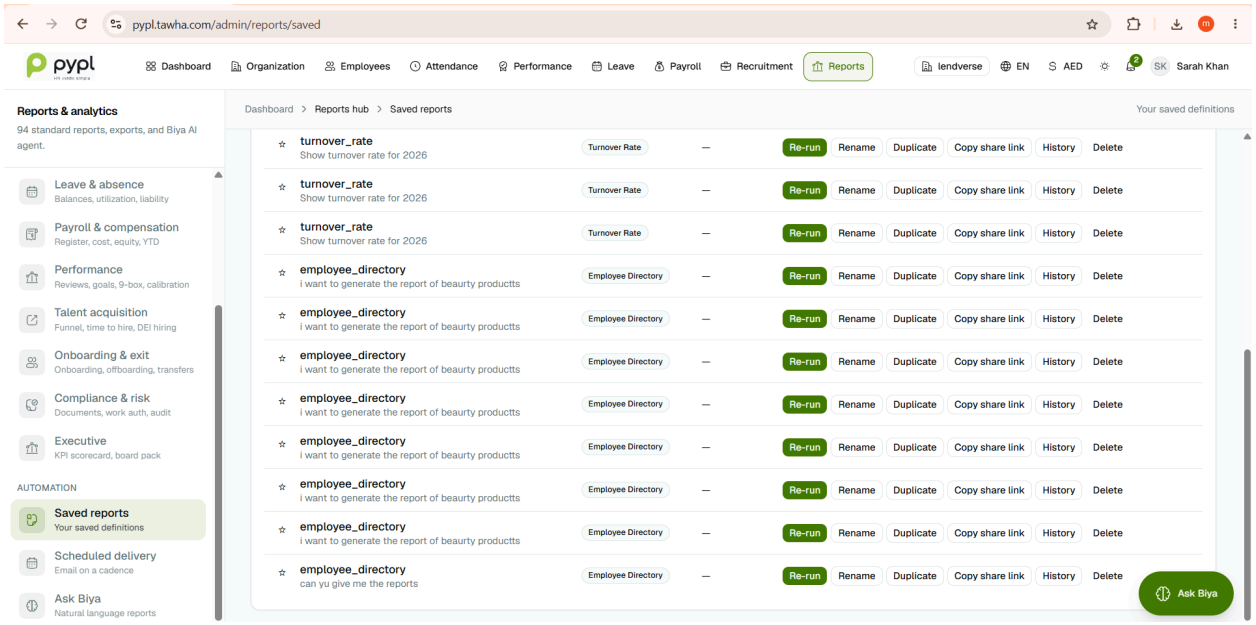
Expected Result:
The example internal share link should not be displayed on the production page.

Acceptance Criteria:

- Remove the **“Example internal share link:”** text.
- Remove the `/admin/reports/shared/shr-joiners26` link.
- Ensure no hardcoded/example internal share links are displayed elsewhere in the production UI.
- Saved Reports functionality and actual **Copy share link** functionality should remain unaffected.



Fixed ss:



TICKET# 59: not fixed

Ticket: Add Time Field to Create Schedule

Module: Reports → Scheduled Reports
Priority: Medium
Type: Enhancement / UI

Description:
The **Create schedule** modal currently allows the user to select the saved report, schedule name, frequency, recipients, role-based recipients, and attachment format, but there is **no option to specify the time** at which the scheduled report should be generated/sent.

Required Change:
Add a **Time** field to the **Create schedule** modal.

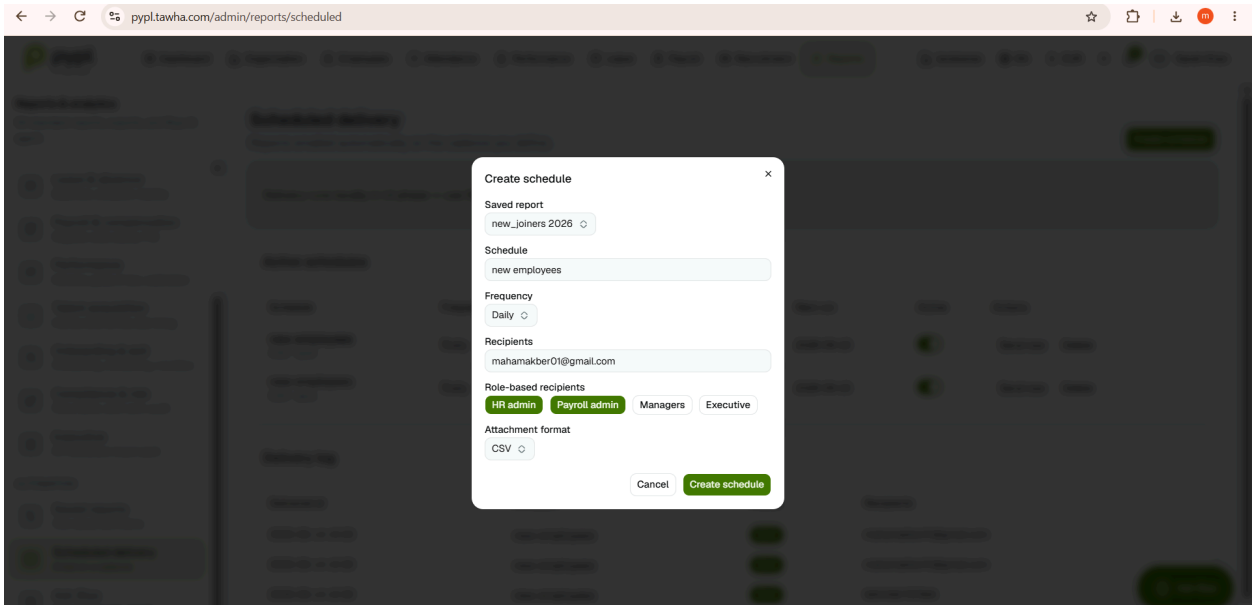
Expected UI:

- Add **Time** field below **Frequency**.
- Use a time picker/input.
- Allow the user to select a specific time, e.g. `09:00 AM`.
- The selected time should be saved with the schedule.

- The scheduled report should execute/send at the configured time according to the selected frequency.

Acceptance Criteria:

- Time field is visible when creating a schedule.
- Time is mandatory when creating a schedule.
- User can select a valid time.
- Invalid/empty time shows a validation message.
- Selected time persists after creating the schedule.
- Scheduled reports execute at the configured time.
- Existing frequency options continue to work correctly.



TICKET# 60: not fixed

Bug: Email Configuration Missing for Scheduled Reports

Module: Reports → Scheduled Reports

Issue:
User is able to create and activate a scheduled report without having any email

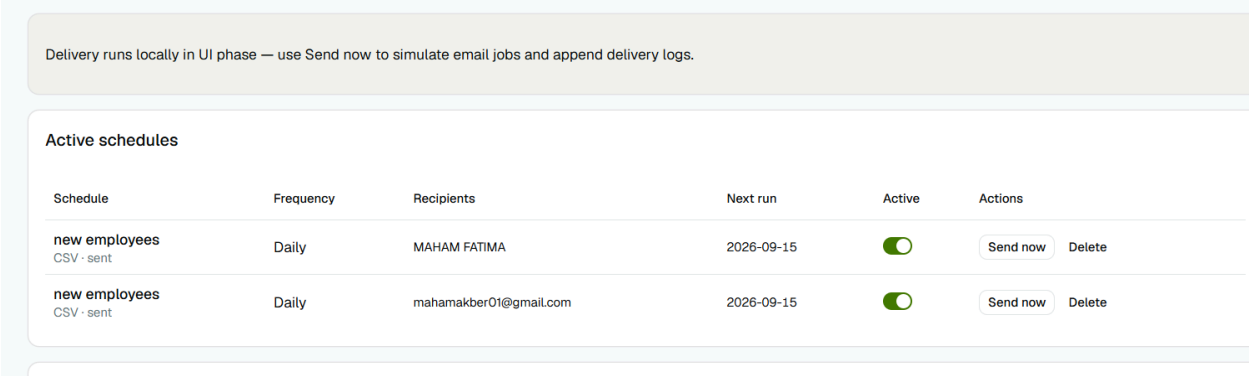
configuration set up. The schedule shows recipients and an active status, but there is no validation or configuration step to ensure the email service is properly configured.

Expected behavior:

- System should check whether email/SMTP configuration is available before creating or activating an email schedule.
- If email is not configured, prevent schedule creation and show a clear message such as:
  "Email service is not configured. Please configure email settings before creating a scheduled report."
- Alternatively, provide a clear **Configure Email** action.
- **Send now** should also be blocked if email delivery is not configured.

Actual behavior:
Schedule is successfully created and appears as **Active**, even though email configuration is not available.

Priority: High



TICKET# 61:

Bug: Invalid Recipient Value Accepted

Module: Reports → Scheduled Reports

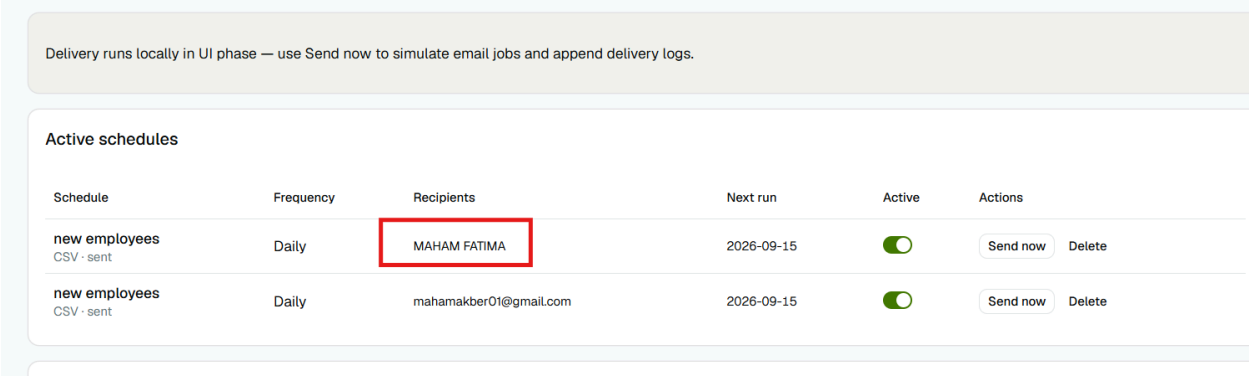
Issue:
The **Recipients** field is accepting a person's name (`MAHAM FATIMA`) instead of an email address.

Expected behavior:

- The **Recipients** field should accept **email addresses only**.
- Validate the email format before allowing the schedule to be created.
- Names, usernames, or other non-email values should be rejected.
- Show an inline validation message, e.g.:
  “Please enter a valid email address.”

Actual behavior:
`MAHAM FATIMA` was accepted as a recipient and the schedule was created successfully.

Priority: High



TICKET# 62: not fixed

1. Recruitment → Hiring Programs – Page Content Not Loading

Priority: 🔴 **High**
Severity: Major

Issue:
The **Hiring Programs** page is loading successfully, but the main content/data section remains completely blank. Only the page heading and description are displayed.

Steps to Reproduce:

1. Go to **Recruitment**.
2. Open **Hiring Programs**.
3. Wait for the page to load.

Actual Result:
The page loads but no hiring program records, cards, table, or other expected content are displayed.

Expected Result:
The Hiring Programs page should display the available management trainee, internship, and university hiring programs. If no records exist, an appropriate **empty-state message** should be displayed instead of a completely blank area.

---

2. Recruitment → Hackathons – Page Content Not Loading

Priority: 🔴 **High**
Severity: Major

Issue:
The **Hackathons** page loads the header and navigation correctly, but the main content area is completely blank.

Steps to Reproduce:

1. Go to **Recruitment**.
2. Open **Hackathons**.
3. Wait for the page to load.

Actual Result:
No hackathon records, events, actions, or empty-state message are displayed.

Expected Result:
The page should display available hackathons/events and their relevant information. If there are no records, the system should display a proper **"No hackathons available"** empty state.

---

3. Recruitment → Hiring Budgets – Budget Utilization Chart Not Rendering

Priority: 🔴 **High**
Severity: Major

Issue:
The **Hiring Budgets** page displays the **Budget utilization %** chart container, but the chart itself does not render any data.

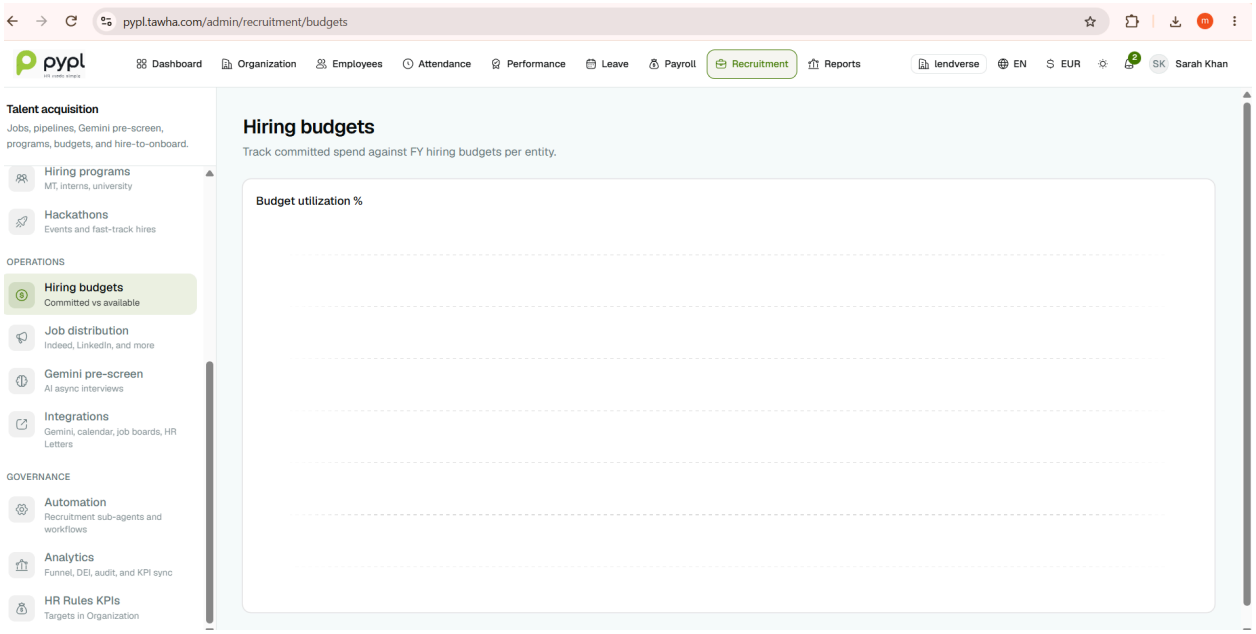
Steps to Reproduce:

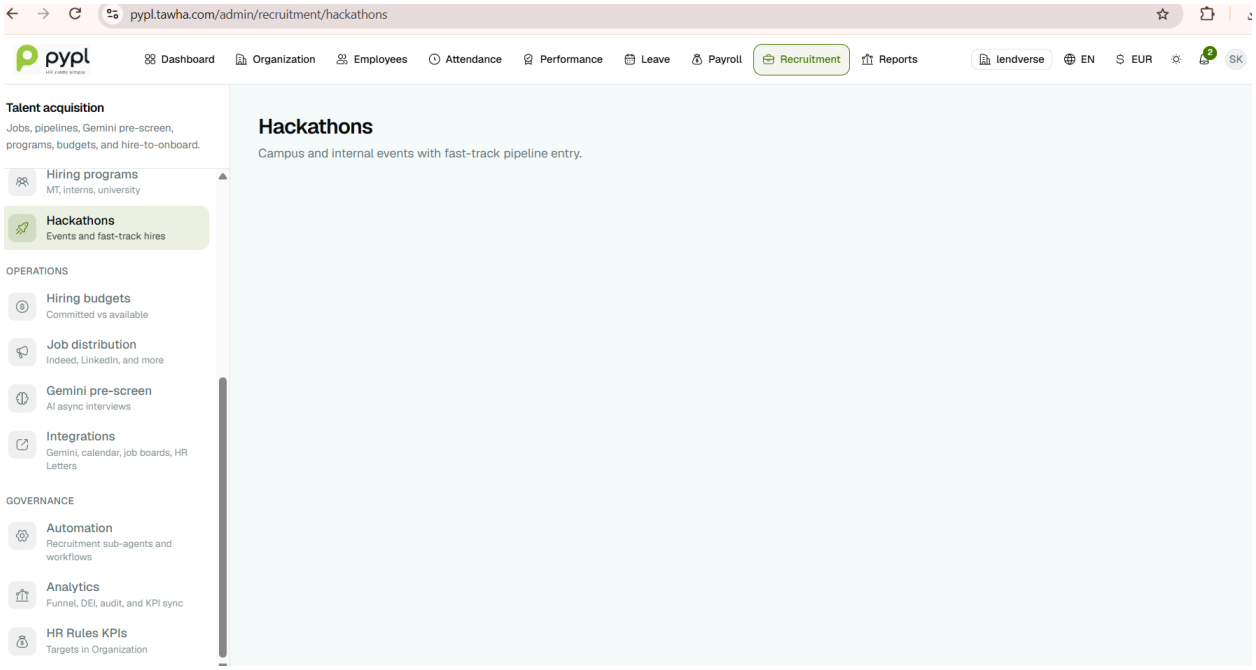
1. Go to **Recruitment**.
2. Open **Hiring Budgets**.
3. Observe the **Budget utilization %** section.

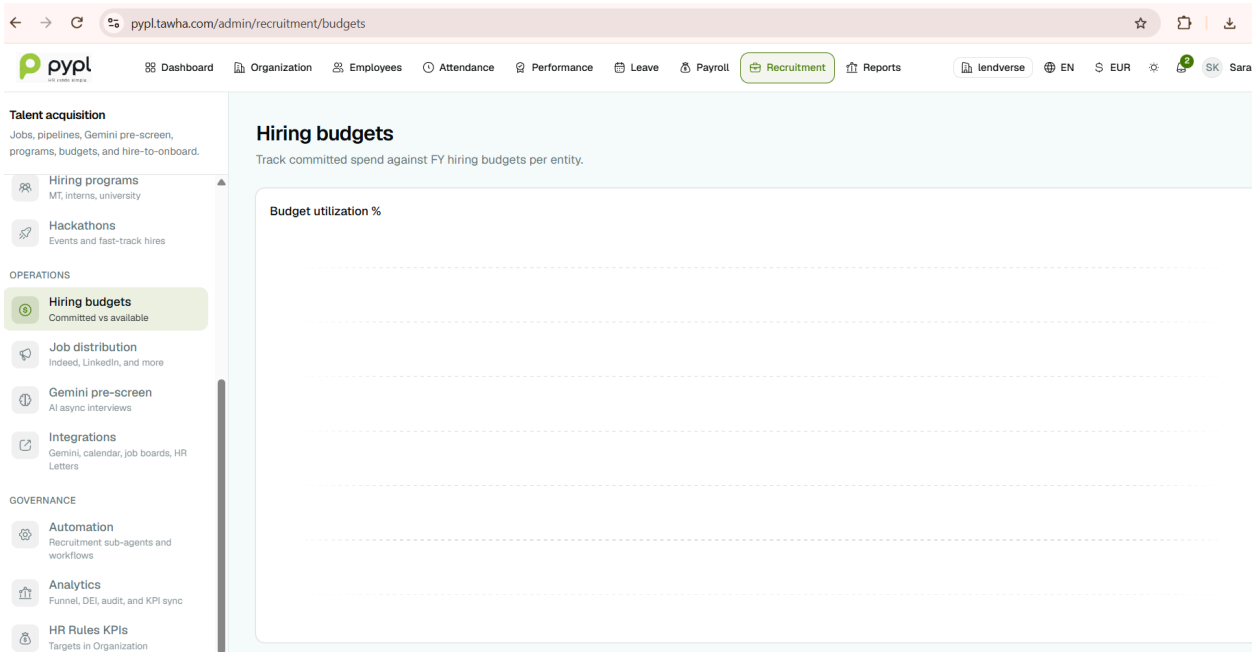
Actual Result:
The chart area is completely blank. Grid lines are visible, but no bars, values, labels, or budget utilization data are displayed.

Expected Result:
The **Budget utilization %** chart should render the available hiring-budget data with the appropriate values, labels, and visual representation. If no budget data exists, a meaningful empty state should be shown.

Overall Priority: 🔴 High







TICKET# 63: not fixed

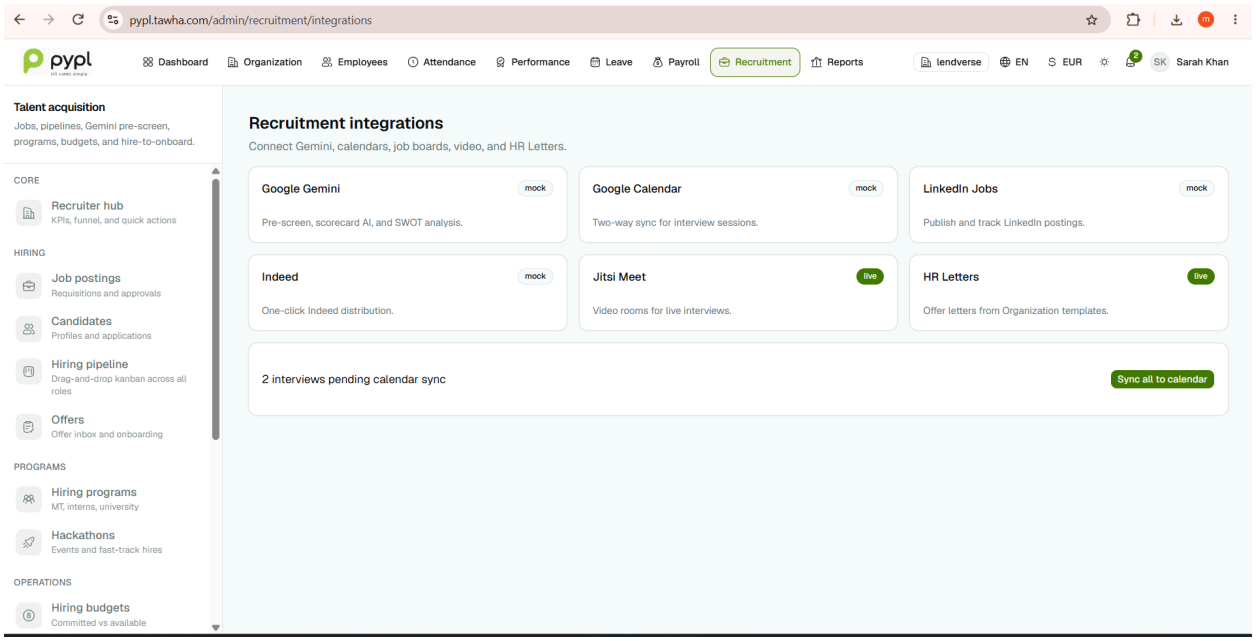
Bug: Recruitment Integrations Are Not Fully Integrated

Module: Recruitment → Integrations
Priority: 🔴 **High**
Severity: Major

Issue:
The **Recruitment Integrations** page displays multiple integrations, but most of them are marked as **“mock”** instead of being actually connected/integrated.

Affected integrations:

- Google Gemini — **Mock**
- Google Calendar — **Mock**
- LinkedIn Jobs — **Mock**
- Indeed — **Mock**
- Jitsi Meet — **Live**
- HR Letters — **Live**



Steps to Reproduce:

1. Go to **Recruitment** → **Integrations**.
2. Review the available integrations.
3. Observe the status badges.
4. Try using the integration-related functionality.

Actual Result:
Four integrations are shown as **Mock**, while only Jitsi Meet and HR Letters are marked **Live**.

Expected Result:
All integrations presented as available features should either:

- be fully integrated and functional, **or**
- clearly be labelled as **Not configured / Coming soon / Demo** and their related actions should be disabled.

The **“Sync all to calendar”** action should only be enabled when Google Calendar is properly configured and connected.

TICKET# 64: not fixed

Ticket: Fix “Sync all to calendar” — Not Found Error

Module: Recruitment → Integrations
Feature: Google Calendar Integration
Priority: High
Type: Bug

Description:
When the user clicks the **“Sync all to calendar”** button under Recruitment Integrations, the system displays a **“not found”** error instead of syncing the pending interviews to Google Calendar.

Steps to Reproduce:

1. Go to **Recruitment** → **Integrations**.
2. Locate the **Google Calendar** integration.
3. Ensure there are interviews pending calendar sync.
4. Click **“Sync all to calendar”**.
5. Observe the error notification.

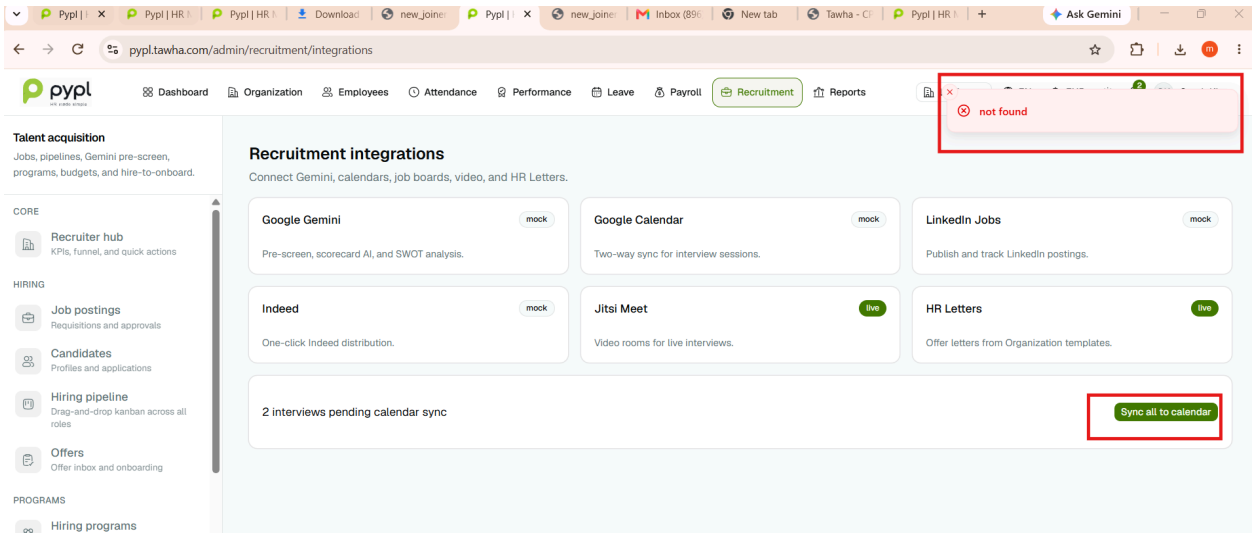
Actual Result:
A **“not found”** error notification is displayed, and the interviews are not synced.

Expected Result:
The system should successfully sync all interviews pending calendar synchronization and display a success message, e.g.:

> **“2 interviews synced to Google Calendar successfully.”**

If Google Calendar is not connected/configured, the system should instead display a meaningful message such as:

“Google Calendar is not connected. Please connect your calendar to sync interviews.”



TICKET# 65:

Ticket: Currency Field Saves Invalid Alphabetic Values

Module: Payroll → Salary Structures
Feature: Salary Structure / Currency
Priority: High
Type: Bug

Description:
In **Payroll → Salary Structures**, the currency value can be entered/saved as arbitrary alphabetic characters instead of a valid currency code. In the screenshot, the currency appears to have been saved as an invalid string.

Actual Result:
The system allows values such as:

AEUUUHHHHHHHHHHHHHHHHHHHHHHHHHHHHH

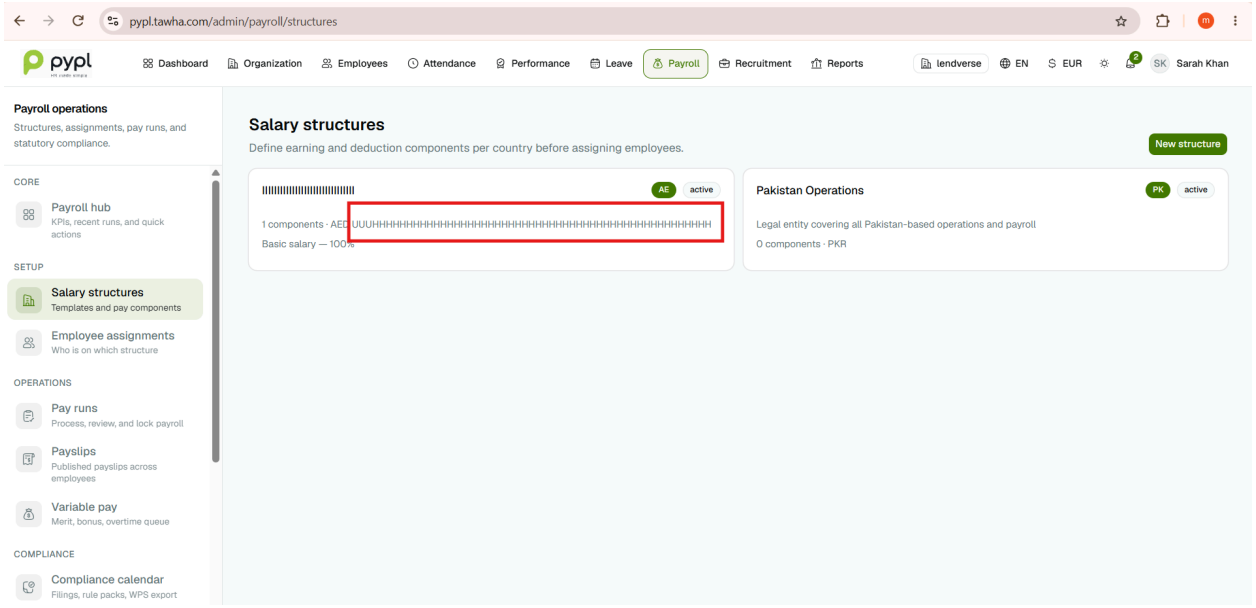
to be saved as the currency.

Expected Result:
The currency field should only allow valid supported currencies, for example:

- **PKR — Pakistani Rupee**

- **USD — US Dollar**
- **EUR — Euro**
- **GBP — British Pound**
- etc.

The user should **select the currency from a dropdown/searchable selector** rather than typing arbitrary text.



TICKET# 66: (fixed)

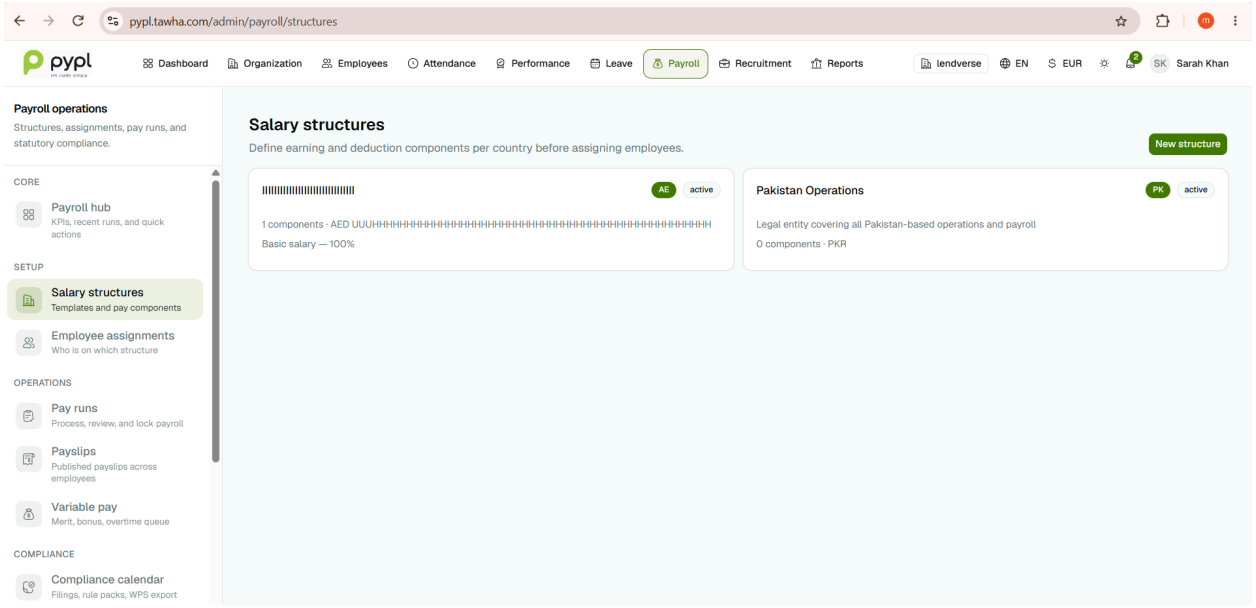
Ticket: Add Delete Option for Salary Structures

Module: Payroll → Salary Structures
Feature: Salary Structure Management
Priority: Medium
Type: Feature / Enhancement

Description:
There is currently no **Delete** option for existing salary structures under **Payroll → Salary Structures**. Users need the ability to remove salary structures that are no longer required or were created incorrectly.

Actual Result:
Existing salary structures can be viewed/managed, but there is **no Delete action** available.

Expected Result:
Add a **Delete** option for each salary structure, allowing authorized users to permanently remove an unwanted structure.



TICKET# 67: (fixed)

Bug Ticket: Recruitment Automation — Incorrect Activity Timestamp

Title: Recruitment Automation activity time is incorrect

Module: Recruitment → Automation
Priority: Medium
Type: Bug

Description:
The **Recent automation activity** section is displaying an incorrect time for automation events.

For example, the activity shows:

```
2026-09-15T06:08
```

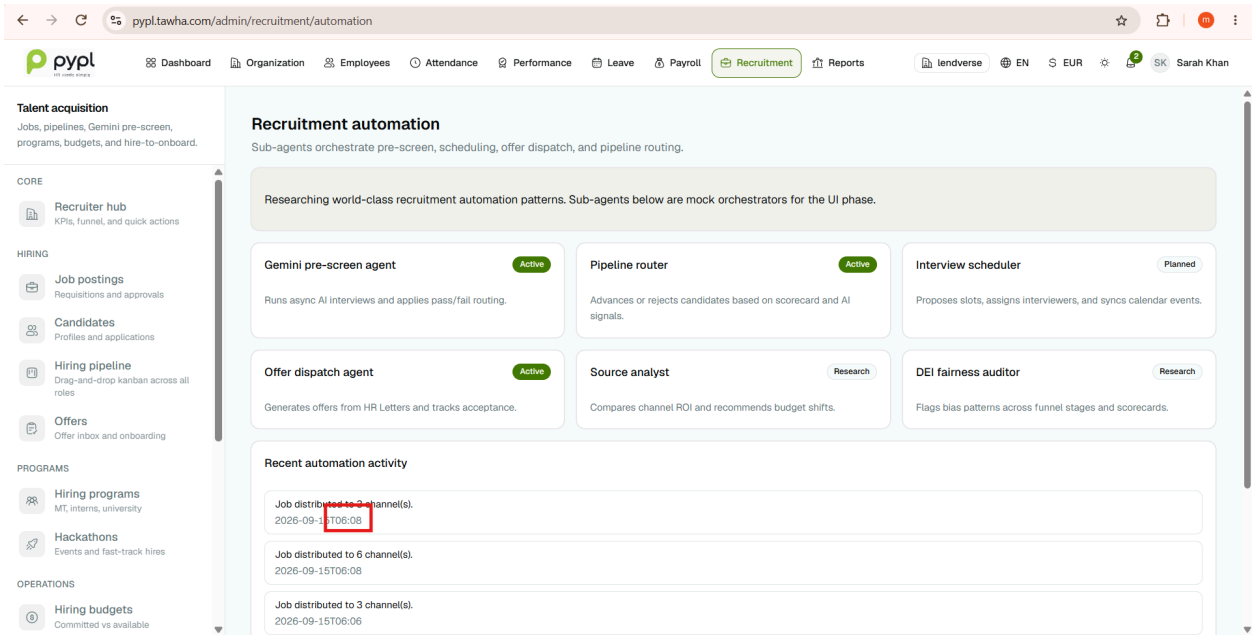
but the application's expected local time should be displayed according to the configured/user timezone.

Steps to reproduce:

1. Go to **Recruitment** → **Automation**.
2. Check the **Recent automation activity** section.
3. Observe the timestamp displayed under an automation event.
4. Compare it with the actual local/current time.

Expected result:
Activity timestamps should display the correct local date and time based on the application's/user's configured timezone.

Actual result:
The timestamp appears to be showing a different timezone (likely UTC), causing the displayed time to be incorrect.



TICKET# 68: not fixed

Title: Redesign Add Payroll Rule form with conditional rule builder

Description:
The current **Add payroll rule** UI only provides basic fields such as Rule name, Condition, and Effect. It should instead provide a structured payroll-rule creation form where the administrator can define:

1. Rule name
2. Rule type
3. **WHEN** condition with:
    - Payroll metric
    - Operator
    - Threshold/value
    - Period
4. **THEN** action/effect
5. Approvers when approval is required
6. Employee scope
7. Active/inactive status
8. Cancel and Save rule actions

Expected behavior:
The administrator should be able to create a rule such as:

> **When** overtime hours are greater than 20 per month, **then** require approval from Manager and HRBP, **applies to** all employees, **status:** Active.

Expected UI

Add payroll rule

Rule name
`Overtime cap approval`

Rule type
`Overtime ▾`

WHEN

Overtime hours `>` **20** `per month ▾`

THEN

Action

`Require approval ▾`

Approvers

- ☑ Manager
- ☑ HRBP

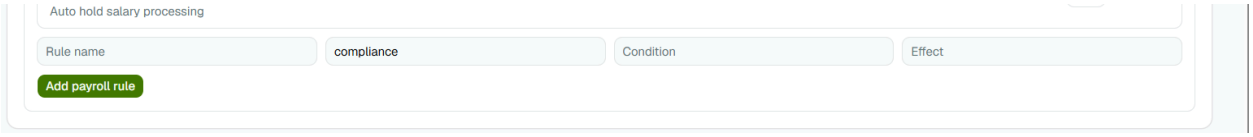
Applies to

`All employees ▾`

Status

`Active` toggle

Cancel **Save rule**



TICKET# 69: not fixed

Feature Ticket: Add View & Download Options for HR Documents

Title: Add View and Download actions for HR documents

Module: Employees → Documents
Type: Feature / UI Enhancement
Priority: Medium

Description:
The **HR Documents** page currently displays the available documents, but there is no action available to open/view the document or download it.

Each document should provide actions that allow the user to either **view the document** or **download a copy**.

Expected UI:

Add an **Actions** column to the documents table:

Document	Category	Owner	Updated	Actions
Employee handbook	Policy	HR	2026-01-15	**View** · **Download**
Code of conduct	Policy	Legal	2025-11-02	**View** · **Download**
Remote work policy	Guidelines	HR	2026-02-20	**View** · **Download**
Performance review template	Templates	HR	2026-03-01	**View** · **Download**

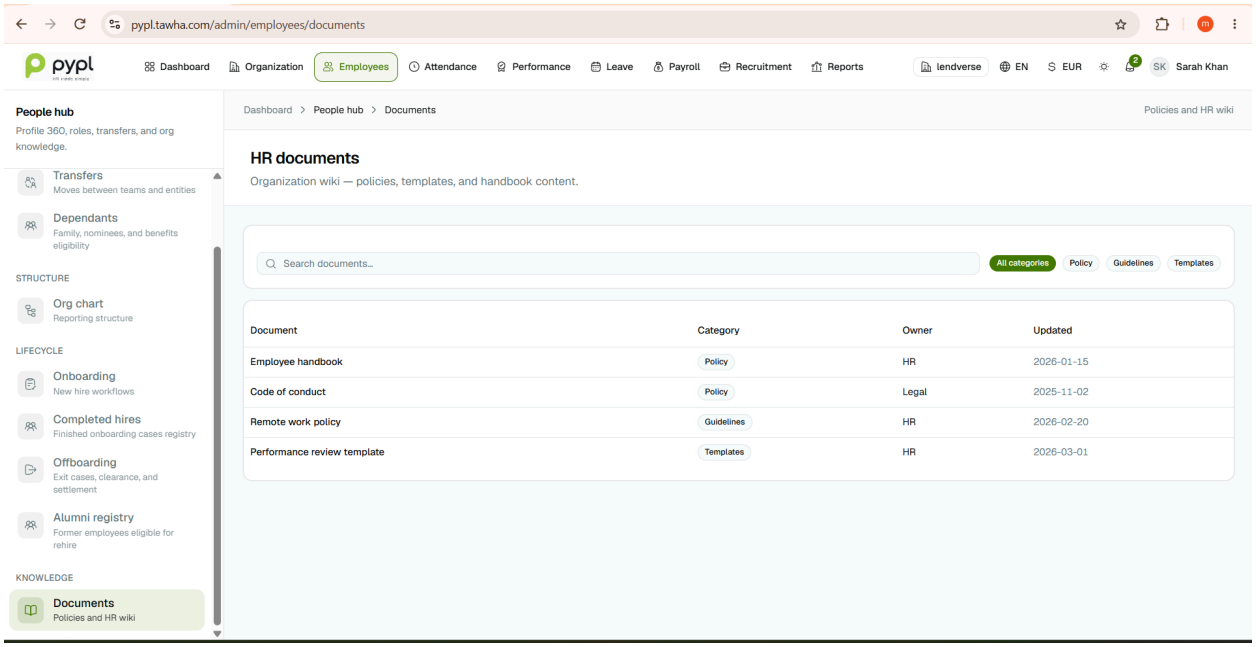
Expected behavior

View

- Opens the selected document in a document viewer/modal or dedicated document page.
- User should be able to read the complete document without leaving the HR Documents section.
- Provide a close/back option.

Download

- Downloads the selected document in its original/available file format.
- The downloaded file should retain the correct document name and extension.



TICKET# 70: not fixed

Title: Cleared/offboarded employee is still displayed in Employee Directory

Module: Employees → Employee List / Offboarding
Priority: High
Type: Bug

Description:
An employee who has completed the offboarding process is still appearing in the **Employee Directory**.

In the example, **Maham Fatima** appears in the Offboarding workflow and has completed the required offboarding process, but she is still listed in **Employee List** with status **Active**.

Steps to reproduce:

1. Go to **Employees** → **Offboarding**.
2. Complete/clear an employee's offboarding case.

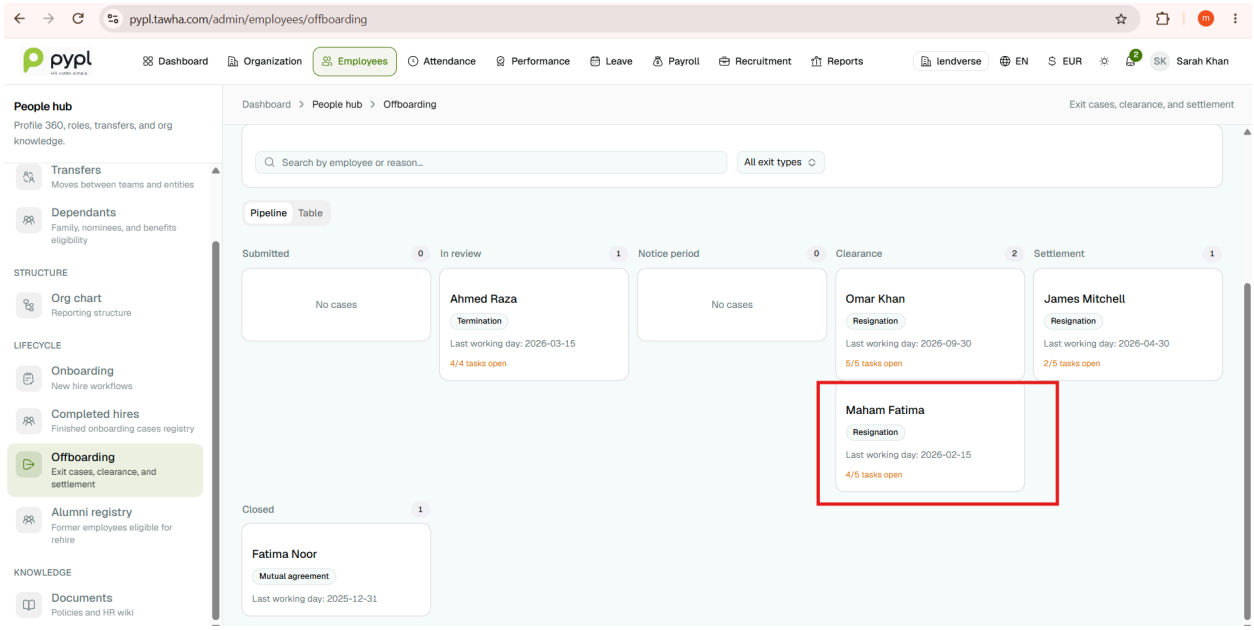
3. Go to **Employees → Employee List**.
4. Search for the same employee.
5. Observe that the employee is still displayed as **Active**.

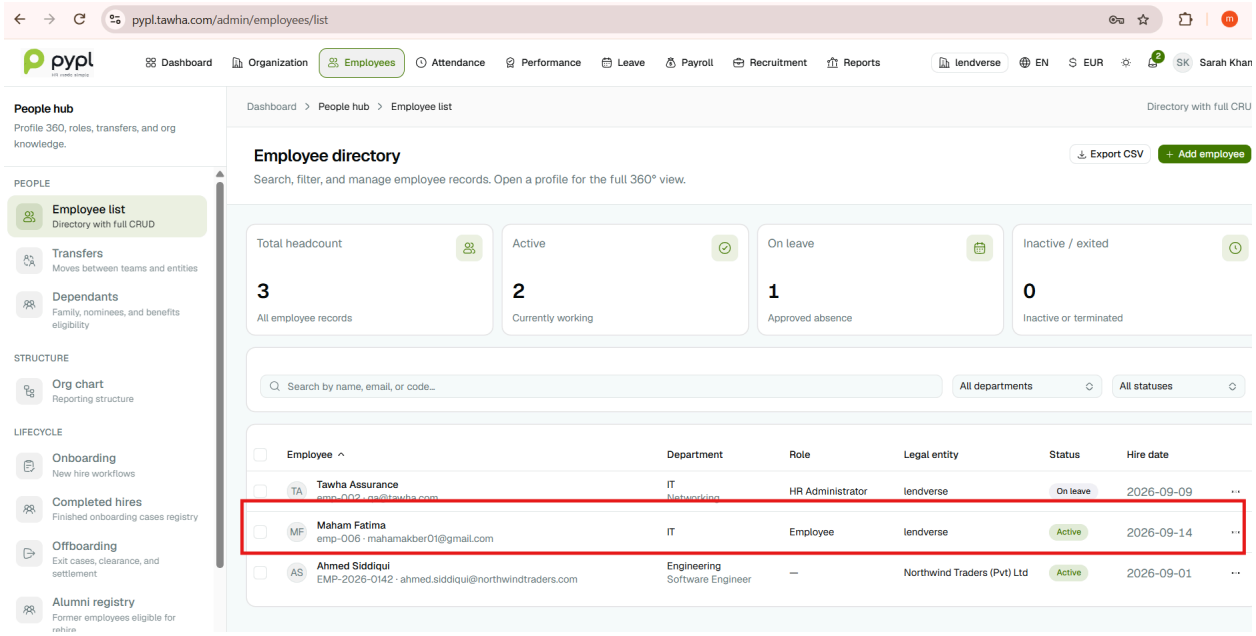
Expected result:
Once an employee's offboarding is completed/cleared, their employment status should be updated accordingly.

The employee should:

- No longer appear under **Active** employees.
- Appear under **Inactive / Exited** where applicable.
- Have their status reflected consistently across Employee List, Employee Profile, and Offboarding.

Actual result:
The employee remains in the Employee Directory and is shown with **Active** status.





TICKET# 71: (16TH SEP)

Title: Employee Directory PDF Export Shows Incomplete Information and Incorrect Format

Module: Employees → Employee List → Export

Type: Bug

Description:
The **Employee Directory PDF export is not matching the CSV export**. The PDF has two issues:

1. The information is **not displayed in a proper tabular/column format**.
2. The PDF contains **only partial/half information for employee records**, while the CSV contains the complete information.

Steps to Reproduce:

1. Go to **Employees** → **Employee List**.
2. Export the employee directory as **CSV**.
3. Export the employee directory as **PDF**.
4. Open both files and compare the records and fields.

Actual Result:

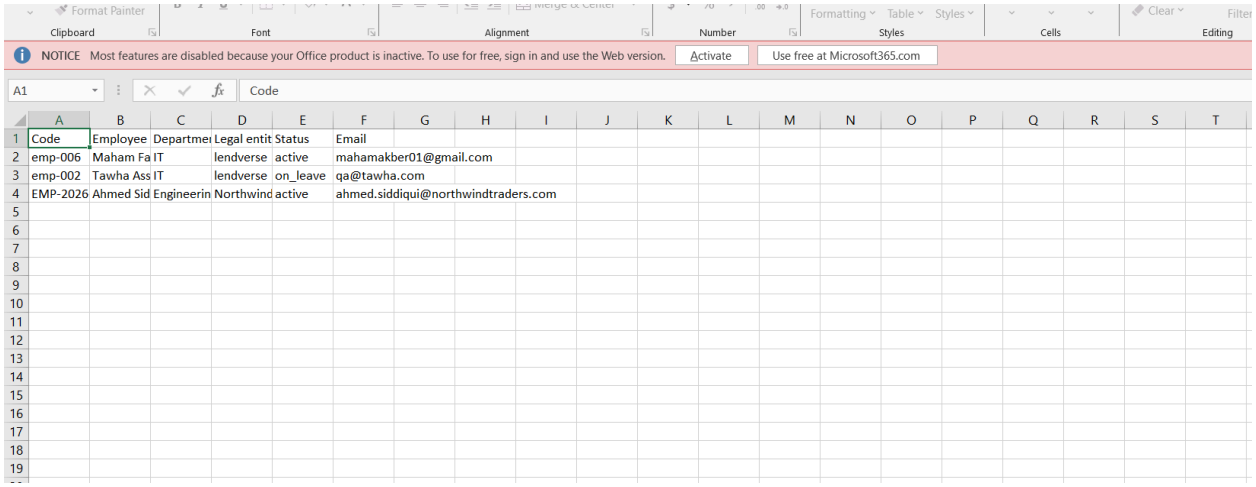
- PDF does not maintain the same table structure as the CSV.
- Employee information is displayed as concatenated text.
- Some information is **cut off/truncated or missing**.
- PDF does not contain the complete employee data available in the CSV.

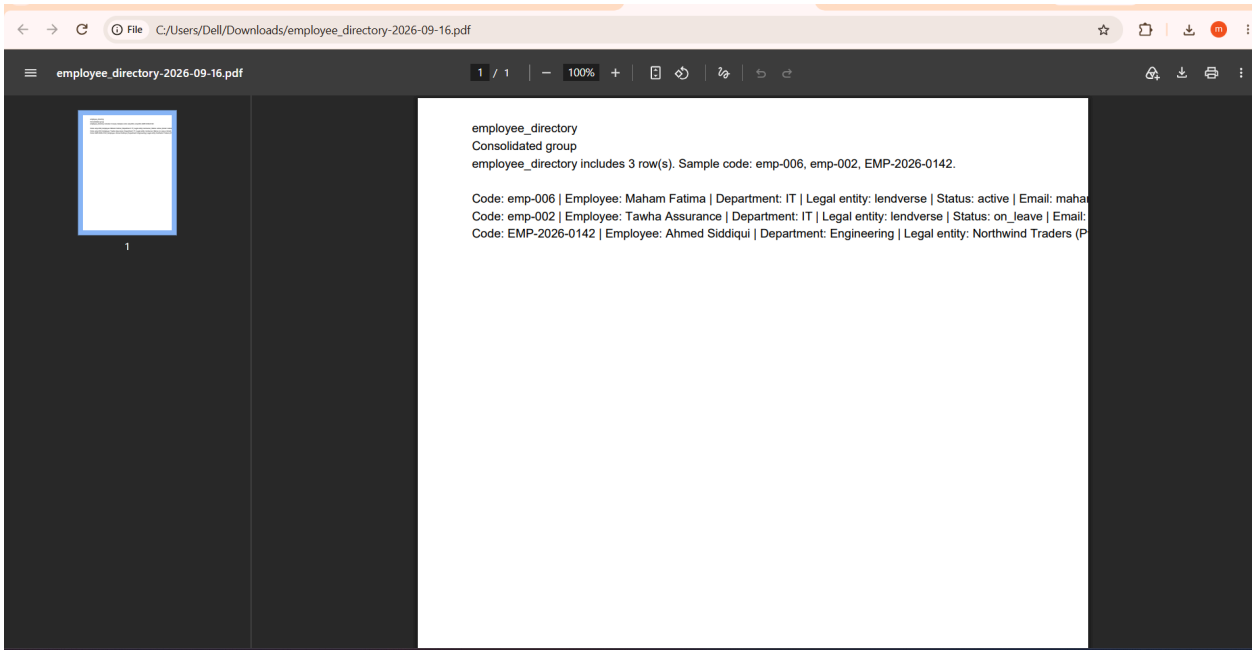
Expected Result:
The PDF should contain **complete information for every employee** and should match the CSV data.

The PDF should be formatted as a proper table with clearly separated columns:

Code | Employee | Department | Legal Entity | Status | Email

All values should be fully visible and readable, without any truncation or missing information.





TICKET# 72:

Bug Ticket: Inactive Legal Entities Cannot Be Deleted

Priority: Medium
Module: Organization → Legal Entities

Description:
Inactive legal entities are displayed in the **Legal Entities** table when **Show inactive** is enabled, but the **Delete** action does not work for inactive entities.

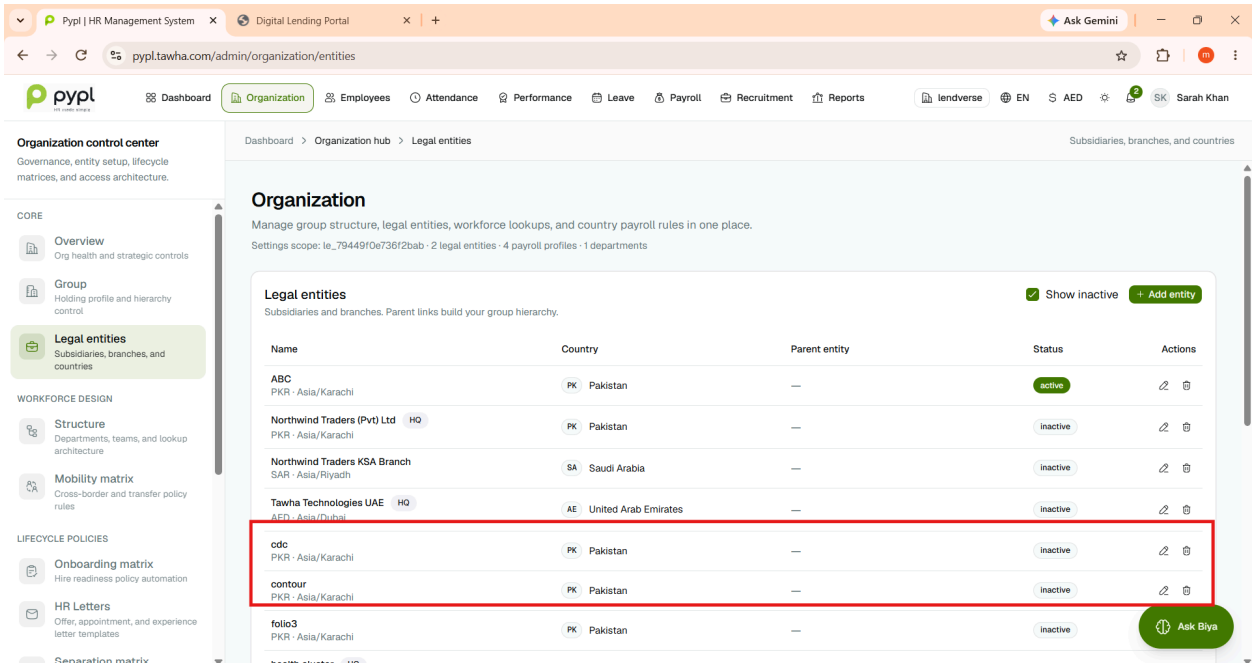
Steps to Reproduce:

1. Go to **Organization** → **Legal Entities**.
2. Enable **Show inactive**.
3. Locate an inactive legal entity.
4. Click the **Delete** 🗑️ icon.
5. Observe the result.

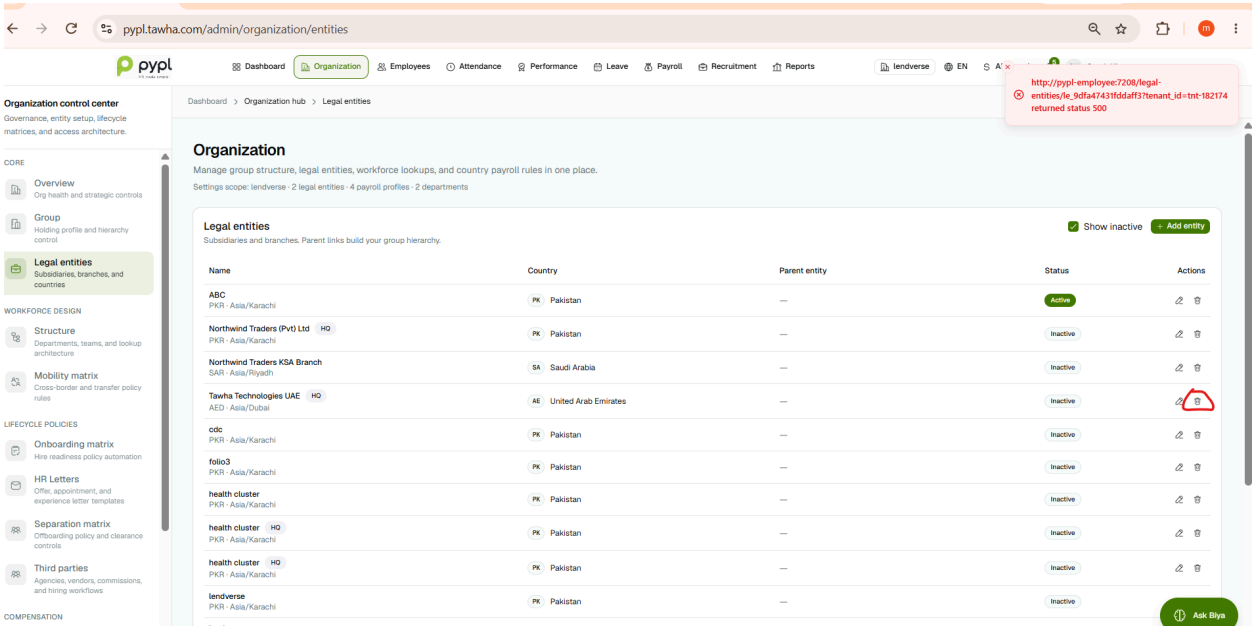
Actual Result:
The inactive legal entity is displayed with a **Delete** icon, but it cannot be deleted.

Expected Result:
The Delete action should work for inactive legal entities. When the user clicks Delete:

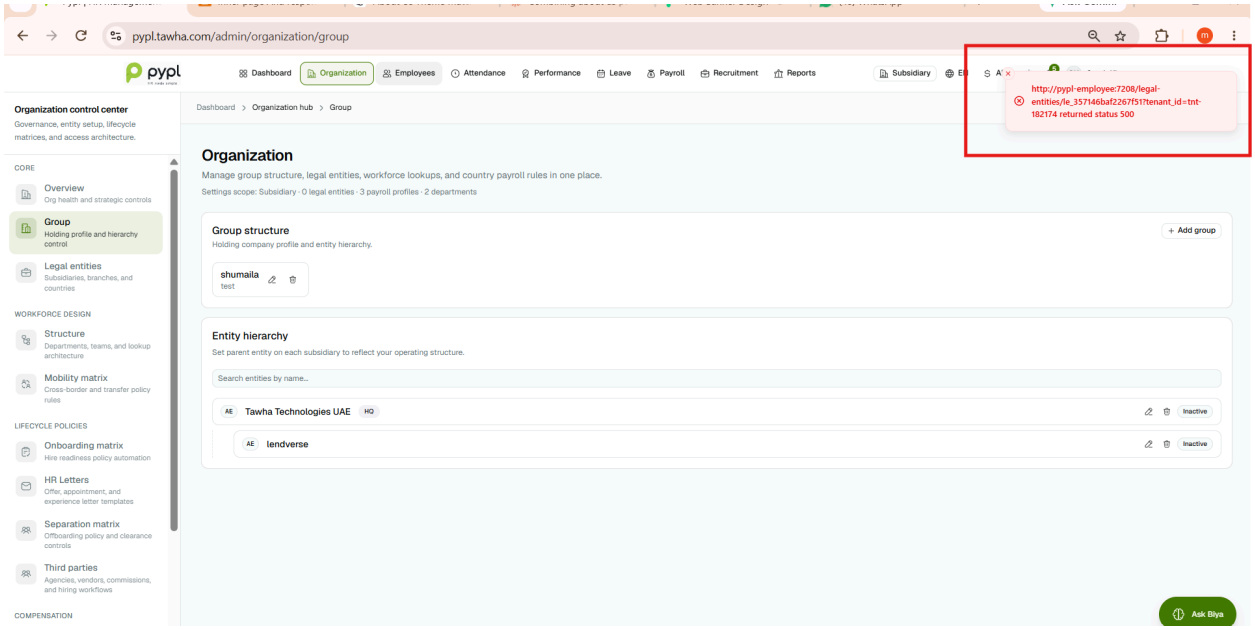
- A confirmation dialog should appear.
- After confirmation, the inactive legal entity should be permanently removed.
- The entity should no longer appear in the list after deletion.



TICKET# 73:



TICKET# 74:



TICKET# 75: 22/9/2026

Ticket: Add Employee Group Field to Teams

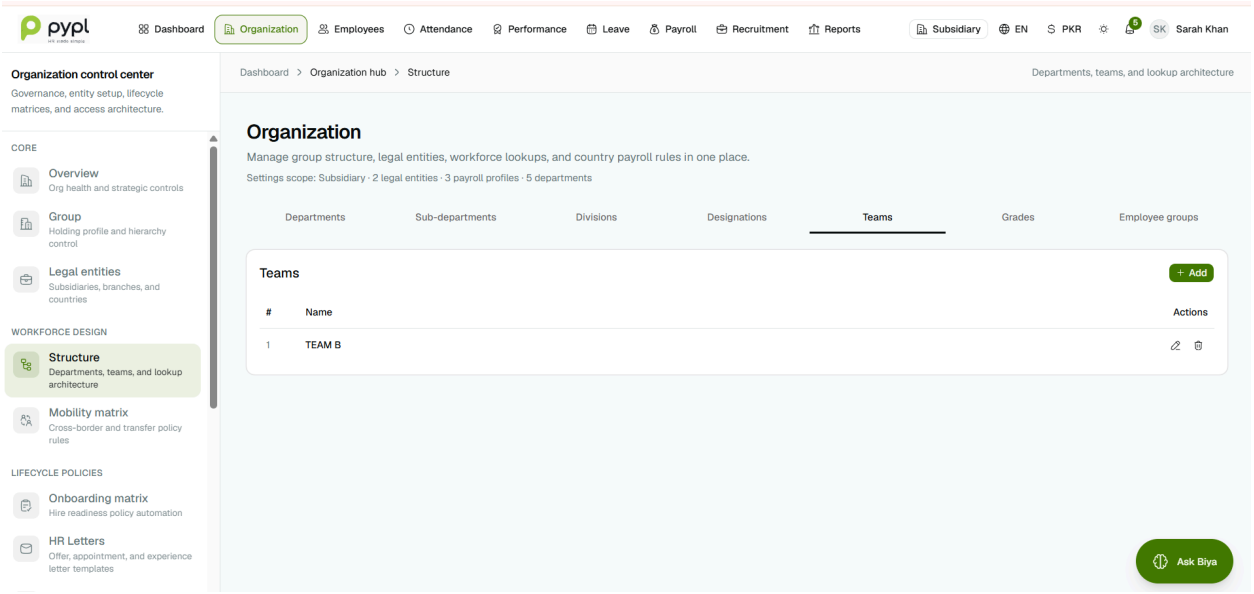
Priority: Medium
Module: Organization → Structure → Teams

Description:
Add an **Employee Group** field to the Teams section. The Employee Group field should display the values created under the **Employee Groups** tab, allowing users to select the relevant employee group when creating or editing a team.

Expected Behavior:

- Add an **Employee Group** column to the Teams table.
- Add an **Employee Group** field in the **Add/Edit Team** form.
- The Employee Group field should be a **dropdown**.
- The dropdown should contain all employee group values created under **Employee Groups**.
- When creating a team, the user can select an employee group and save it with the team.
- The selected employee group should be displayed against the respective team in the Teams table.

- If a new employee group is created, it should automatically become available in the Team dropdown.
- If an employee group is renamed, the updated name should reflect wherever it is assigned.
- If an employee group is deleted, the system should handle existing team assignments appropriately and prevent broken/invalid references.



TICKET# 76:

Ticket: Add Edit Option and Improve HR Letter Template Management

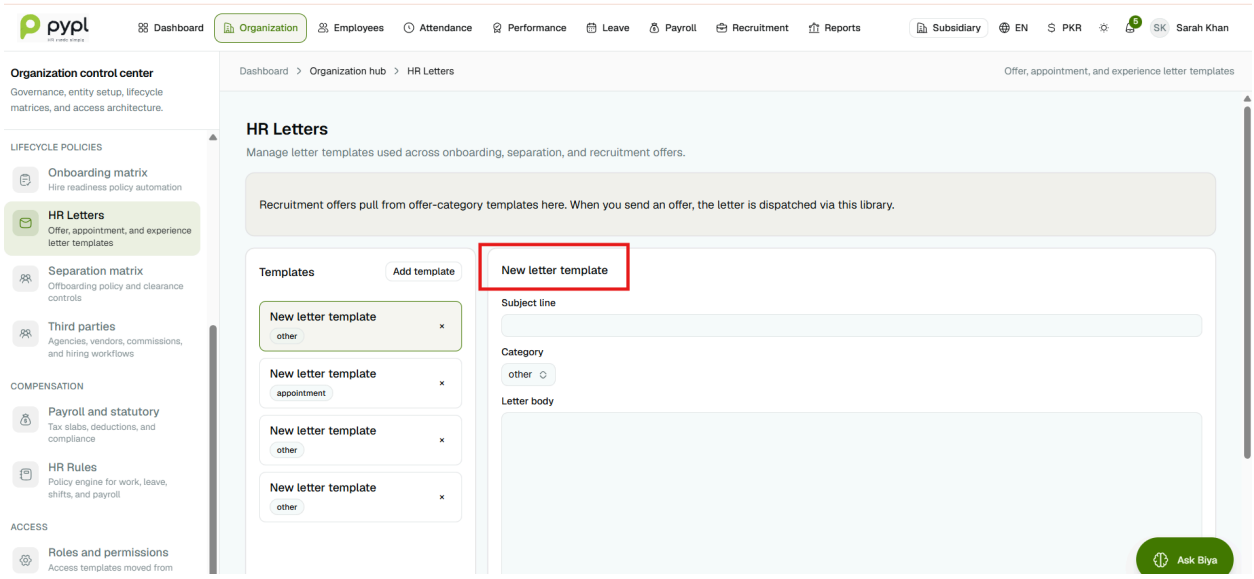
Priority: Medium
Module: Organization → HR Letters

Description:
The **HR Letters** section currently does not provide an easy way to edit existing templates. Multiple templates are also displayed with generic names such as **"New letter template"** and categories such as **"other"** or **"appointment"**, which can make it difficult for HR to identify the latest or correct template.

Expected Behavior:

- Add an **Edit ✏️ icon** for each existing letter template.
- HR should be able to edit:

    - Template name
    - Subject line
    - Category
    - Letter body
- Changes should be saved and reflected immediately in the template list.
- Template names should be **unique/descriptive** rather than repeatedly showing **“New letter template.”**
- The template list should clearly display the **template name and category**.
- Add a **Created/Updated date** to each template so HR can easily identify the latest version.
- Sort templates by **Recently Updated** by default, with the latest updated template appearing first.
- If multiple templates have the same category, they should still be distinguishable through their names and updated dates.
- Delete should continue to require confirmation before removing a template.



TICKET# 77:

Bug Ticket: HR Letters Template Not Translated to Urdu

Priority: Medium
Module: Organization → HR Letters

Description:
When the application language is changed to **Urdu**, the **HR Letters / Letter Templates** section is not fully translated. Several template-related labels and content are still displayed in English.

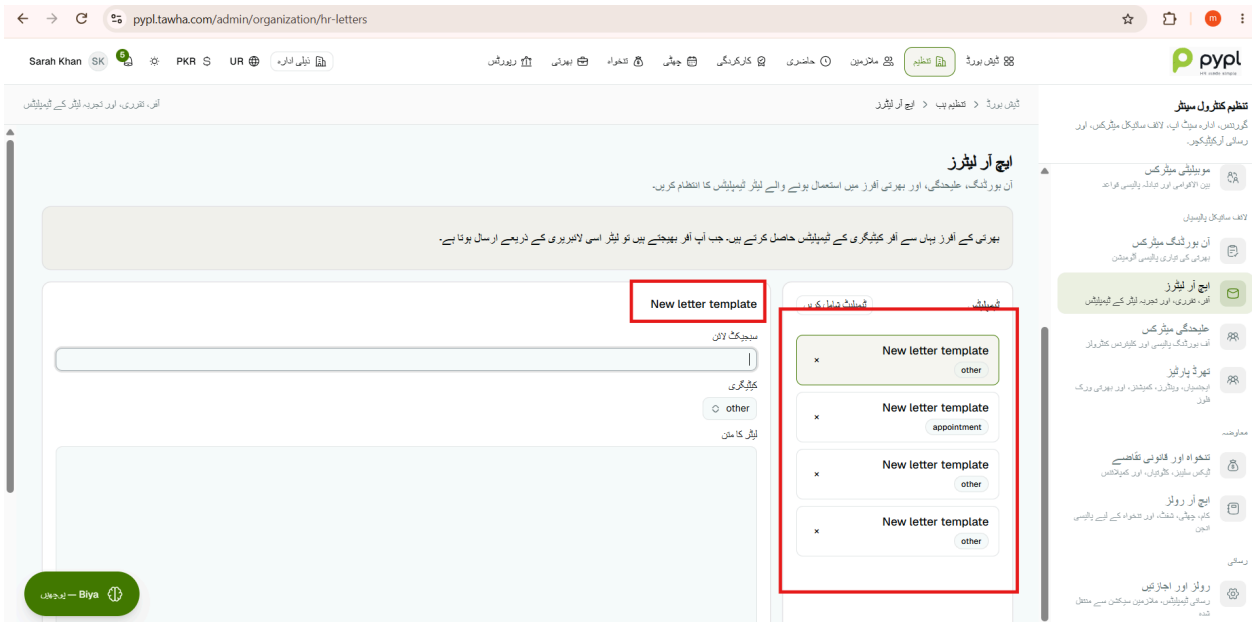
Actual Result:

- **“New letter template”** is still displayed in English.
- Template categories such as **“other”** and **“appointment”** remain in English.
- Other HR Letter template labels/fields are also not translated to Urdu.

Expected Result:
When the application language is set to **Urdu**, all HR Letters UI text should be displayed in Urdu, including:

- Page heading
- Template names/labels
- **New letter template**
- **Subject line**
- **Category**
- **Letter body**
- Category values such as **Other** and **Appointment**
- Add/Edit template buttons and related actions

The Urdu translation should be applied consistently throughout the **HR Letters** module.



TICKET# 78:

Bug Ticket: Urdu Employee List Alignment & Translation Issues

Priority: Medium
Module: Employees → Employee List
Language: Urdu

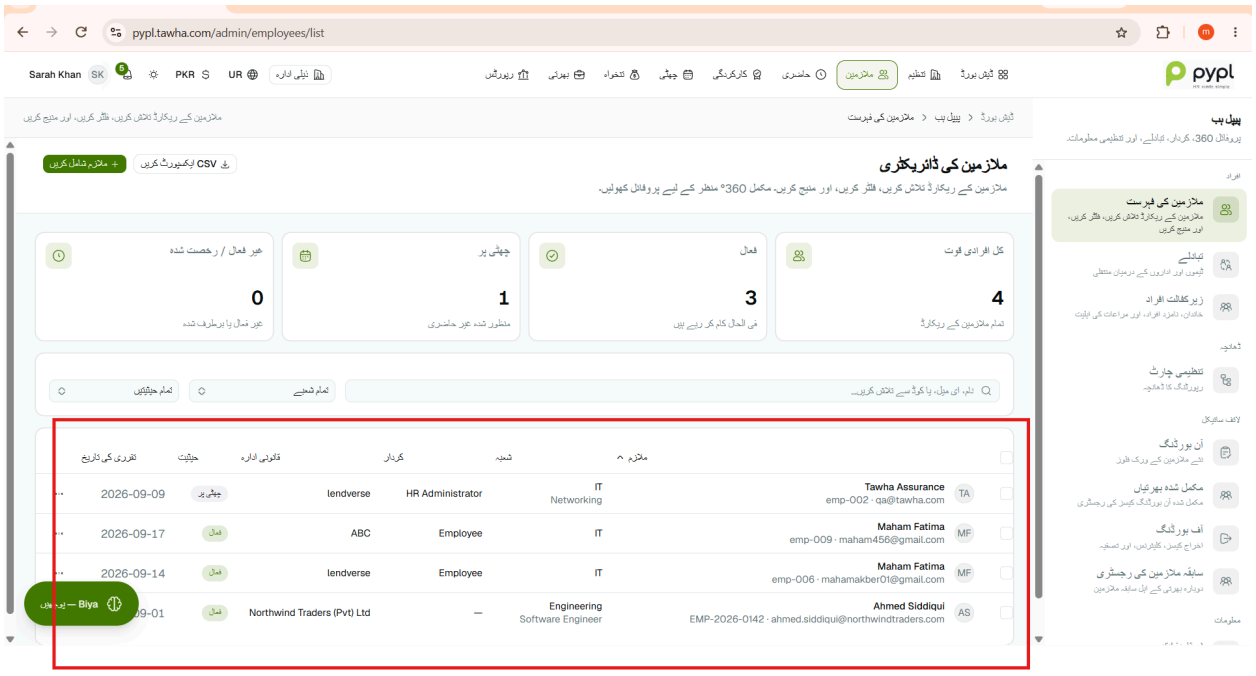
Description:
When the application is switched to **Urdu**, the Employee List table has both **alignment** and **translation** issues.

Issues:

1. **Column/row alignment issue**
    - Table column headers and their corresponding row values are not vertically aligned.
    - Employee data appears shifted relative to the column headings.
    - The RTL layout should maintain consistent alignment between each header and its values.
2. **Employee values remain in English**
    - Although the interface is translated into Urdu, several employee-related values are still displayed in English.
    - Examples include values such as:
        - `HR Administrator`
        - `Employee`
        - `IT`
        - `Engineering`
        - `Software Engineer`
        - `Active`
        - `On leave`

Expected Result:

- All table headers and corresponding values should be properly aligned in the **RTL/Urdu layout**.
- Employee-related system values that are translatable should be displayed in **Urdu** when Urdu is selected.
- The table should maintain consistent RTL alignment across headers, rows, badges, and other fields.



TICKET# 79:

Bug/Requirement: Auto-Generate Registration Number

Priority: Medium
Module: Organization → Legal Entities → Add Entity

Description:
The **Registration No.** field should not be manually entered by the user. The system should automatically generate a unique registration number when creating a new entity.

Expected behavior:

- Remove manual entry from the **Registration No.** field.
- Automatically generate a registration number when the **Add Entity** form is opened or when the entity is saved.
- Each registration number must be **unique**.
- Duplicate registration numbers must **not be allowed**, even if records are created simultaneously.
- The generated number should be saved with the entity and remain unchanged afterward.

- If a generated number already exists, the system should automatically generate another unique number.
- The field can be displayed as **read-only** so HR can see the generated number before saving.

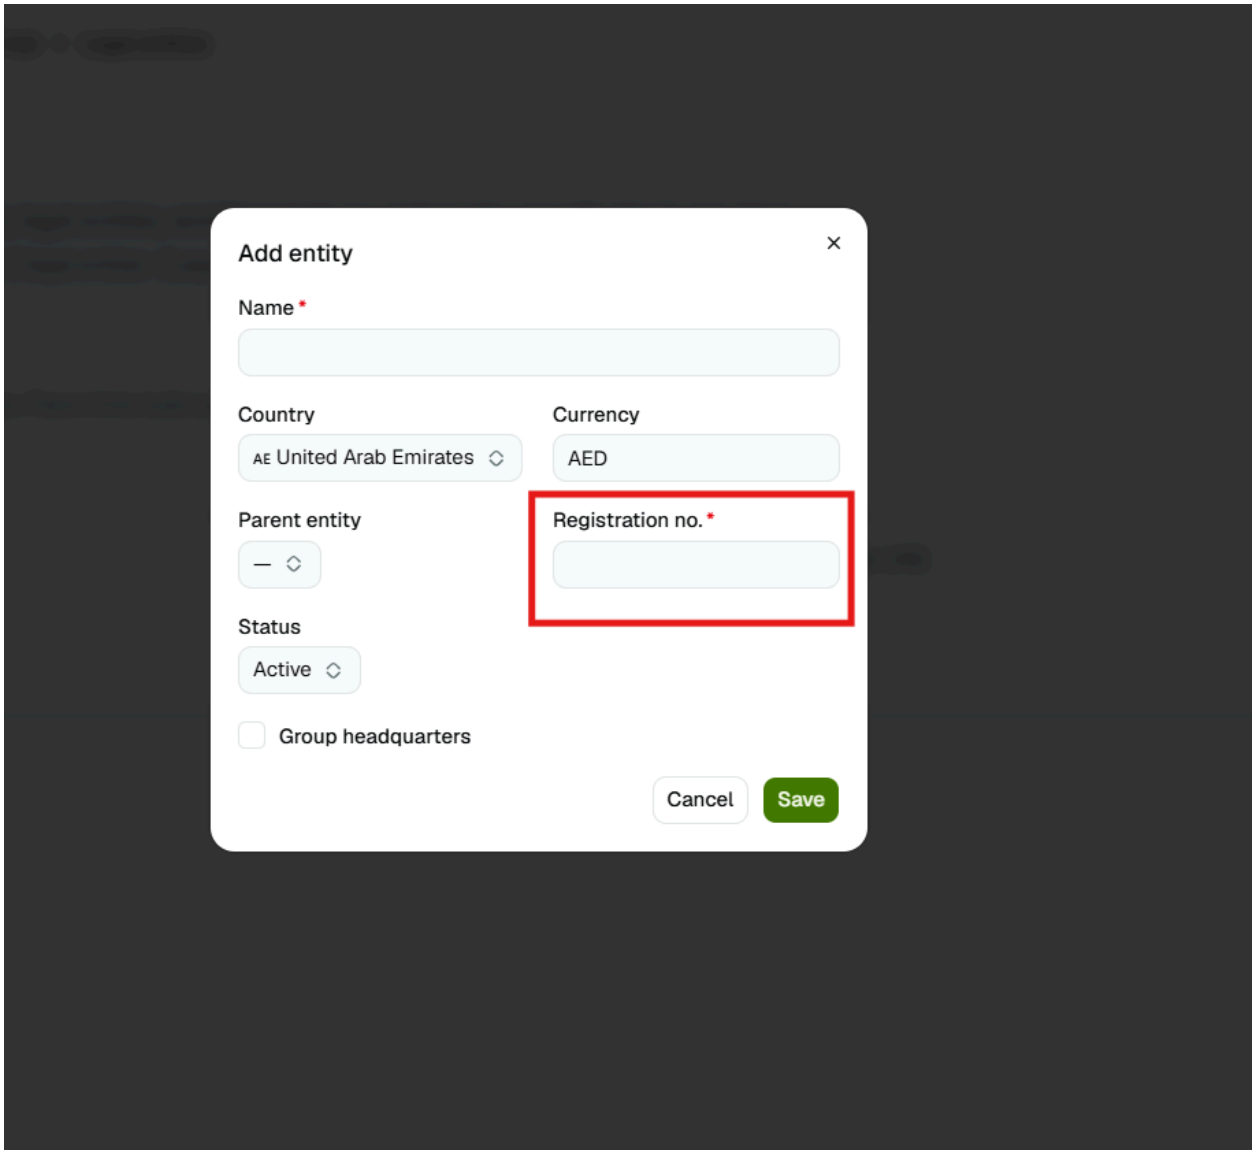
Example:

```
REG-2026-0001
REG-2026-0002
REG-2026-0003
```

Validation:

If a duplicate value somehow reaches the backend, the system must reject it and return a clear message such as:

> **Registration number already exists. Please try again.**



TICKET# 80:

Bug/Requirement: Currency Field Should Not Be Editable

Priority: Medium
Module: Organization → Legal Entities → Add Entity

Description:
The **Currency** field should be automatically determined based on the selected **Country** and should not be manually editable by the user.

Expected behavior:

- Make the **Currency** field **read-only/disabled**.
- When the user selects a **Country**, the system should automatically populate the corresponding currency.
- The currency should update automatically if the country is changed.
- The user should not be able to type, modify, or manually select a different currency.
- The saved entity should use the currency mapped to the selected country.

Example:

- Pakistan → **PKR**
- UAE → **AED**
- Saudi Arabia → **SAR**
- United States → **USD**

Validation:
Currency should be controlled by the country-to-currency mapping and validated on the backend as well, so users cannot submit an incorrect currency through API requests.

TICKET# 81:

Ticket: Headquarters & Parent Entity Logic

Priority: High
Module: Organization → Legal Entities → Add/Edit Entity

Description:
Implement proper headquarters and parent-entity logic for legal entities so that an organization can have **only one headquarters at a time**, while all branch/child entities are linked to that headquarters.

Expected Behavior

1. Creating the Headquarters

When creating the main company, for example **Tawha Technologies UAE**:

- **Group headquarters:** ☑ Checked
- **Parent entity:** Automatically remains **empty / None**
- The entity becomes the organization's **Headquarters**.
- A headquarters can exist **only once** at a time.

2. Creating Branch/Child Entities

When creating another entity, for example:

- Tawha Technologies Pakistan
- Tawha Technologies Canada
- Tawha Technologies Qatar

The **Parent entity** dropdown should show **only the current Headquarters**.

Example:

Parent entity

[Tawha Technologies UAE ▼]

It should **not** show other child/branch entities.

The **Group headquarters** checkbox should be **disabled** because a headquarters already exists.

3. Headquarters Checkbox

The checkbox should behave as follows:

Scenario	Headquarters checkbox	Parent entity
First/main entity	Enabled	Empty
Existing headquarters	Checked	Empty
New branch	Disabled	Headquarters only
Existing child entity	Disabled	Existing headquarters

Headquarters being changed	Enabled after old HQ is unchecked	Can become new HQ

4. Changing the Headquarters

If the organization wants to move the headquarters from UAE to Pakistan:

Step 1: Edit **Tawha Technologies UAE**
→ Uncheck **Group headquarters**
→ Save.

Step 2: Edit/create **Tawha Technologies Pakistan**
→ **Group headquarters** checkbox becomes available
→ Check it
→ Save.

Pakistan is now the new headquarters.

5. Important Validation

The backend must enforce:

- **Only one headquarters per organization/group.**
- A headquarters **cannot have a parent entity**.
- A child/branch **must have a valid headquarters as its parent**.
- Child entities cannot be selected as the parent of another entity if the intended hierarchy is headquarters → branches.
- If another user/process attempts to create a second headquarters simultaneously, the system must reject it.
- Changing headquarters should update the parent relationship/options consistently across all entities.

UI Recommendation

For a branch, the form should look like:

Name *

[Tawha Technologies Pakistan]

Country

[🇵🇰 Pakistan ▼] Currency

[PKR]

Parent entity

[Tawha Technologies UAE ▼]

Registration no.

[REG-2026-0002] ← Auto-generated / read-only

Status

[Active ▼]

Group headquarters

[✓/disabled]

For the existing headquarters:

Name *

[Tawha Technologies UAE]

Country

[🇦🇪 United Arab Emirates ▼]

Parent entity

[—] ← Disabled/empty

Registration no.

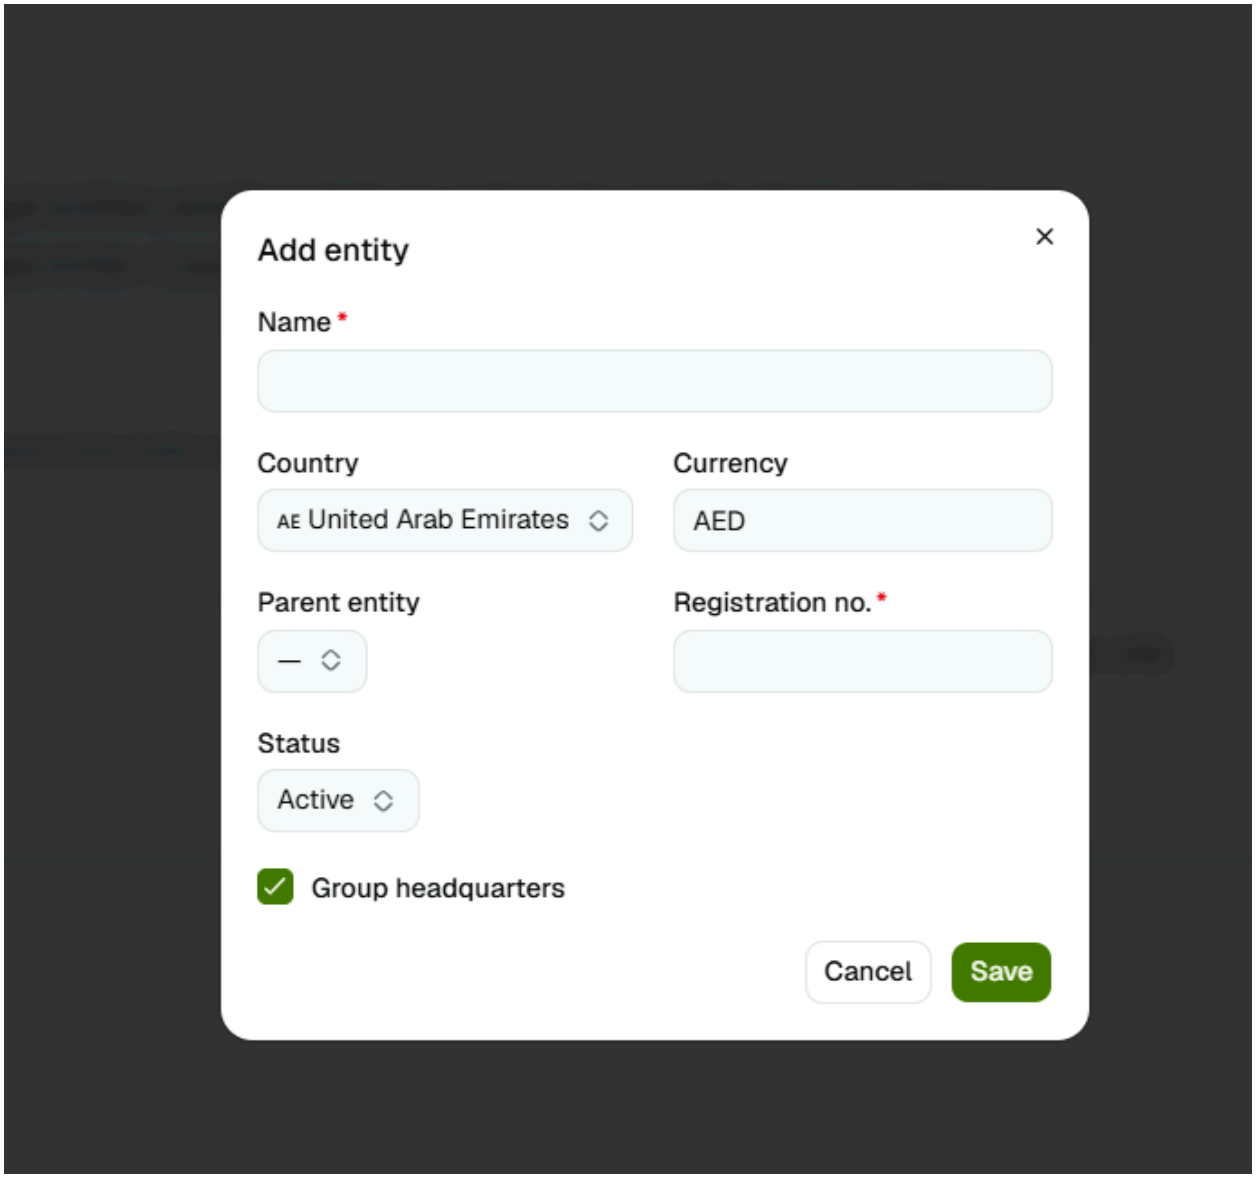
[REG-2026-0001] ← Auto-generated / read-only

Status

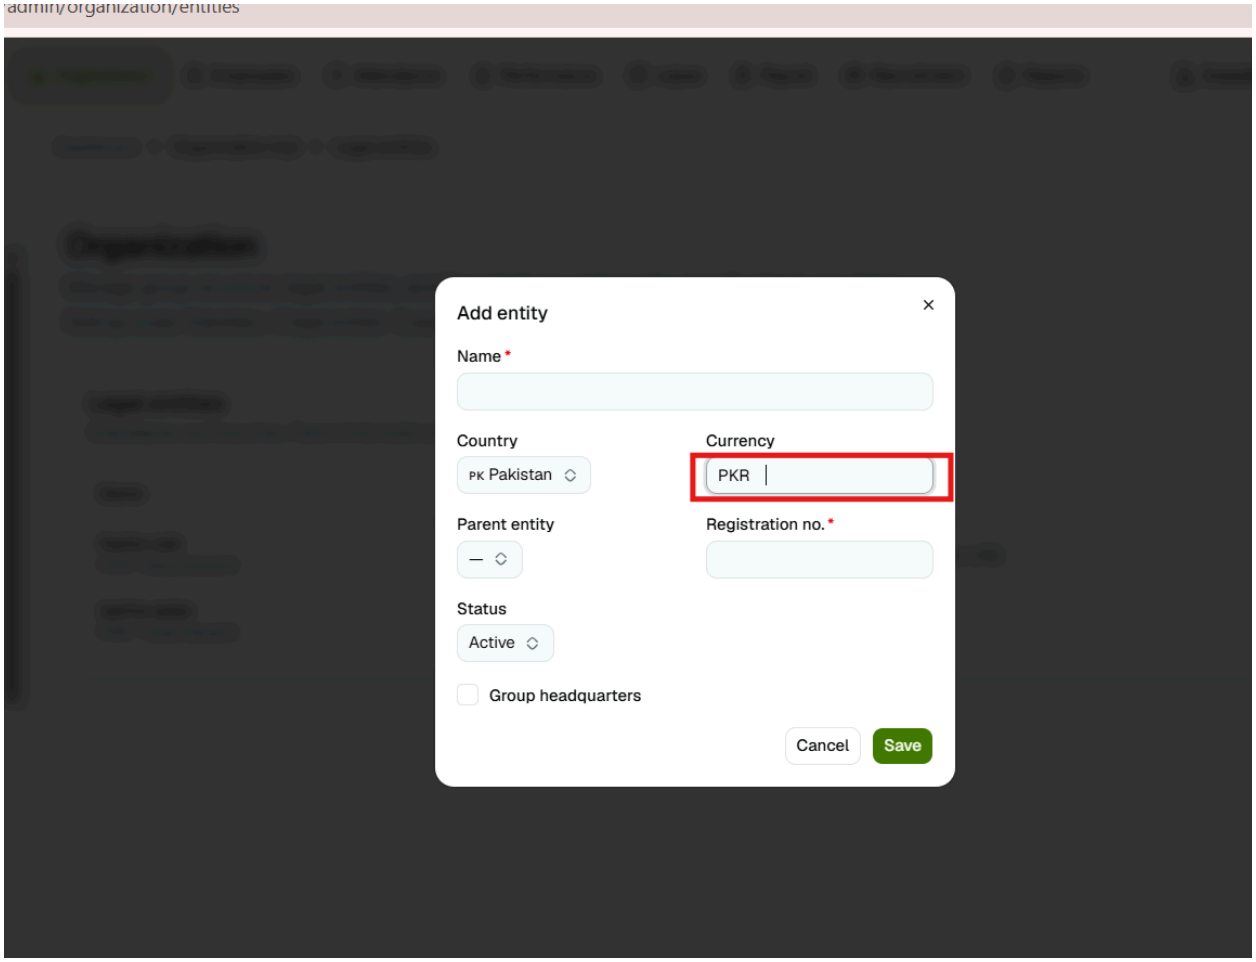
[Active ▼]

Group headquarters

[✓]



Add entity
Name *
Country
AE United Arab Emirates
Currency
AED
Parent entity
—
Registration no. *
Status
Active
Group headquarters
Cancel
Save



TICKET# 82:

Ticket: Reposition Ask Biya Widget to Avoid Blocking Actions

Priority: Medium
Module: Organization → Structure → Sub-departments

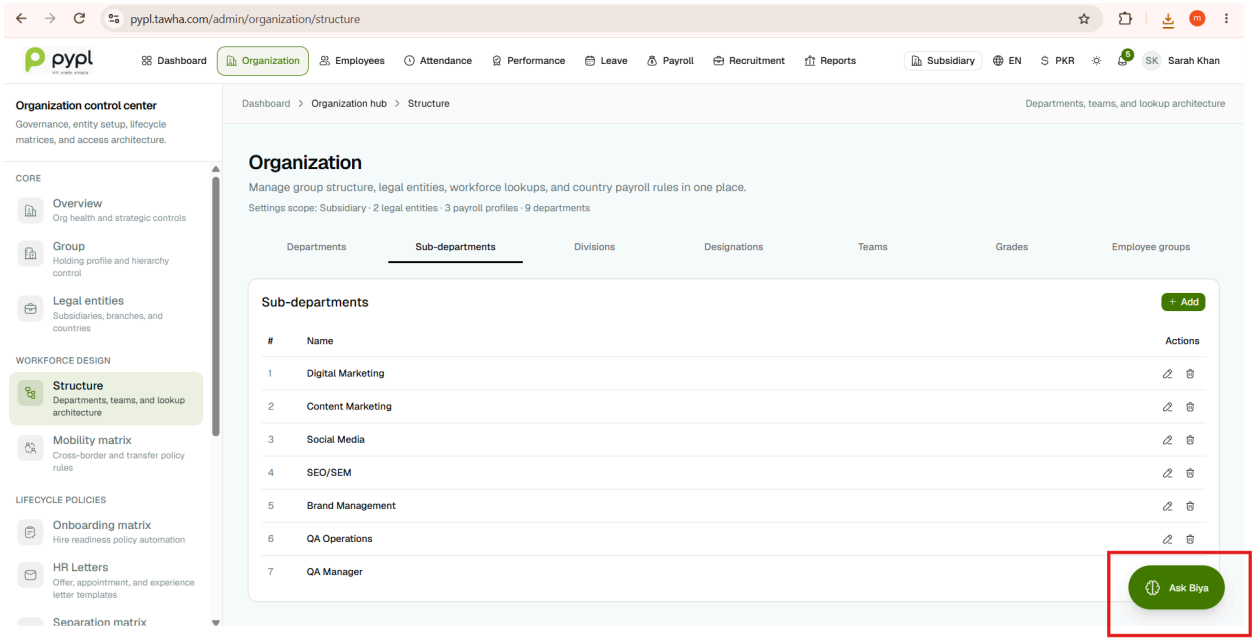
Description:
The floating **Ask Biya** button is currently positioned over the bottom-right area of the sub-departments table. It overlaps the **Edit/Delete action icons**, making it difficult or impossible to manage records such as **QA Manager**.

Expected behavior:

- Move the **Ask Biya** floating button from the **bottom-right corner to the bottom-left side** of the screen.
- Ensure it does not overlap:

    - Edit icons
    - Delete icons
    - Table rows
    - Add buttons
    - Any other primary UI controls
- The widget should remain visible and accessible while scrolling.
- Maintain sufficient spacing from the sidebar so it does not overlap the navigation.
- The position should remain consistent across all Organization pages.

Specific issue shown:
The **QA Manager** row has Edit/Delete actions on the right, but the Ask Biya button overlaps this area.



TICKET# 83:

Ticket: Translate Organization Structure Values into French

Priority: Medium

Description:
When the application language is switched to **French (FR)**, all organization structure values should also be displayed in French. Currently, the interface labels are translated, but the configured values under the structure tabs are still displayed in English.

Affected tabs:

- Departments
- Sub-departments
- Divisions
- Designations / Job Titles
- Teams
- Grades
- Employee Groups

Expected behavior:

- When language is set to **English**, organization values remain in English.
- When language is set to **French**, organization values should display their French translations.
- This should apply consistently across all organization structure tabs.
- Newly created values should also support French translation.
- Switching between English and French should not create duplicate records; only the displayed language should change.

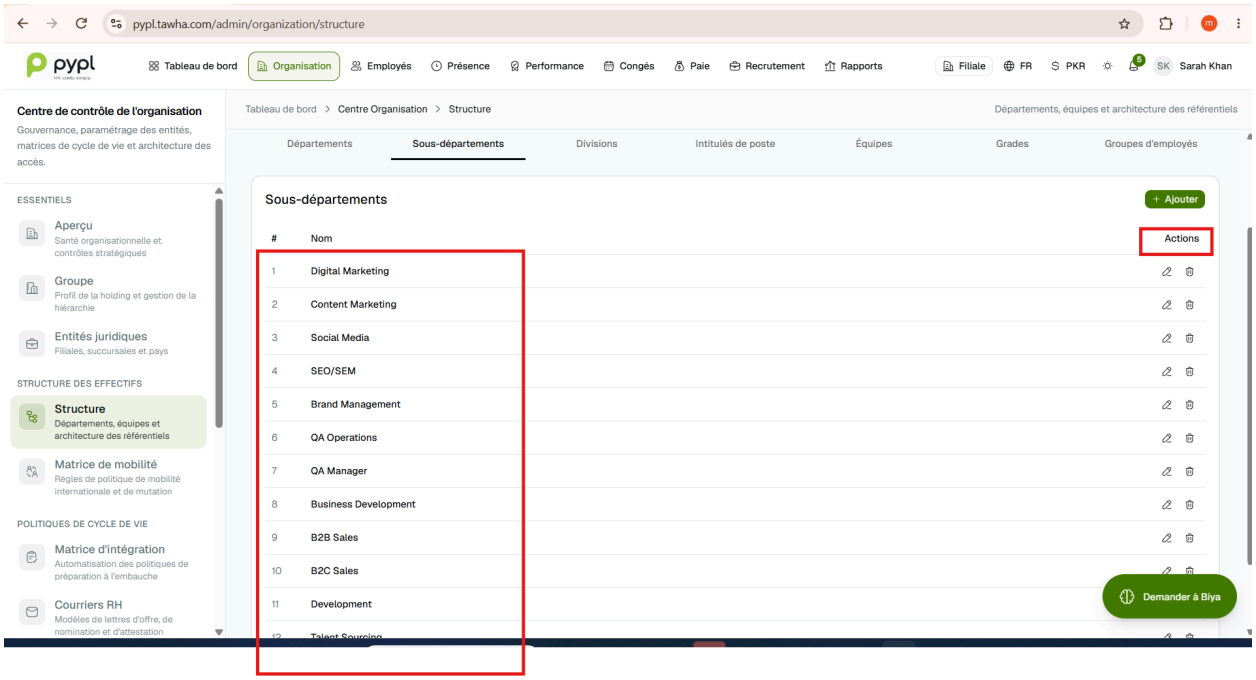
Example:

English	French
Digital Marketing	Marketing digital
Content Marketing	Marketing de contenu
Social Media	Réseaux sociaux
Brand Management	Gestion de la marque
Business Development	Développement commercial

B2B Sales	Ventes B2B
Development	Développement
Talent Sourcing	Recherche de talents
Employee Groups	Groupes d'employés
Teams	Équipes
Departments	Départements
Sub-departments	Sous-départements
Divisions	Divisions
Designations	Intitulés de poste
Grades	Niveaux

Acceptance Criteria:

All organization structure tabs and their configured values must correctly support and display the selected application language, including French.



TICKET# 84:

Ticket: Complete French Localization for Dependants Module

Priority: Medium

Description:
When the application language is switched to **French (FR)**, the entire **Dependants** module should be fully localized. Currently, the page UI is partially translated, but several dependant-related values and action labels remain in English.

Affected areas:

- Dependants table
- Add Dependant form
- Edit Dependant form
- Relationship dropdown
- Beneficiary status
- Filters/search options
- Table column headers
- Action buttons and tooltips

Expected behavior:

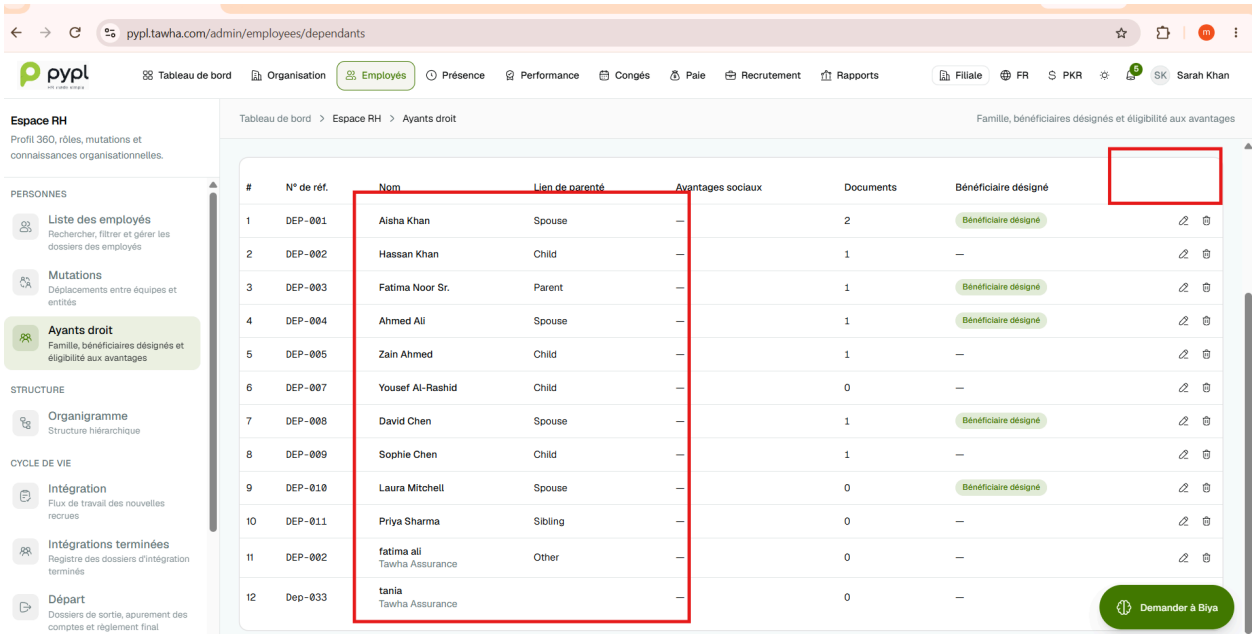
When **French (FR)** is selected:

English	French
Reference No.	N° de réf.
Name	Nom
Relationship	Lien de parenté
Social Benefits	Avantages sociaux
Documents	Documents
Designated Beneficiary	Bénéficiaire désigné
Actions	Actions
Spouse	Conjoint(e)
Child	Enfant
Parent	Parent

Sibling	Frère / Sœur
Other	Autre
Edit	Modifier
Delete	Supprimer

Functional requirements:

- All static labels must use the French translation.
- All predefined dependant relationship values must display in French.
- Existing dependant records must also display their values in French when FR is selected.
- Add/Edit dependant forms and dropdowns must use French translations.
- **Edit** and **Delete** action tooltips/buttons must be localized.
- The **Actions** column header must be included in the localization system and display correctly as `Actions`.
- Switching between English and French must not create duplicate records or modify the underlying data.
- The same dependant record should simply display according to the currently selected language.
- Localization should be applied consistently throughout the entire Dependants module.



TICKET# 85:

Ticket: Exported Reports Not Translated to French

Priority: High

Description:
When the application language is set to **French (FR)**, employee reports are correctly displayed in French on the web interface, but the generated **PDF, Excel, and Word reports are still generated with English labels and values**, even when the user generates the report while the application is in French.

Affected formats:

- PDF
- Excel
- Word

Expected behavior:

When the application language is set to **French (FR)**:

- Generate PDF → report should be completely in French.
- Generate Excel → report should be completely in French.
- Generate Word → report should be completely in French.

The export process should use the **currently selected application language**, rather than always using English as the default export language.

Example

If the UI is in French:

Web UI:

> Générer le rapport des employés

Generated PDF/Excel/Word should contain:

- **Rapport des employés**
- **Nom**
- **Département**
- **Sous-département**
- **Intitulé du poste**
- **Équipe**
- **Groupe d'employés**
- **Statut**
- **Date d'embauche**
- **Entité juridique**
- **Date de naissance**
- **Adresse e-mail**
- **Numéro de téléphone**

Instead of:

- Employee Report
- Name
- Department
- Sub-department
- Designation
- Team
- Employee Group
- Status
- Hire Date
- Legal Entity
- Date of Birth
- Email
- Phone Number

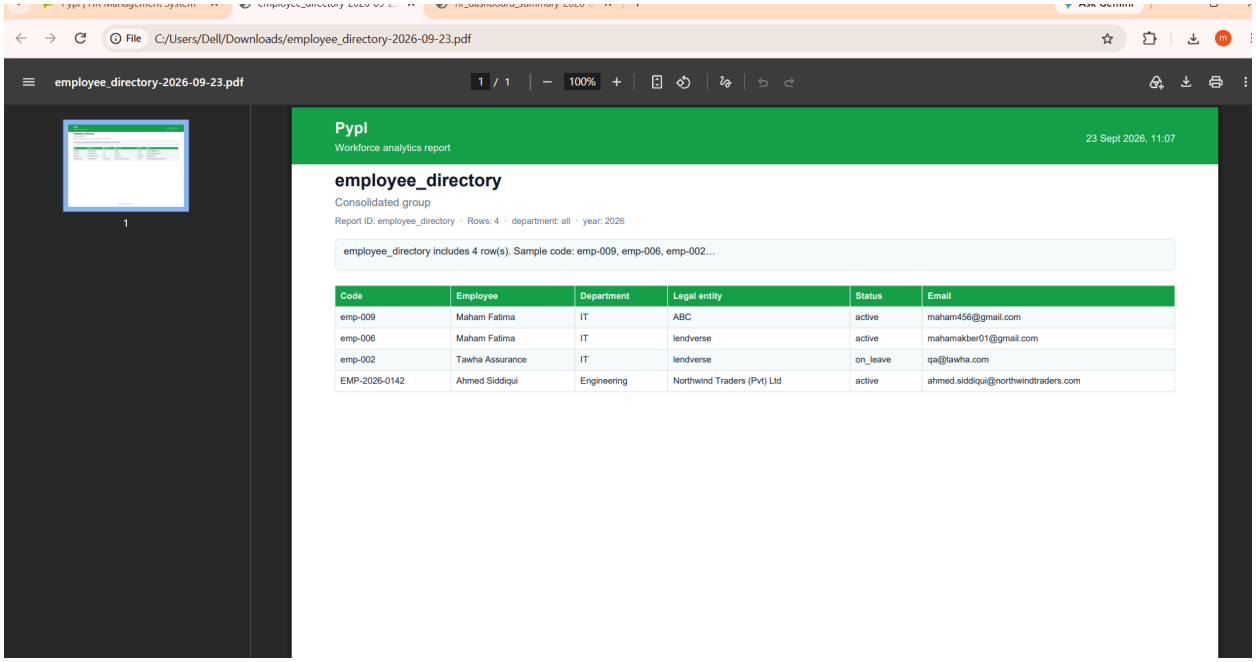
Important requirement

The export must **not depend on the language of the prompt or manually entered text**. It should automatically detect the application's active locale.

FR selected → French export
EN selected → English export

This should apply consistently to **report title, column headers, field labels, predefined values, statuses, organization values, dates, and other static text** in PDF, Excel, and Word exports.

Acceptance Criteria:
PDF, Excel, and Word exports must use the same language/locale currently selected in the application and must not fall back to English when French is selected.



TICKET# 86:

Ticket: Saved Reports Not Fully Translated to French

Priority: Medium

Description:
When the application language is set to **French (FR)**, the **Saved Reports** page should display all interface text, report metadata, labels, and system-generated content in French.

Currently, the page is partially translated, but report names and descriptions such as `employee_directory`, `new_joiners`, and English descriptions are still displayed in English.

Expected French translations

Current	French

Saved Reports	**Rapports enregistrés**
Saved Library	**Bibliothèque enregistrée**
Name	**Nom**
Report Type	**Type de rapport**
Last Run	**Dernière exécution**
Actions	**Actions**
Re-run	**Réexécuter**
Rename	**Renommer**
Duplicate	**Dupliquer**
Copy Share Link	**Copier le lien de partage**
History	**Historique**
Delete	**Supprimer**

Employee Directory	**Annuaire des employés**
New Joiners	**Nouvelles embauches**
Turnover Rate	**Taux de rotation**

Important

The **report names and descriptions** should also be localized.

For example:

Current:

> `employee_directory`
> I want to generate the report of beauty products

French:

> **Annuaire des employés**
> Générer un rapport sur les employés

And:

Current:

> `new_joiners`
> Provide a report of all new joiners joined in 2026

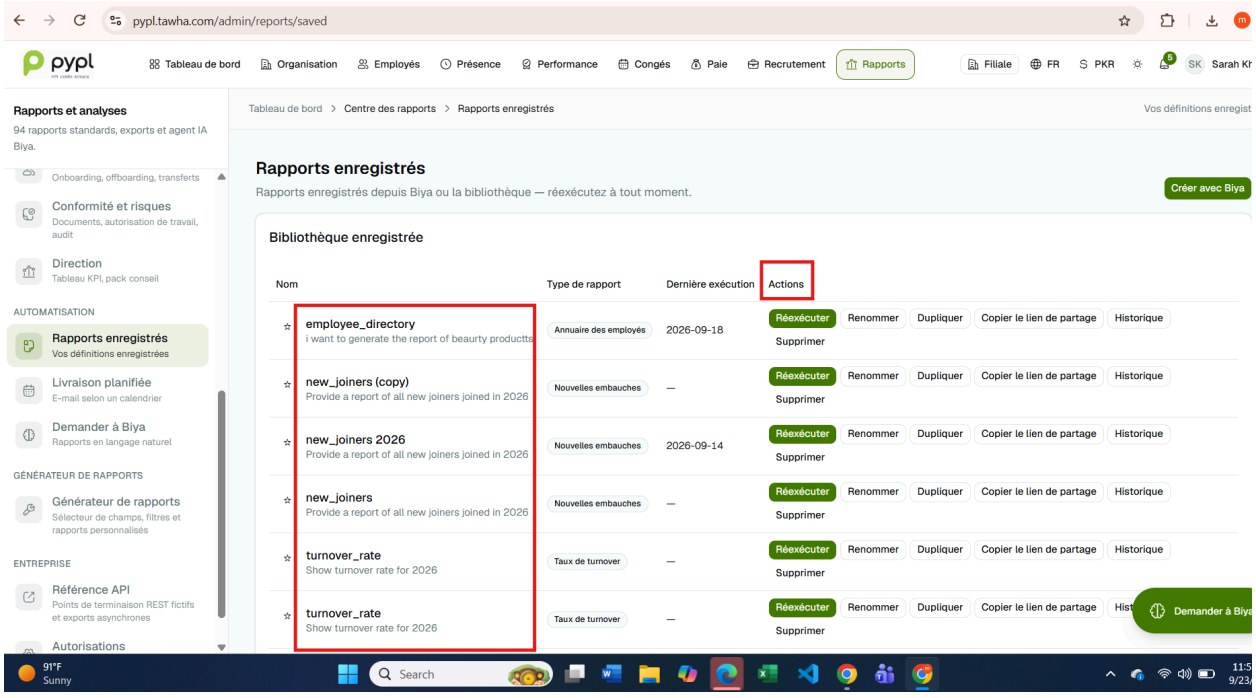
French:

> **Nouvelles embauches**
> Générer un rapport sur toutes les nouvelles recrues ayant rejoint l'entreprise en 2026

Acceptance Criteria

When **FR** is selected:

- All page headings are in French.
- All table headers are in French.
- All buttons/actions are in French.
- Report types are in French.
- Saved report names are localized.
- Report descriptions are localized.
- System-generated text is localized.
- Any newly created report should inherit the currently selected language.
- Switching back to **EN** should display the English equivalents.
- No English text should remain in the French interface unless it is a proper brand/product name or user-entered content.



TICKET# 87:

Ticket: Urdu Localization & Employee Table Alignment Issues

Priority: Medium

Description:

When the application language is set to **Urdu (UR)**, the Employee Directory page is not fully translated. Several labels, employee data values, and table content are still

displayed in English. In addition, the table headers are not vertically aligned with their corresponding row values, making the table difficult to read.

Required Changes

1. Complete Urdu translation

- Translate all Employee Directory page labels into Urdu.
- Translate table headers, filters, buttons, status labels, and supporting text.
- Employee-related system values should also use Urdu where applicable.
- Do not leave English UI text when Urdu is selected, except for proper names, company names, email addresses, employee IDs, etc.

2. Fix table column alignment

- Each column header must align exactly with the corresponding column values below it.
- Header and row cells must use the same column/grid structure.
- Right-to-left (RTL) layout must be properly applied for Urdu.
- Ensure employee names, department, role, legal entity, status, and hire date remain under their correct headers.
- Row content should not shift horizontally based on text length.
- Maintain consistent column widths and spacing across all rows.

3. Proper Urdu RTL behavior

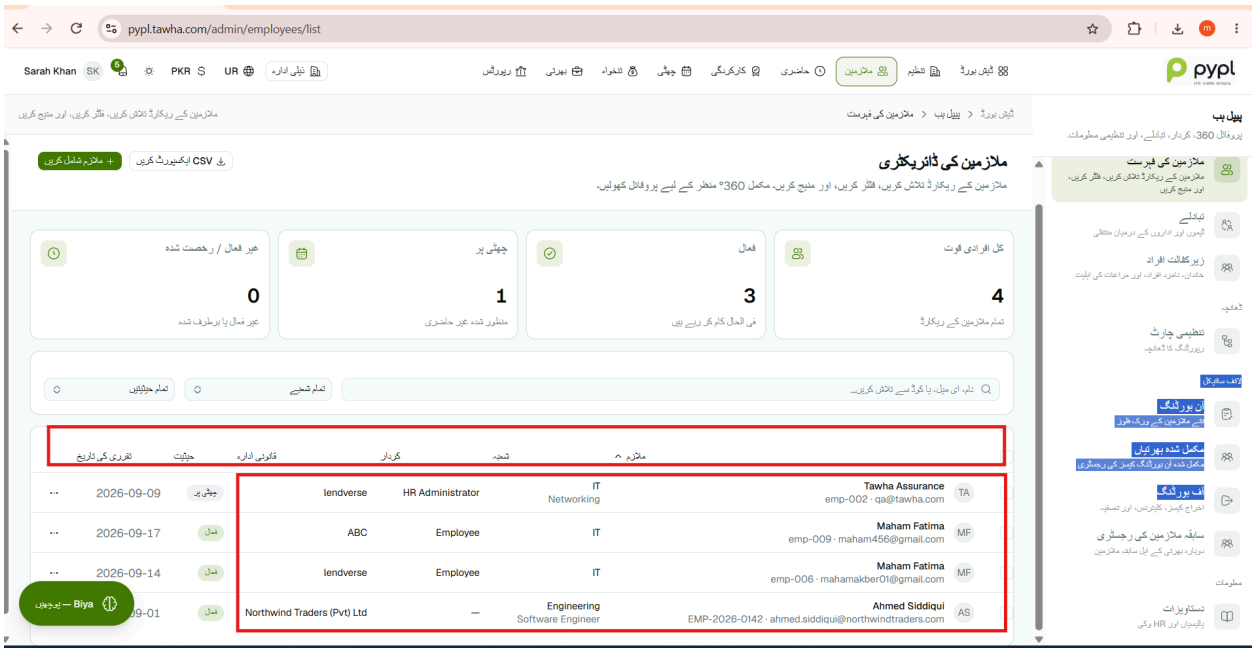
- Apply `dir="rtl"` to the Urdu page/table.
- Text should flow from right to left.
- Numeric values such as dates, employee IDs, and counts can retain their appropriate numeric formatting.
- Icons/actions should remain consistently positioned without breaking the RTL layout.

Acceptance Criteria

When **UR** is selected:

> **Employee Directory** → **مکمل طور پر اردو میں**

The entire table should be properly translated and structured, with **every header directly aligned with its corresponding data column**.



TICKET# 88:

Ticket: Urdu Localization & Table Alignment – Dependants Module

Priority: Medium

Description:
When the application language is set to **Urdu (UR)**, the Dependants table is only partially translated. Some headers are in Urdu, while record values such as **Spouse, Child, Parent** and employee/dependant names remain in English. The table also has an RTL alignment issue where the headers do not consistently align with their corresponding row values.

Required Changes

1. Complete Urdu translation

- Translate all table headers and UI labels into Urdu.
- Translate relationship values:
  - Spouse → شریکِ حیات
  - Child → بچہ
  - Parent → والدین
  - Sibling → بہن بھائی
  - Other → دیگر

- Translate status/badge values such as **Designated Beneficiary** into Urdu.
- Keep proper names, employee IDs, reference numbers, email addresses, etc. unchanged where translation is not appropriate.

2. Fix RTL table alignment

- Apply proper **RTL direction** to the complete table.
- Headers and row values must use the **exact same column structure**.
- Each header must sit directly above its corresponding data.
- The #, reference number, name, relationship, benefits, documents, beneficiary, and actions columns must remain consistently aligned.
- Do not allow long names or values to shift other columns.

3. Actions column

- The Actions column should also have a proper Urdu label, e.g. **کارروائیاں**.
- Edit and Delete icons should remain consistently aligned within this column.
- Do not let the floating **Biya** button overlap or block the actions.

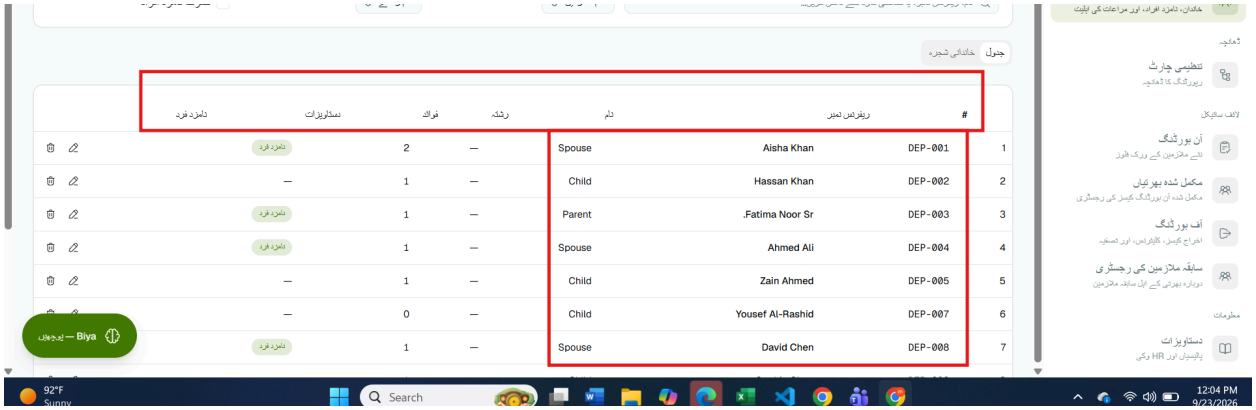
4. Consistency
Apply the same localization and RTL table behavior across **all HR/Employee modules**, not just this Dependants page.

Acceptance Criteria

When **UR** is selected, the Dependants page should be completely RTL and properly localized:

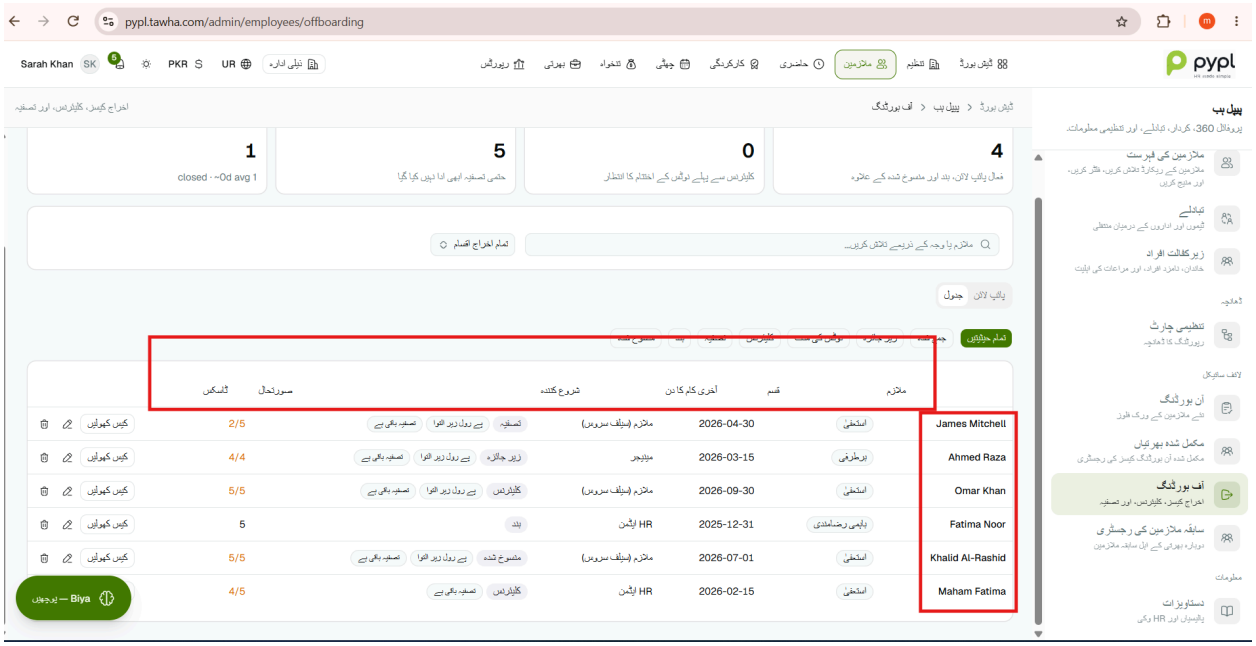
 # | کارروائیاں | نامزد فائدہ اٹھانے والا | دستاویزات | فوائد | رشتہ | نام | حوالہ نمبر

The headers must align vertically with the correct values in every row, with no English UI values remaining where a translated Urdu equivalent is expected.

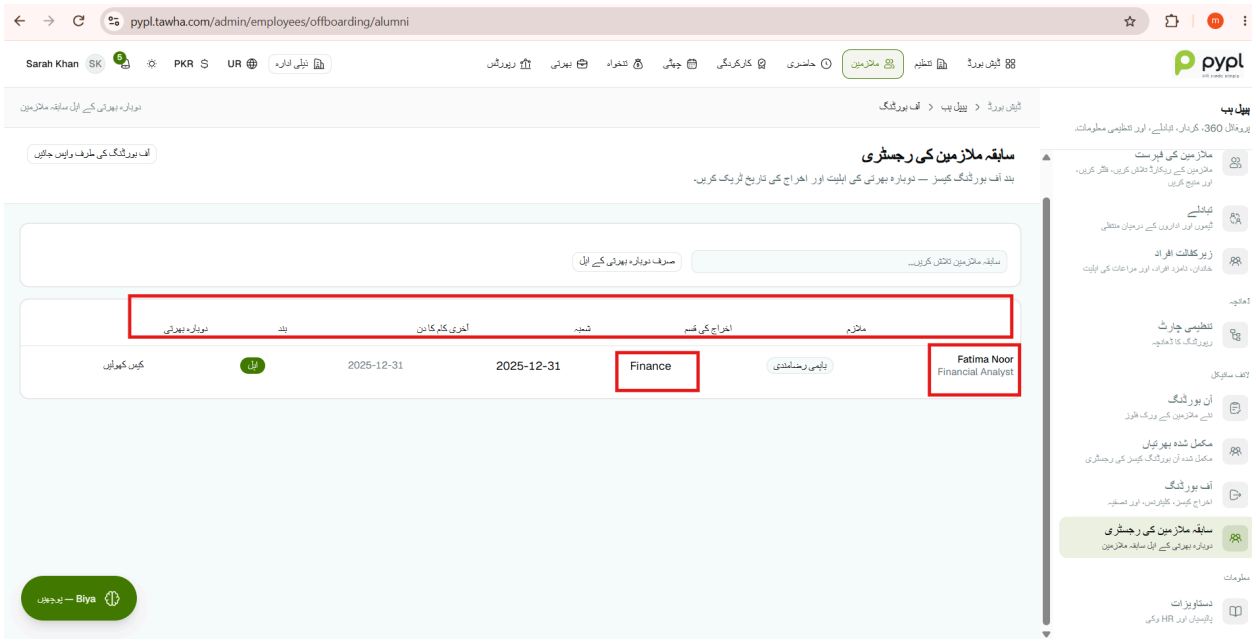


Similar in this

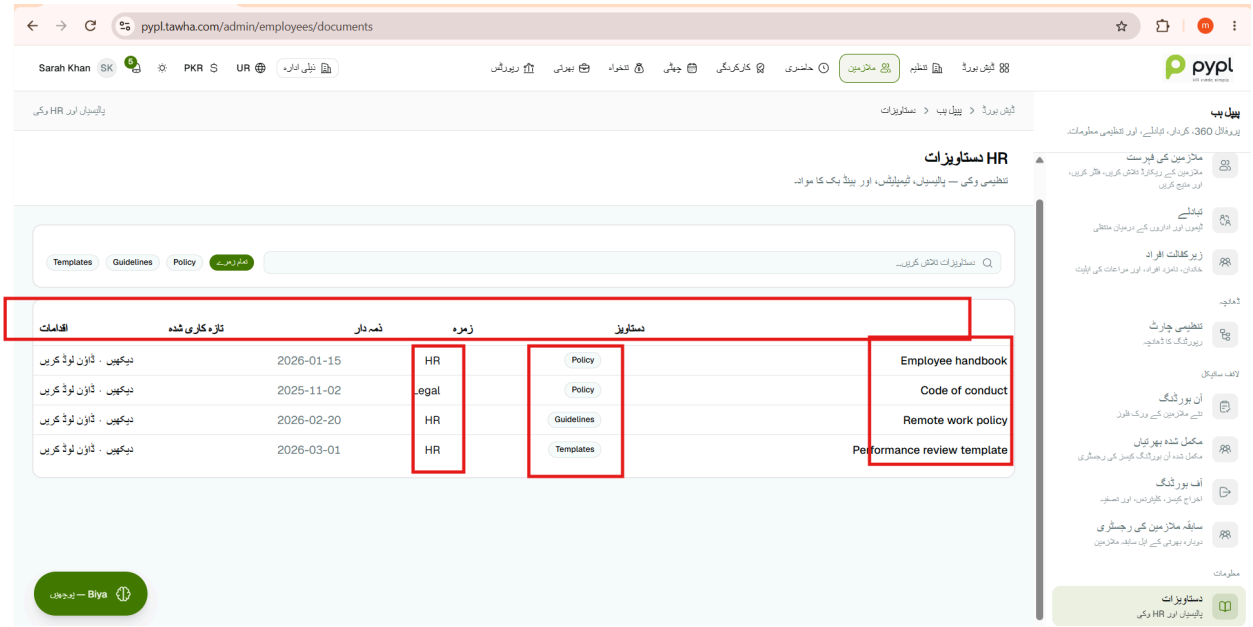
In this too



Similarly,



In this too,



TICKET# 89:

Ticket: Report Export Language Not Following Selected Urdu Language

Priority: High

Description:
When the application language is set to **Urdu (UR)** and the user generates a report using AI in Urdu, the AI response/prompt is correctly handled in Urdu. However, the generated **PDF, Excel/CSV, and Word files are still produced in English**.

The selected application/report language must be carried through to the actual exported file content.

Expected Behavior

If the user selects **Urdu (UR)** and requests:

> ملازمین کی رپورٹ تیار کریں

The generated files should contain the report in **Urdu**, including:

- Report title
- Column headers

- Field labels
- Status values
- Department names where translation is applicable
- Relationship/type values where applicable
- Summary information
- Filters/criteria shown in the report
- Any generated descriptions or supporting text

Export Formats

This must work consistently for:

- **PDF**
- **Excel (.xlsx)**
- **CSV (.csv)**
- **Word (.docx)**

Important Requirement

The export engine should **not default to English** just because the underlying employee/report data is stored in English.

The export language should follow the user's currently selected application/report language:

Selected Language	Generated Report
English (EN)	English
Urdu (UR)	Urdu
French (FR)	French

Urdu Example

Instead of generating:

Employee Directory
Employee Name | Department | Role | Status | Hire Date

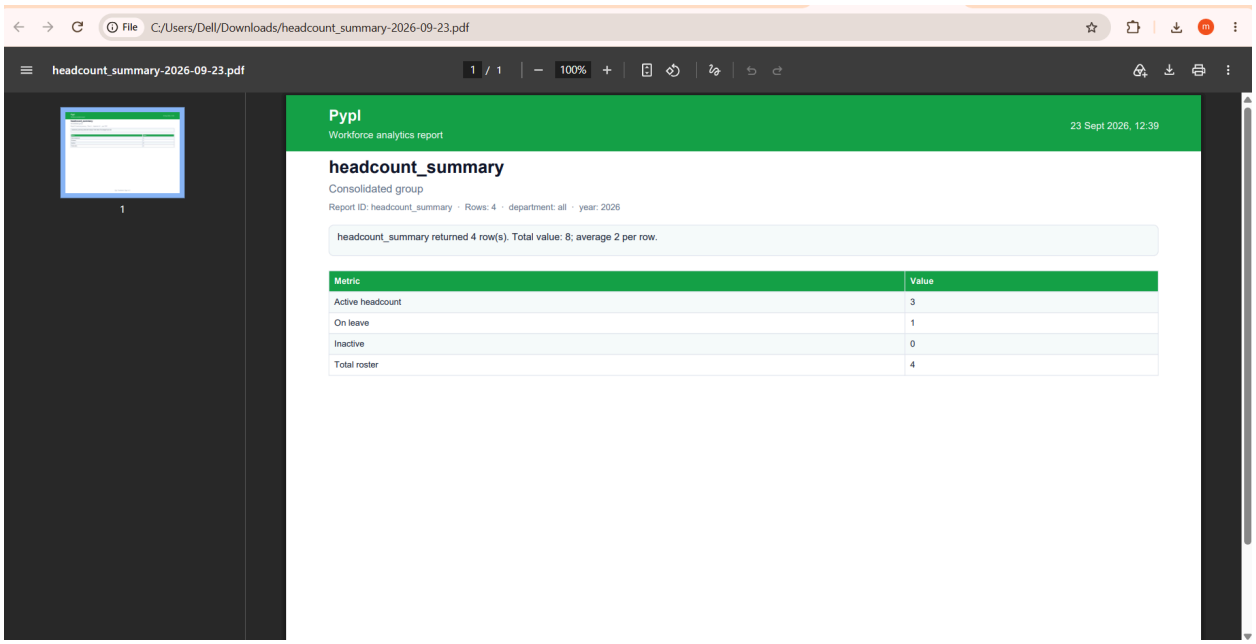
It should generate:

ملازمین کی ڈائریکٹری
ملازم کا نام | شعبہ | عہدہ | حیثیت | ملازمت کی تاریخ

Additional RTL Requirement

For **PDF, Word, and Excel**, Urdu exports must properly support **RTL (right-to-left) formatting**. Text should not appear reversed, misaligned, or mixed incorrectly with English.

Acceptance Criteria:
When UR is selected, generating/exporting the same report in PDF, Excel/CSV, or Word must produce the file in **Urdu with correct RTL formatting**, rather than English.



TICKET# 90:

Ticket: Fix RTL Direction in Urdu CSV/Excel Export

Priority: Medium

Description:
When the report is generated in Urdu, the CSV contains Urdu text, but the exported spreadsheet is displayed from **left to right**. The table should be structured and displayed from **right to left** when Urdu is selected.

Expected Behavior

When language = **Urdu (UR)**:

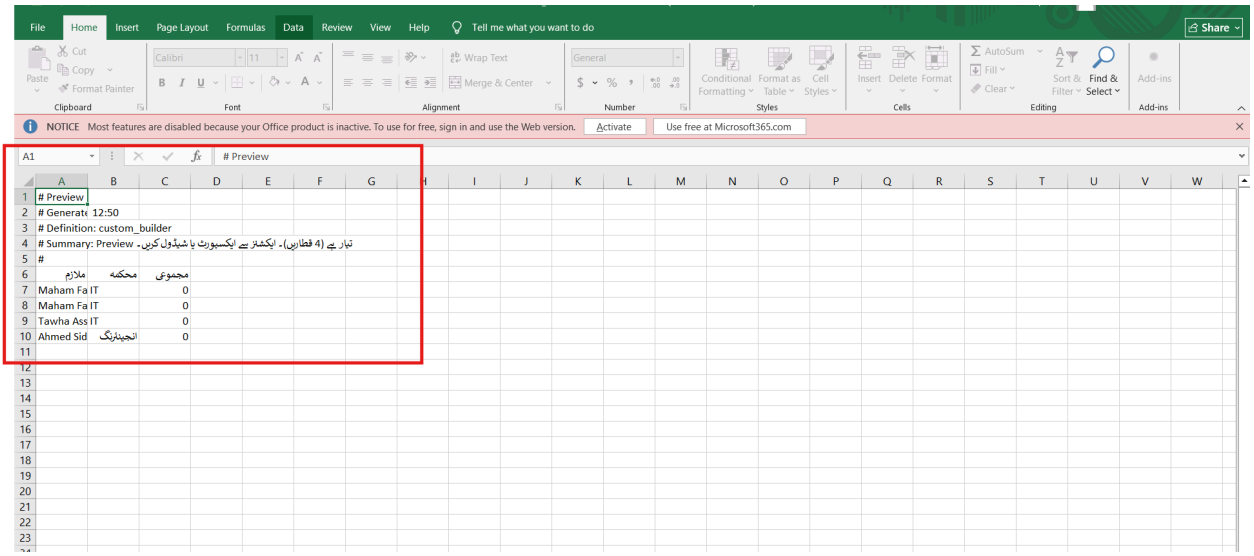
- The spreadsheet should use **RTL sheet direction**.
- The first/primary column should begin from the **right side**.
- Column headers should flow from right → left.
- Urdu text should be **right-aligned**.
- Urdu values should remain properly readable and connected.
- Column order should follow the RTL layout rather than simply placing Urdu text inside an LTR table.
- The report title/summary should also follow RTL formatting.
- Numbers can retain standard numeric formatting.
- Employee names, IDs, emails, and other values that should remain in Latin characters should not be incorrectly translated.

For example, instead of:

A → ملازم | B → محکمہ | C → مجموعی

the Urdu report should visually start from the right:

ملازم ← محکمہ ← مجموعی



TICKET# 91:

Bug Ticket: Commission Model Field Automatically Restores Deleted Value

Module: Organization → Third Parties
Screen: Add Third Party

Issue:
The **Commission model** field is currently behaving incorrectly. When the user tries to remove the existing `percent` value, the system automatically adds `percent` back into the field.

Steps to Reproduce:

1. Navigate to **Organization → Third Parties**.
2. Open **Add Third Party**.
3. Locate the **Commission model** field.
4. Try to delete/remove the existing `percent` value.
5. Observe that `percent` automatically appears again.

Expected Result:

- Commission model should be a **dropdown/select field**, not a free-text input.
- Available options should be:
    - **Percent**
    - **Fixed amount**

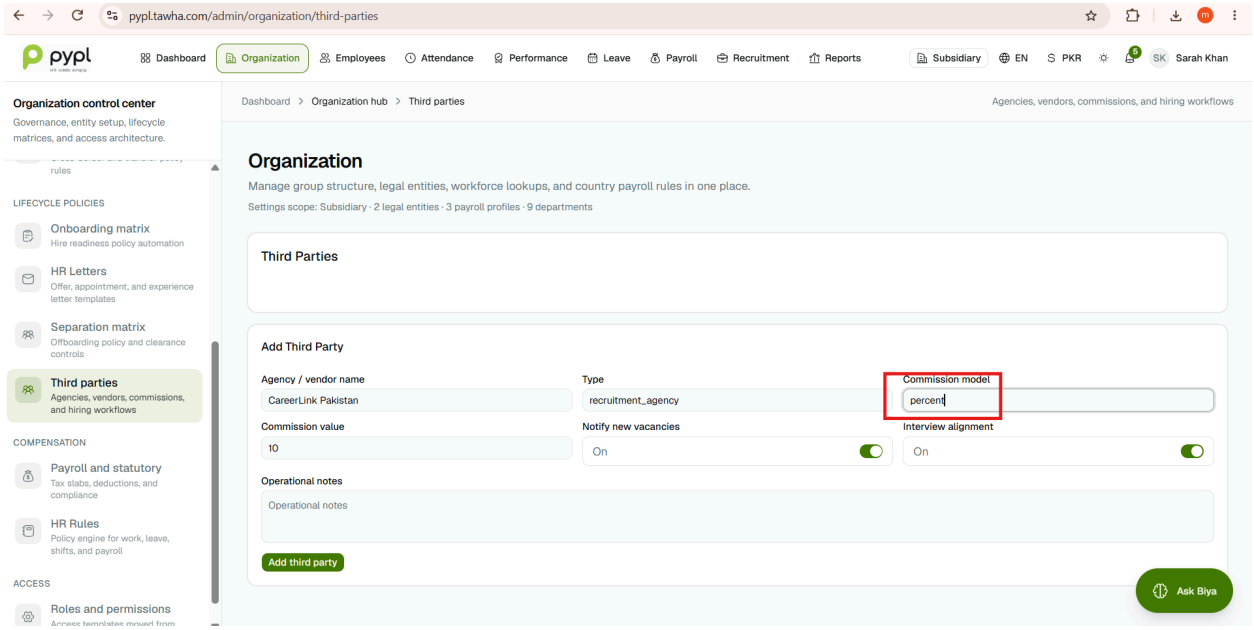
- The default value may be **Percent**.
- The user should be able to select a different option without the system automatically restoring the previous value.
- The field should not allow arbitrary text entry.

Commission Value Validation:

- If **Percent** is selected → allow percentage values such as `10` or `12.5`.
- If **Fixed amount** is selected → allow monetary values such as `50,000` or `100,000`.

Actual Result:
When `percent` is deleted, it is automatically populated again, preventing the user from clearing or changing the value properly.

Priority: Medium
Type: Functional / UI Validation Bug



It gives an error message:

TICKET# 92:

Ticket: Commission Value Accepts Negative Values

Module: Organization → Third Parties
Screen: Add Third Party

Issue:
The **Commission Value** field currently accepts negative numbers, which should not be allowed because a commission cannot have a negative value.

Steps to Reproduce:

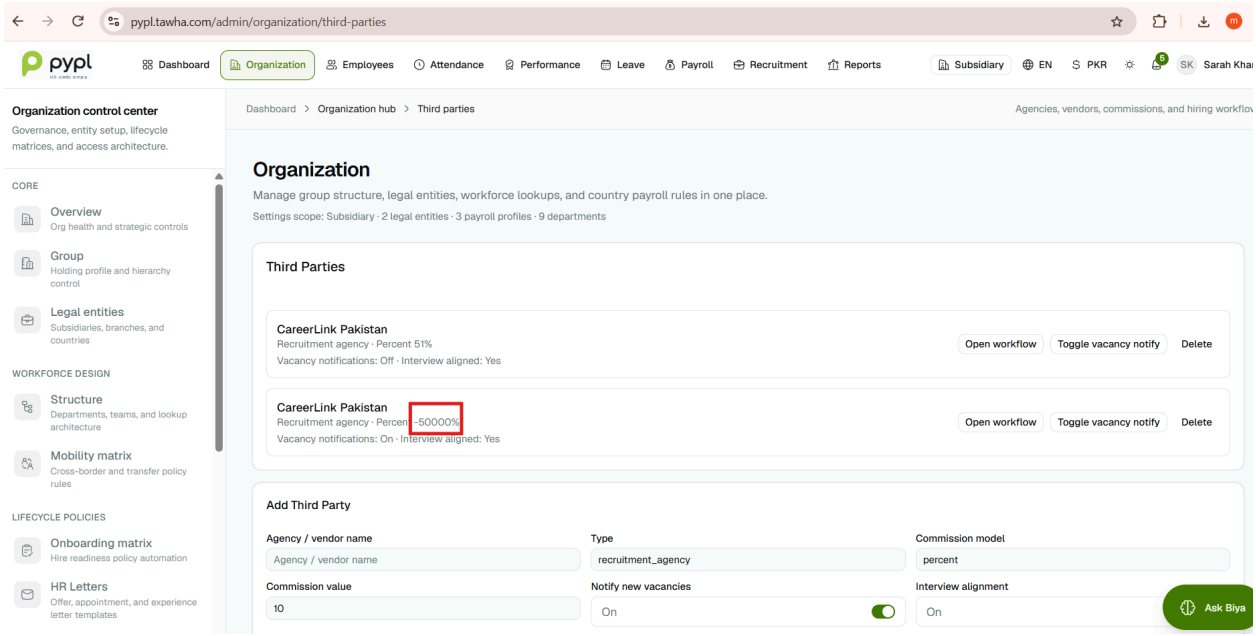
1. Navigate to **Organization** → **Third Parties**.
2. Go to **Add Third Party**.
3. Enter a negative value in the **Commission Value** field, e.g. `-10`.
4. The system accepts the negative value.

Expected Behavior:

- The **Commission Value** field should accept **only positive numeric values**.
- Negative values such as `-10`, `-5%`, etc. should be rejected.
- If the user enters a negative value, display a validation message such as:
  "Commission value must be greater than or equal to 0."
- The **Save/Add Third Party** action should remain disabled or prevent submission until the value is corrected.
- If **Commission Model = Percent**, the value should be within a valid percentage range, e.g. **0–100**.
- If **Commission Model = Fixed Amount**, only valid non-negative monetary values should be accepted.

Actual Result:
The system currently allows negative values to be entered and saved in the **Commission Value** field.

Priority: Medium
Type: Validation / Functional Bug



TICKET# 93:

icket: Tax Slab Accepts Negative Values

Module: Organization → Payroll and Statutory
Section: Tax Slabs

Issue:
The **Monthly Taxable Up To** field is accepting negative values. As shown in the screenshot, a tax slab has been saved as **≤ -67,000**, which is an invalid taxable income threshold.

Steps to Reproduce:

1. Go to **Organization → Payroll and Statutory**.
2. Navigate to the **Tax Slabs** section.
3. Add or edit a tax slab.
4. Enter a negative value in **Monthly Taxable Up To**, e.g. `-67000`.
5. Save the tax slab.
6. The system accepts and displays the negative value.

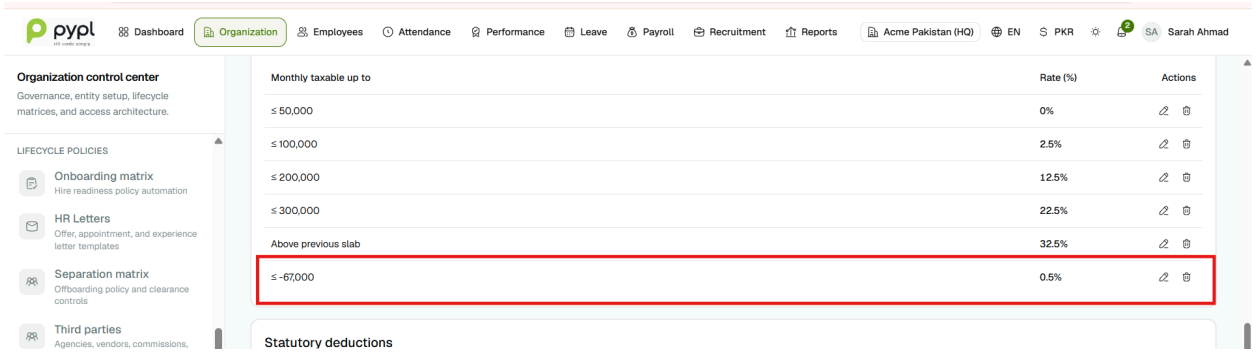
Expected Behavior:

- **Monthly Taxable Up To** must accept **only non-negative numeric values**.
- Negative values such as `-67,000` must not be accepted.

- Display a validation message such as:
  “Monthly taxable amount cannot be negative.”
- The user should not be able to save the tax slab until the invalid value is corrected.
- The field should support valid positive/zero values and appropriate decimal values if required.

Actual Result:
The system allows a negative taxable threshold to be saved and displayed.

Priority: Medium
Type: Validation / Functional Bug



TICKET# 94:

Ticket: Incorrect Required Field Validation in WFH Request

Module: Attendance → Hybrid & WFH
Screen: New WFH Request

Issue:
When submitting a WFH request with an employee already selected but the Reason field left empty, the system displays the generic error:

> “Employee and reason are required.”

This is incorrect because the **Employee field already contains a selected value**.

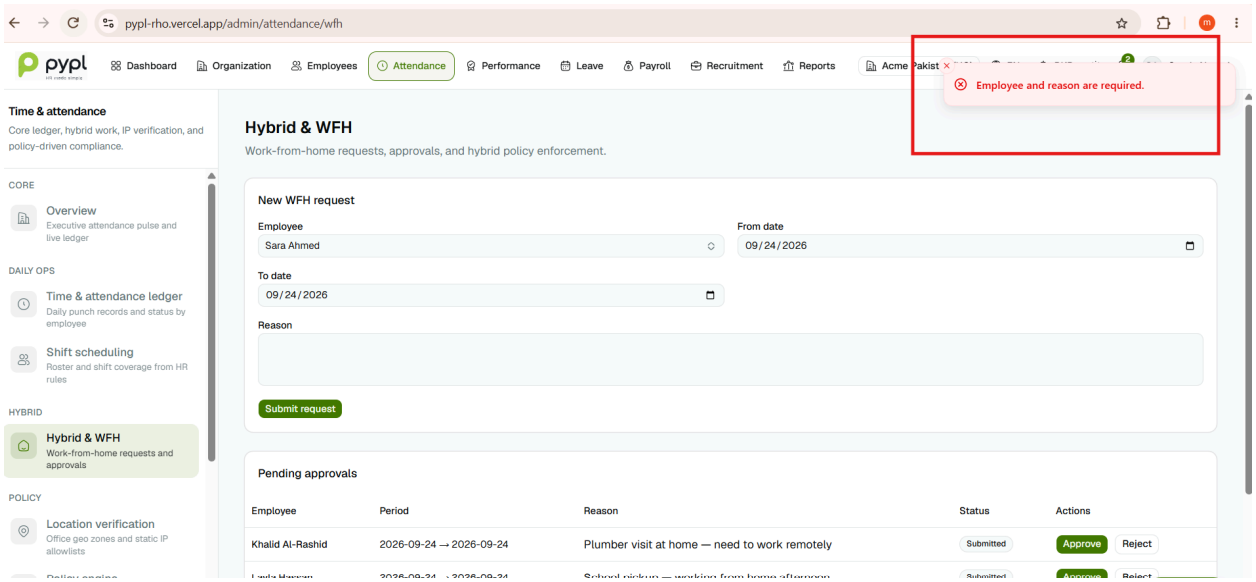
Expected Behavior:

- Employee should only trigger a validation error when no employee is selected.
- Reason should trigger a validation error when it is empty.

- Validation should identify **only the field(s) that are actually missing**.
- If both fields are mandatory, display a red * beside both labels:
    - **Employee ***
    - **Reason ***
- Preferably show an inline validation message under the empty field, e.g.: **“Reason is required.”**
- The generic toast should not incorrectly state that Employee is missing.

Actual Behavior:
Employee is selected, but the system still displays **“Employee and reason are required.”**

Priority: Medium
Type: Validation / UI Bug



TICKET# 95: (29-sep-2026)

Ticket: Define Authentication & Access Flow for Three Portals

Priority: High
Type: Authentication / Access Control / Functional Requirement

Description

The system consists of **three separate portals**, each with a different authentication and user-access model.

1. Admin Portal

- Admin users can **Sign Up** and **Sign In**.
- Admin has access to the organization's HR/admin management features.
- Admin can create and manage employee records.
- Admin/HR is responsible for providing employees with their login credentials.

2. Super Admin Portal

- Super Admin portal should have **Sign In only**.
- There should be **no Sign Up option**.
- Super Admin accounts should be created/managed through a controlled backend process.
- Only authorized Super Admin users should be able to access this portal.

3. Employee Portal

- Employee portal should have **Sign In only**.
- Employees should **not have a Sign Up option**.
- An employee account is created by **Admin/HR**.
- Once the employee account is created, Admin/HR provides the employee with their login credentials.
- Employees use those credentials to access their employee portal.

Expected Authentication Flow

Admin:

```
Sign Up → Account Created → Sign In → Admin Portal
```

Super Admin:

```
Sign In → Super Admin Portal
```

Employee:

```
Admin/HR creates employee account → Credentials provided to employee → Employee Sign In → Employee Portal
```

Access Rules

Portal	Sign Up	Sign In	Account Created By
Admin	✅ Yes	✅ Yes	Admin/User
Super Admin	❌ No	✅ Yes	System/Authorized Super Admin
Employee	❌ No	✅ Yes	Admin/HR

Important Validation

- Do **not** show a Sign Up option on the Super Admin or Employee login pages.
- Employees must not be able to create their own accounts.
- Admin-created employee credentials must be linked to the correct employee record.
- Each portal should enforce its respective role and permissions after authentication.
- Users should not be able to access another portal simply by changing the URL.
- Unauthorized users should be redirected to the appropriate login page/access-denied page.

SUPER ADMIN MODULE:

TICKET# 96:

Ticket: Fix Field Validation in Create Tenant

Module: Super Admin → Tenants
Screen: Create Tenant
Priority: High
Type: Validation / Form Controls

The following fields currently accept invalid/random characters such as `536366&*****8&^`. These fields should be restricted according to their intended data type.

Field	Expected validation
Organization name	Text field. Allow letters, numbers, spaces, and common business characters such as `&`, `.`, `-`, `'`. Reject meaningless/special-character-only values.
First name	Text only. Allow letters, spaces, hyphens and apostrophes. Reject numbers and special characters.
Last name	Text only. Allow letters, spaces, hyphens and apostrophes. Reject numbers and special characters.
Password	Follow password policy: minimum 8 characters, including at least one letter and one number. Special characters can be allowed.
Confirm password	Must follow the same password rules and exactly match the Password field.
Phone	Numeric phone number only, with validation according to the selected region/country. Reject letters and arbitrary special characters.

Important UI behavior

- Invalid characters should either be **blocked while typing** or produce an **inline validation message**.
- Do not allow the form to submit with invalid values.

- Required fields should have *.
- Validation should appear **under the relevant field**, rather than only as a generic toast.
- Password and Confirm Password should have an **eye/eye-off icon** to show/hide the password.

Example

If the user enters:

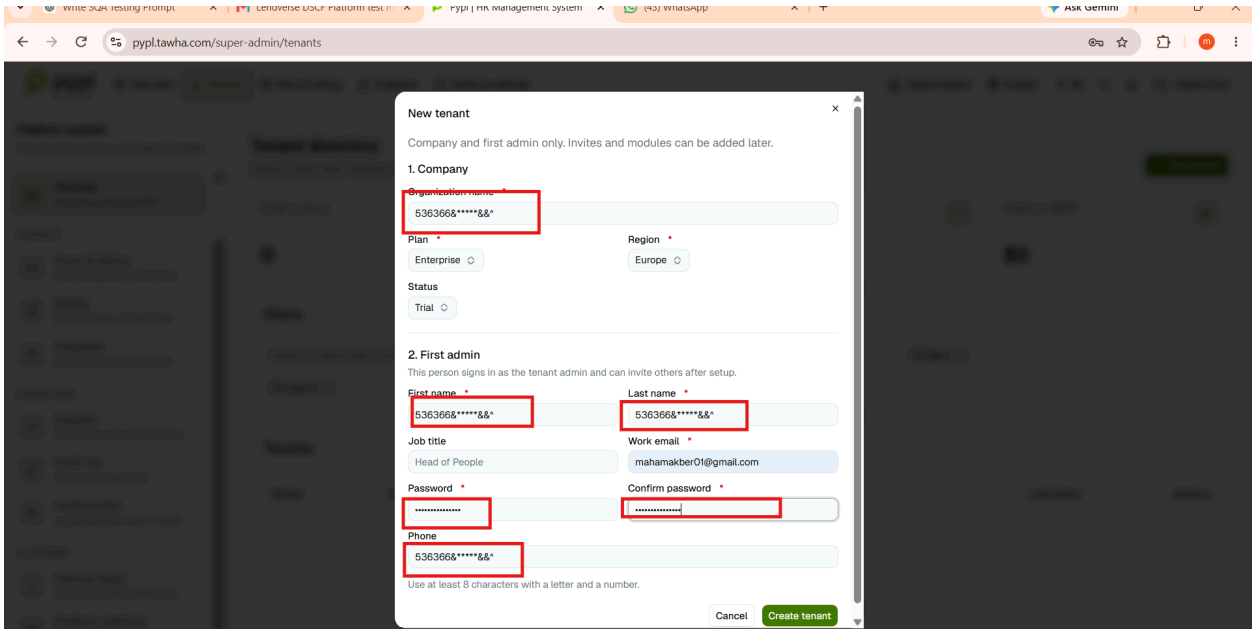
`536366&*****8&^`

in **First name**, show:

> **First name can only contain letters, spaces, hyphens, or apostrophes.**

For **Phone**:

> **Please enter a valid phone number.**



TICKET# 97:

Ticket: MRR Currency Not Updating Based on Selected Display Currency

Module: Super Admin → Tenants
Screen: Tenant Directory
Priority: High
Type: Bug / Currency Conversion

Issue:
The **Display Currency** dropdown allows the Super Admin to switch between currencies such as **PKR, AED, SAR, CAD, AUD, QAR, USD, and EUR**, but the **MRR values in the Tenant table remain in USD**.

For example, in the screenshot:

- Display currency is changed to **QAR**
- Tawha Technologies MRR still displays **-$890**
- Another tenant still displays **$12,400**

The MRR values should be converted and displayed according to the **currently selected display currency**.

Expected behavior

If the tenant's stored MRR is **USD 890**:

Display Currency = USD

$890

Display Currency = QAR

QAR equivalent of $890

Display Currency = PKR

PKR equivalent of $890

Display Currency = AED

AED equivalent of $890

Required implementation

Integrate an **exchange-rate API** to retrieve the latest exchange rates and convert MRR dynamically.

The system should:

1. Keep the tenant's **base MRR currency** stored separately.
2. Detect the currency selected from the top-right **Display Currency** dropdown.
3. Fetch the applicable exchange rate through the exchange-rate API.
4. Convert the MRR into the selected display currency.
5. Update **all MRR values** in the tenant directory accordingly.
6. Update MRR values consistently across relevant **billing/analytics screens**.
7. Display the correct currency symbol/code alongside the converted amount.

Important

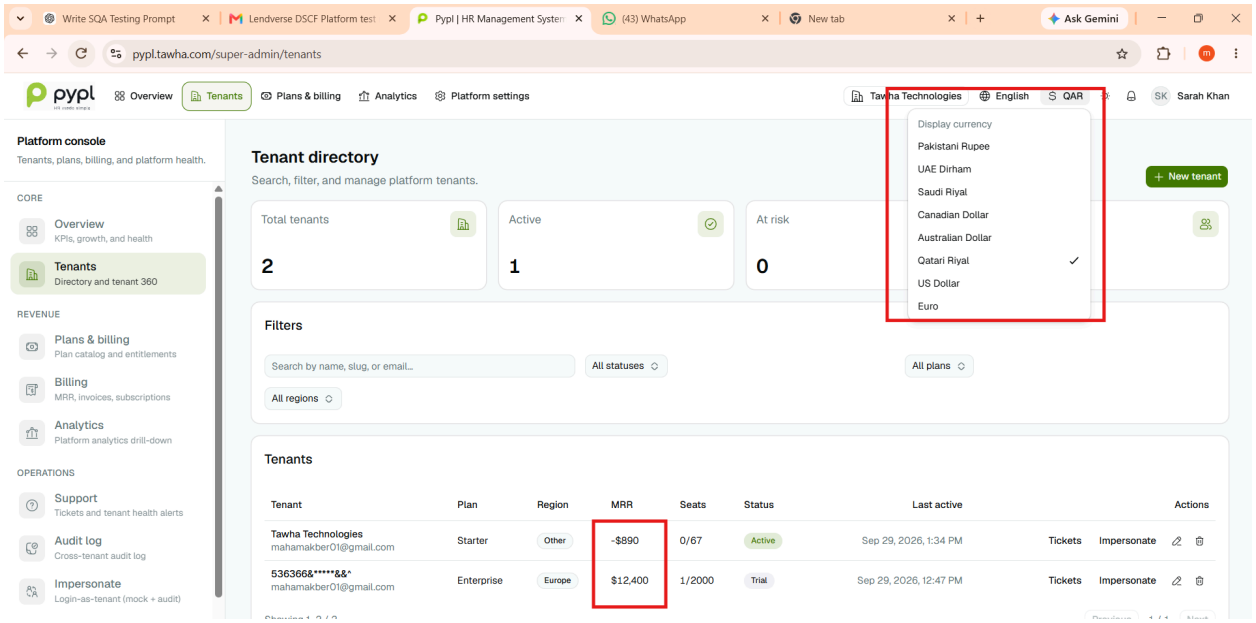
The conversion should **not overwrite the original MRR value**. It should only change how the amount is displayed based on the selected display currency.

Example:

`Base MRR = USD 12,400`

→ Display currency **USD** → `$12,400`
→ Display currency **QAR** → converted QAR amount
→ Display currency **PKR** → converted PKR amount
→ Display currency **AED** → converted AED amount

The exchange rate should also be handled consistently so that changing the display currency does not leave the MRR values showing in USD.



TICKET# 98:

Ticket: Align Tenant Filters in a Single Row

Module: Super Admin → Tenants
Screen: Tenant Directory
Priority: Medium
Type: UI / Layout

Issue:
The filters in the Filters section are currently split across two rows. The All regions dropdown appears on a separate row, while All statuses and All plans are on the first row.

Expected behavior

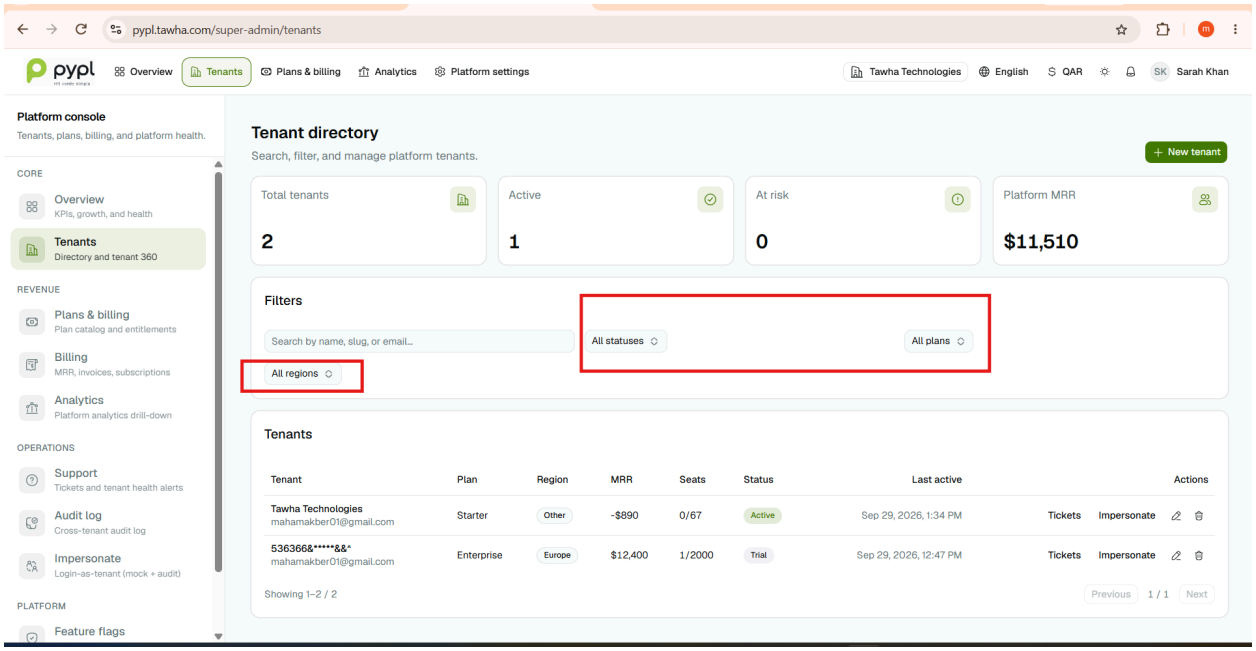
All filter controls should be aligned horizontally in one row:

Search | All statuses | All plans | All regions

The spacing between the controls should be consistent, and they should remain properly aligned within the Filters container.

Acceptance criteria

- Search field and all three dropdowns appear on one row on desktop.
- Equal/consistent vertical alignment between all controls.
- No unnecessary second row for All regions.
- Maintain appropriate spacing between fields.
- On smaller screens where one row cannot reasonably fit, responsive wrapping is acceptable.



TICKET# 99:

Ticket: MRR Should Not Accept Negative Values

Module: Super Admin → Tenants
Screen: Tenant Directory
Priority: High
Type: Validation / Calculation Bug

Issue:
The **MRR** value for a tenant is currently accepting negative amounts. In the screenshot, Tawha Technologies has:

MRR: -$890

Because the MRR is negative, the system is also **subtracting $890 from the Platform MRR**, which is incorrect.

Expected behavior

MRR should **never accept a negative value**.

For example:

- Tawha Technologies MRR: **$890**
- Other Tenant MRR: **$12,400**
- **Platform MRR = $13,290**

It should **not** calculate:

```
$12,400 - $890 = $11,510
```

Required validation

The MRR input should:

- Accept `0` or positive values.
- Reject negative values such as `-890`, `-100`, etc.
- Ideally prevent the user from entering `-` in the field.
- Display an inline validation message if a negative value is somehow submitted:

MRR cannot be negative. Please enter a value greater than or equal to 0.

Platform MRR calculation

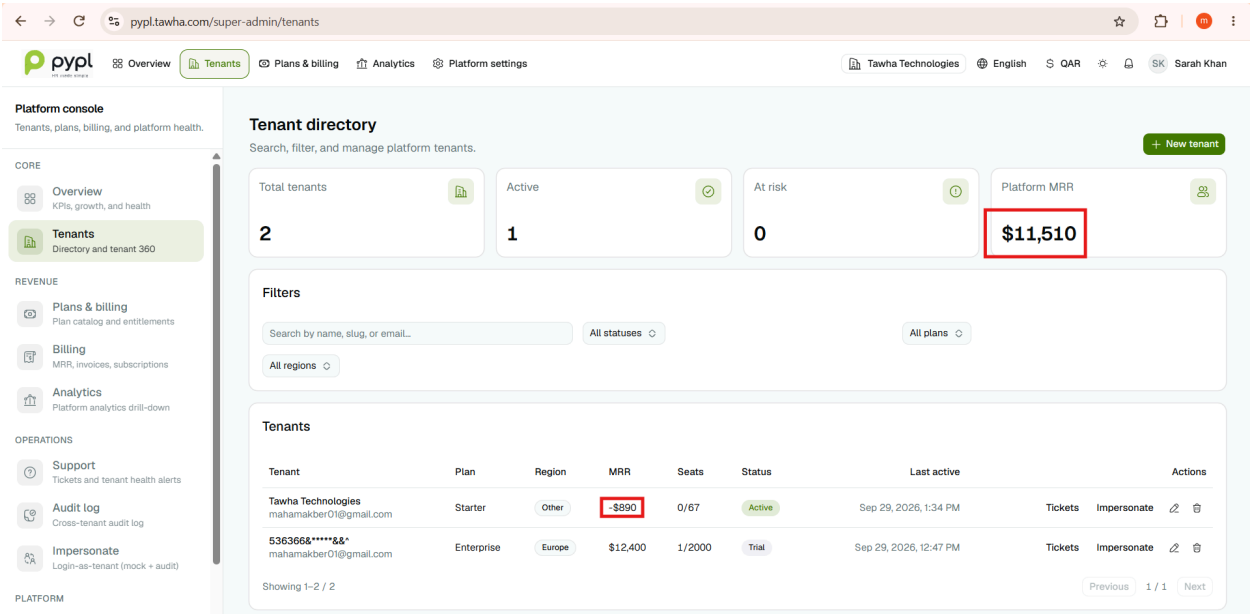
Platform MRR = Sum of all valid tenant MRR values

It should only add valid, non-negative MRR amounts.

Example:

Tenant	MRR
Tawha Technologies	$890

Acme Pakistan	$12,400
Platform MRR	**$13,290**



TICKET# 100:

Ticket: MRR Baseline Accepts Negative Values

Module: Super Admin → Plans & Billing → Plans
Priority: High
Type: Validation Bug

Issue:
The **MRR Baseline** field in the **New Plan** form accepts negative values. As shown in the screenshot, a plan was created with an MRR Baseline of **250**, but the Plans listing displays it as **-$250**.

The system should not allow negative MRR values because MRR represents recurring revenue and a negative value can result in incorrect billing/revenue calculations.

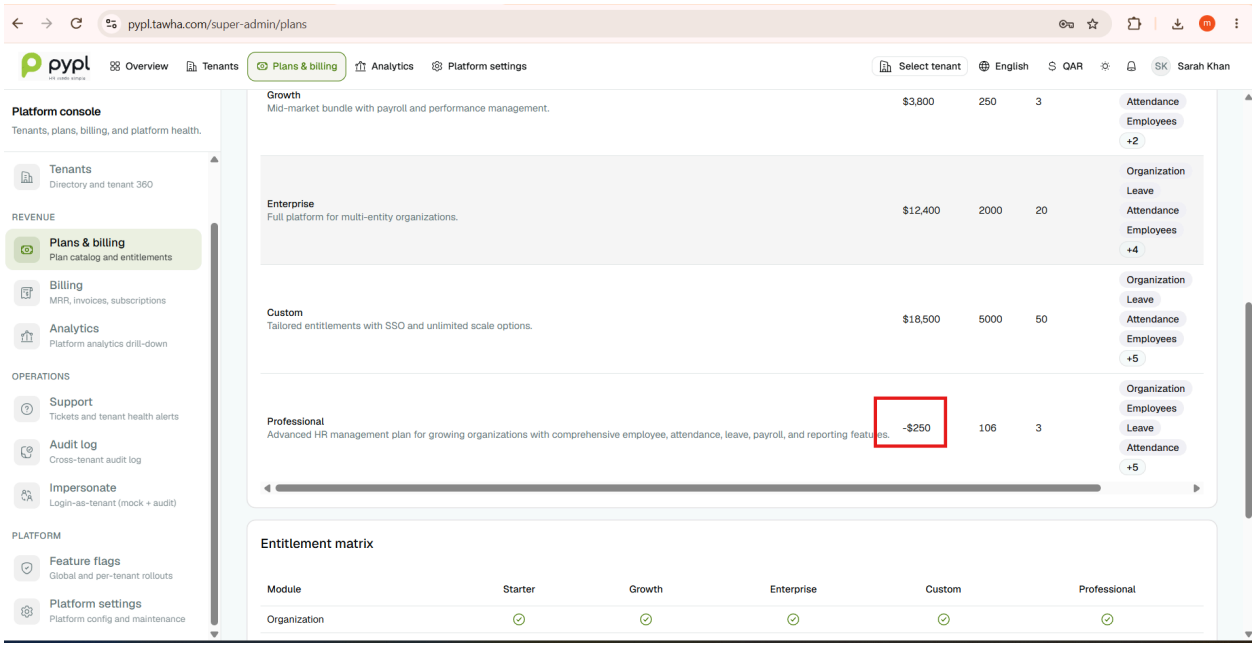
Expected Behavior:

- MRR Baseline should accept **0 or positive values only**.
- Negative values such as `-250`, `-1000`, etc. should be rejected.
- The field should have a minimum value of `0`.
- Validation should be applied on both frontend and backend.
- An appropriate validation message should be displayed, e.g.:
  “MRR Baseline cannot be negative. Please enter a value greater than or equal to 0.”
- A plan containing an invalid negative MRR Baseline should not be created or saved.

Example:

Input	Expected
`0`	✅ Accepted
`250`	✅ Accepted
`1000`	✅ Accepted
`-250`	❌ Rejected

-100 ❌
0 Rejected



TICKET# 101:

Ticket: Make Admin Support Email and Resolution Notifications Dynamic

Module: Admin Portal → Help & Support + Super Admin → Support
Priority: High
Type: Feature / Support Workflow

Current Issue

In the Admin Portal, the **Help & Support** page has an **"Email support"** button, but the support flow is not dynamic.

The Admin should be able to click **Email support** and raise a complaint/support request directly to the Super Admin support team. The system should automatically populate the relevant information instead of using a generic/static email.

Similarly, when the Super Admin resolves the complaint/ticket, the Admin should automatically receive an email notification that the ticket has been resolved.

Expected Workflow

Admin Portal

`Help & Support → Email Support → Compose Complaint → Send`

When the Admin clicks **Email support**, the system should dynamically generate the email with:

- Admin's name
- Admin's registered email
- Tenant/Organization name
- Tenant ID, if applicable
- Subject
- Complaint/issue description
- Relevant support/ticket reference, if available

Example generated email:

To: `support@pypl.tawha.com`
Subject: `Support Request – Tawha Technologies – Payroll Issue`

Body:

> Hello Support Team,
>
> I am reporting an issue with the payroll module. The payroll calculation is showing incorrect deductions.
>
> **Organization:** Tawha Technologies
> **Reported by:** Sarah Khan
> **Email:** sarah@tawha.com
> **Module:** Payroll
>
> Please investigate this issue.
>
> Regards,
> Sarah Khan

The recipient should **not be hardcoded in the frontend**. It should come from the platform/support configuration.

Super Admin Side

The complaint should appear in:

Super Admin → Support → Support Tickets

The ticket should contain:

Field	Example
Ticket ID	SUP-1024
Subject	Payroll calculation issue
Tenant	Tawha Technologies
Requester	Sarah Khan
Requester Email	sarah@tawha.com
Priority	Medium
Status	Open
Assignee	Support Admin

Created	Sep 29, 2026

Super Admin can then change the status:

Open → In Progress → Resolved → Closed

Resolution Email

When the Super Admin changes the ticket status to **Resolved**, the system should automatically send an email to the **original Admin/requester's registered email address**.

The email should be dynamically generated based on the ticket.

Subject:

> `Support Ticket SUP-1024 Resolved – Payroll Calculation Issue`

Body:

> Hello Sarah,
>
> Your support request has been resolved.
>
> **Ticket:** SUP-1024
> **Issue:** Payroll calculation issue
> **Organization:** Tawha Technologies
> **Status:** Resolved
>
> **Resolution:** The payroll calculation issue has been investigated and corrected.
>
> If you continue to experience the issue, please reply to this email or create a new support request.
>
> Regards,
> Pypl Support Team

Important Requirements

- The **Admin's email must be retrieved dynamically** from the logged-in Admin account.
- The **Tenant/Organization must be automatically identified** from the Admin's tenant.
- Support email recipient should be configurable, not hardcoded.
- Every complaint should have a **unique Ticket ID**.
- Resolution email should be sent to the **original requester**.
- Email should include the **ticket ID and current status**.
- Super Admin should be able to add a **resolution note**, which is included in the resolution email.
- Email should only be sent when the ticket actually changes to **Resolved**.
- The email activity should be recorded in the ticket/audit history.
- If the Admin replies to the resolution email, the system should ideally associate the reply with the same ticket rather than creating an unrelated request.

Final Flow

Admin

```
Help & Support → Email Support → Complaint Submitted
```

↓

Super Admin

```
Support → Ticket Received → Investigate → Resolve
```

↓

System

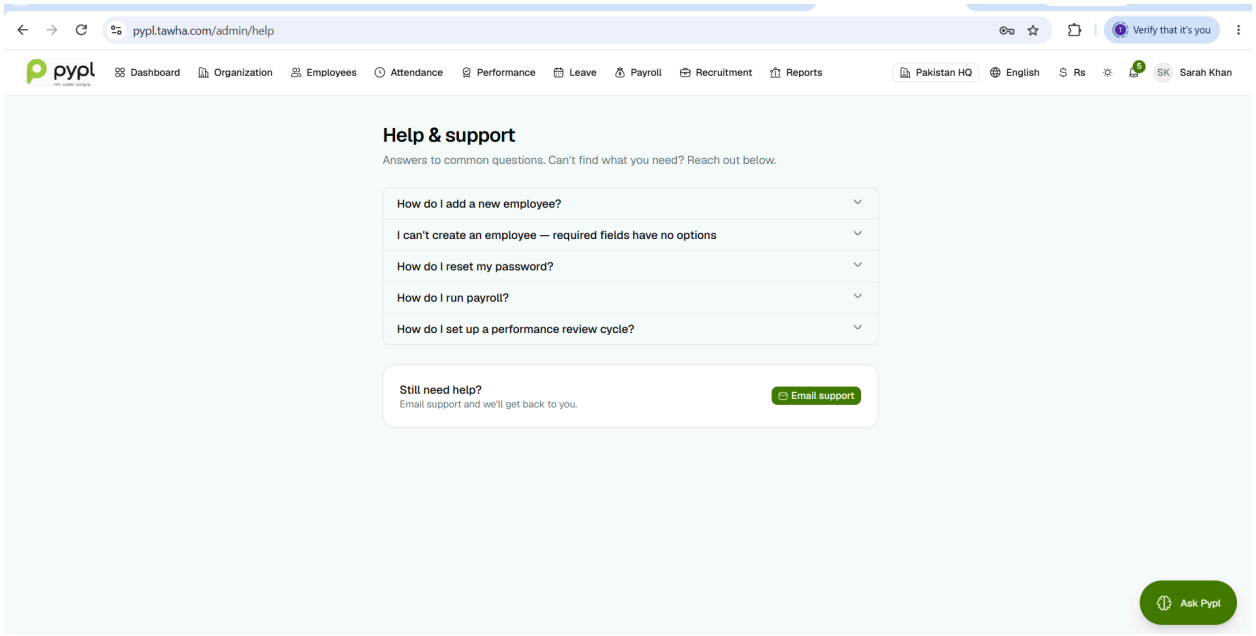
```
Automatically sends resolution email to original Admin
```

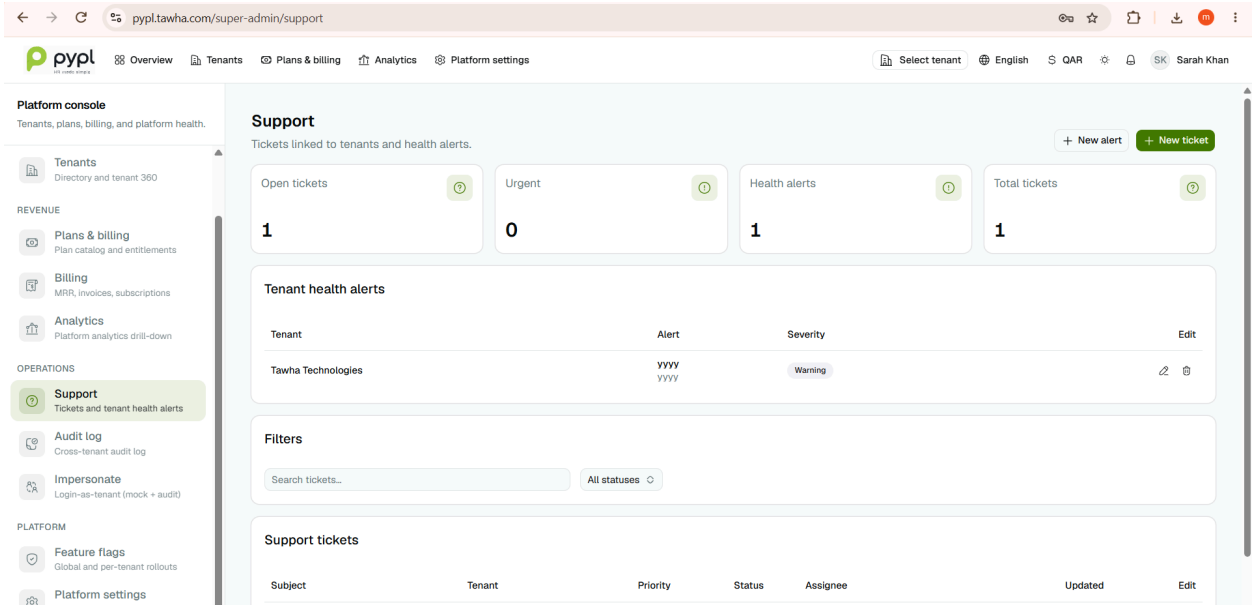
↓

Admin

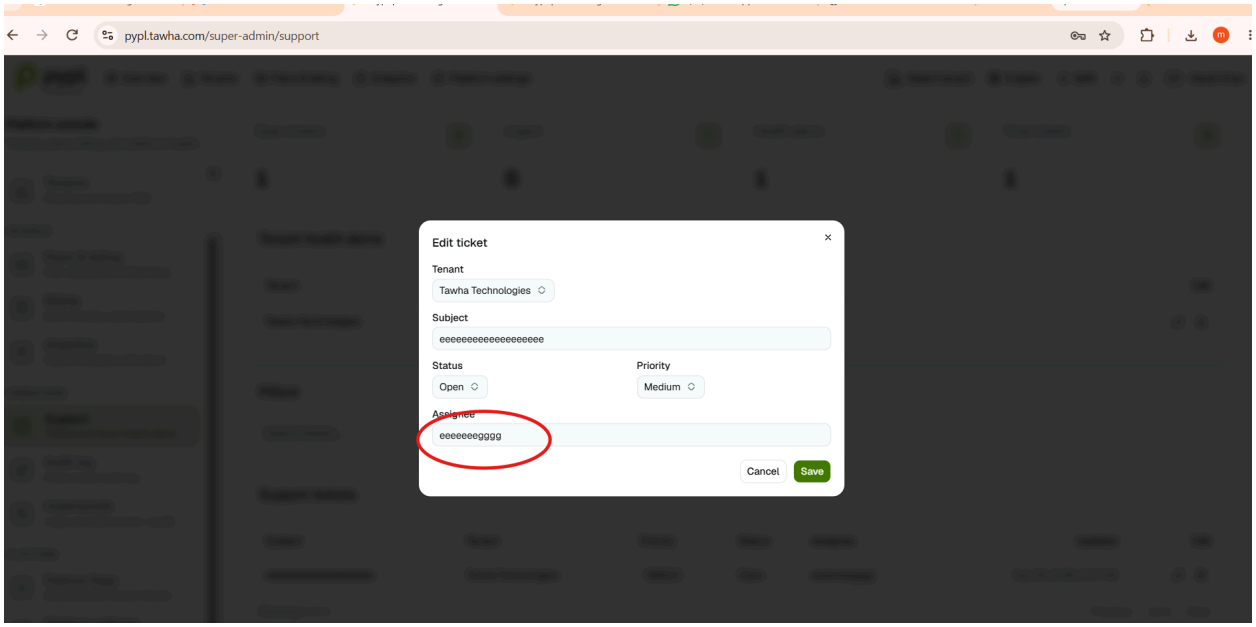
```
Receives: "Your support ticket SUP-1024 has been resolved."
```

This makes the current **Email Support** button an actual dynamic support workflow instead of a static contact link.





Assignee dropdown it should be



TICKET# 102:

Ticket: Invoice PDF Table Columns Are Not Vertically Aligned

Module: Super Admin → Billing → Invoice PDF
Priority: Medium
Type: UI / PDF Formatting Bug

Issue:
In the generated invoice PDF, the **column headings and their corresponding values are not vertically aligned**.

For example:

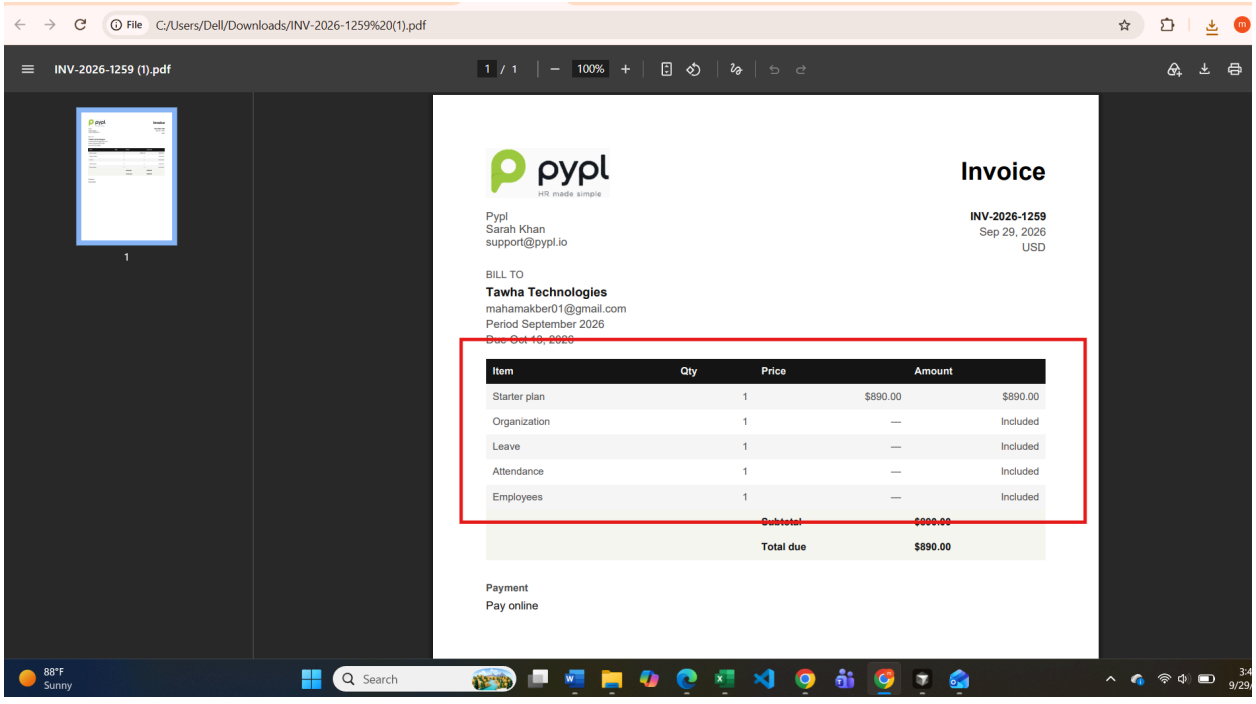
- **Item** heading should align with the Item values.
- **Qty** heading should align with the quantity values.
- **Price** heading should align with the price values.
- **Amount** heading should align with the amount values.

Currently, the header positions and the data columns are offset from each other, making the table look visually inconsistent and difficult to scan.

Expected Behavior

The PDF table should use consistent column widths and positioning so that each header is directly aligned with its corresponding data column.

Header	Data
Item	Starter plan, Organization, Leave, etc.
Qty	1
Price	$890.00
Amount	$890.00 / Included



TICKET# 103:

Ticket: Add PKR to Invoice Currency Dropdown

Module: Super Admin → Billing → Invoice
Priority: Medium
Type: Enhancement / Configuration

Issue:
The **Currency** dropdown in the invoice creation screen does not include **Pakistani Rupee (PKR)**.

Since the platform supports organizations operating in Pakistan, PKR should be available as an invoice currency.

Expected Behavior:

Add the following option to the **Currency** dropdown:

- **Pakistani Rupee (PKR) — Rs / Rs**

When PKR is selected:

- Invoice amounts should be displayed in PKR.
- The correct currency code/symbol should appear on the invoice.
- Generated PDF/printed invoice should also reflect **PKR** consistently.
- Currency selection should be retained when saving the invoice.

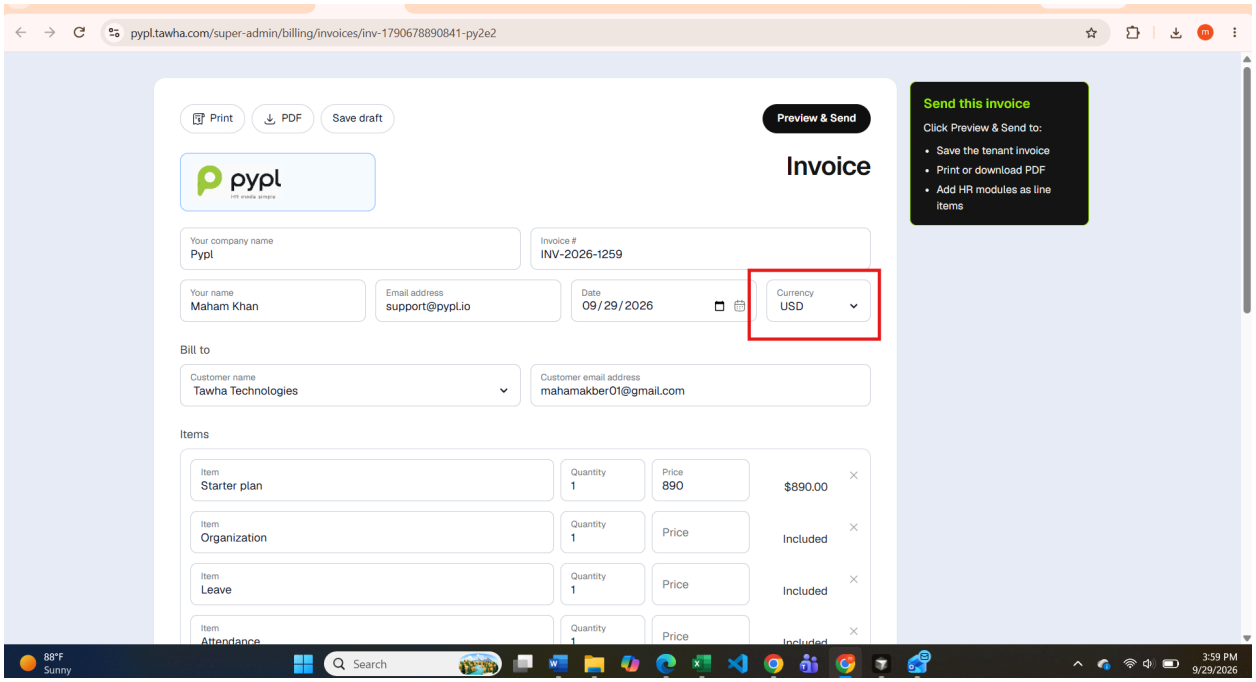
Example:

```
Currency → Pakistani Rupee (PKR)
```

Invoice:

> **Total Due: PKR 890.00**

The currency list should ideally include the other supported currencies alongside PKR rather than requiring the user to manually enter a currency.



TICKET# 104:

Ticket: Invoice Line Item Price Accepts Negative Values

Module: Super Admin → Billing → Invoice
Priority: High
Type: Validation / Calculation Bug

Issue:
The **Price** field for invoice line items accepts negative values. As shown in the screenshot, values such as **-890** and **-99** are accepted, resulting in a negative subtotal of **-$911.00**.

The system also allows the invoice to be generated successfully, and the resulting PDF displays the negative amounts.

Expected Behavior

- **Price must not accept negative values.**
- Only `0` or positive values should be accepted.
- Negative values such as `-890`, `-99`, or `-1` should be rejected.
- The invoice should not be generated/saved if any line item contains an invalid negative price.

- Validation must be applied on both **frontend and backend**.
- The generated PDF should never contain negative line-item prices or totals resulting from invalid input.

Validation Message

Display an inline error such as:

> **Price cannot be negative. Please enter a value greater than or equal to 0.**

Example

Price Input	Expected
`0`	✅ Accepted
`78`	✅ Accepted
`890`	✅ Accepted
`-1`	❌ Rejected
`-99`	❌ Rejected

`-890` ❌
Rejected

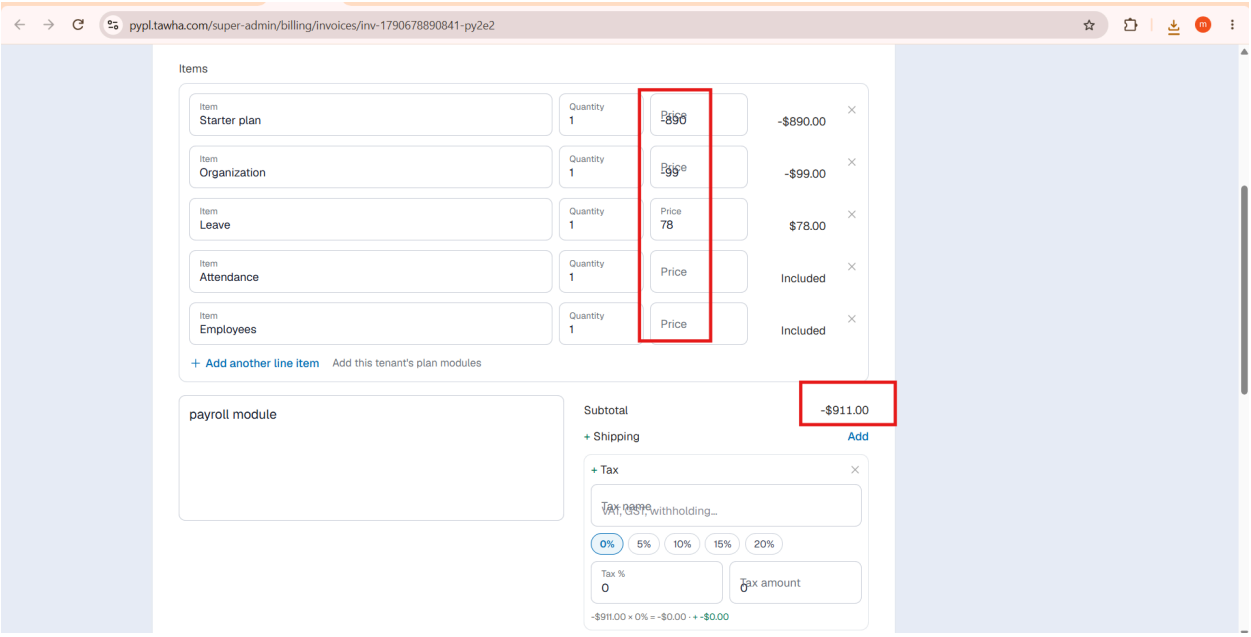
PDF Validation

The validation should also protect the generated invoice. Currently:

Input: `-890 + -99 + 78`
Generated subtotal: `-$911.00` ❌

Expected:

Negative values rejected → invoice cannot be generated until invalid prices are corrected.



TICKET# 105:

Ticket: Floating Labels Overlap Field Values

Module: Super Admin → Billing → Invoice
Priority: Medium
Type: UI / Layout Bug

Issue:
The **Price** and **Tax Name** fields have overlapping floating labels and field content.

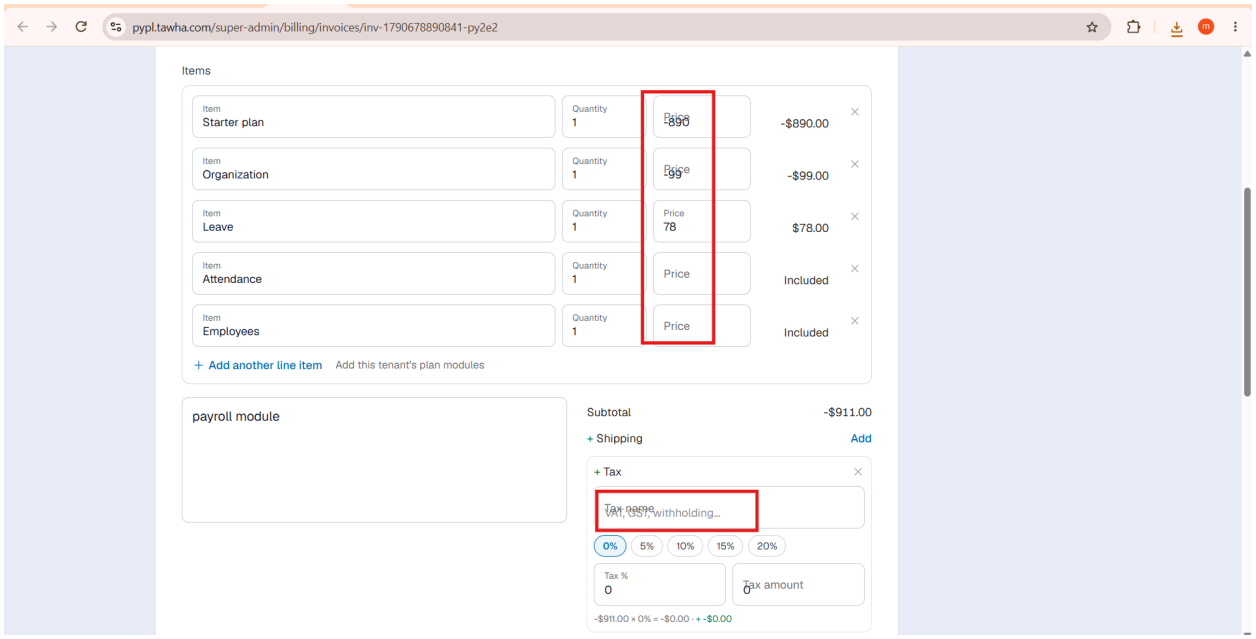
- In **Price**, the `Price` label overlaps with the entered value such as `-890`.
- In **Tax Name**, the `Tax name` label overlaps with the placeholder text.

Expected Behavior:

- Labels should have proper spacing from input values/placeholders.
- When the field is focused or contains a value, the label should move to a clear floating position.
- Placeholder/value text should never overlap the label.
- Apply the same floating-label behavior consistently across the invoice form.

Affected Fields:

1. Price
2. Tax Name



TICKET# 106:

Ticket: Invoice Due Date Does Not Follow Configured Grace Period

Module: Super Admin → Billing → Invoice
Priority: High
Type: Business Logic / Validation Bug

Issue:
The invoice **Due Date** is not being calculated according to the configured **Grace Period**.

The system should have a configurable grace period (e.g. **1 week / 7 days**). Once the **Invoice Date** is selected, the Due Date should be automatically calculated based on that configured grace period.

In the screenshot, the invoice date and due date are inconsistent. The generated invoice shows an invalid due-date calculation.

Expected Behavior

If the configured grace period is **7 days**, then:

Invoice Date: 29 Sep 2026
Grace Period: 7 days
Due Date: 06 Oct 2026

The calculation should always be:

Due Date = Invoice Date + Configured Grace Period

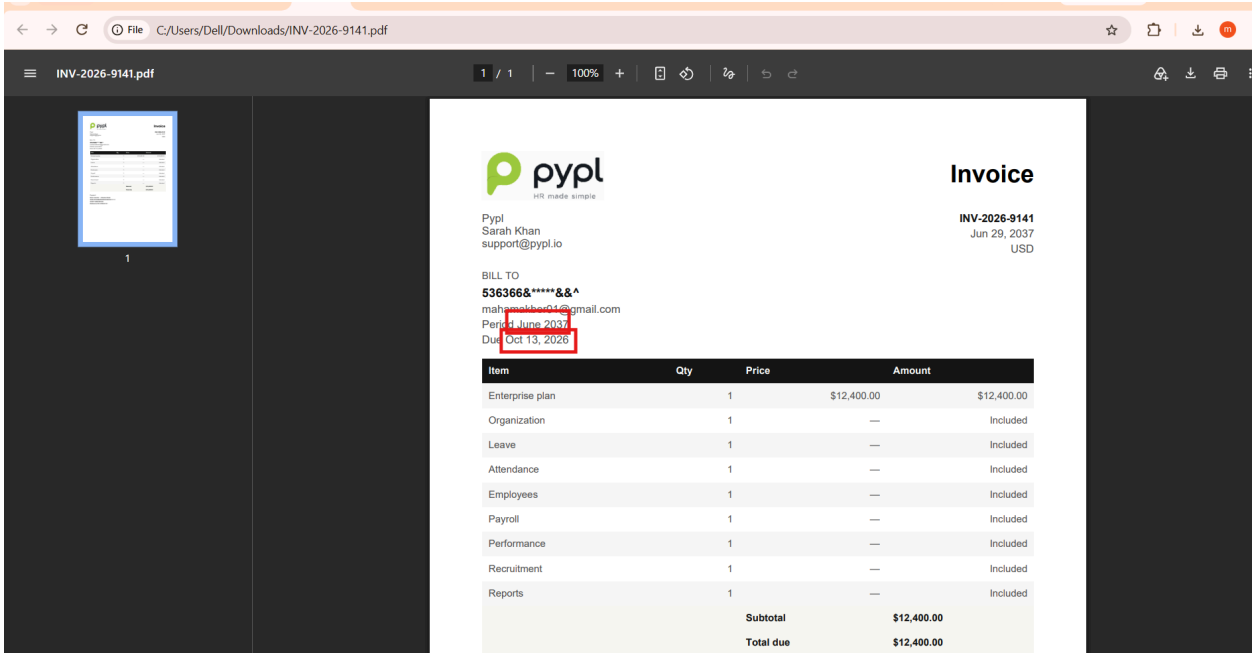
Requirements

- Add/maintain a **Grace Period** setting for invoices.
- Grace Period should be dynamic/configurable (e.g. 7 days).
- Due Date should automatically update whenever Invoice Date changes.
- The user should not be able to generate an invoice with a Due Date earlier than or inconsistent with the Invoice Date + Grace Period.
- The same calculated Due Date must appear consistently in:
    - Invoice screen
    - Saved invoice
    - Generated PDF
    - Printed invoice
    - Email invoice, if applicable.
- Backend should also validate the calculation so it cannot be bypassed through the UI.

Example:

Invoice Date	Grace Period	Expected Due Date
29 Sep 2026	7 days	06 Oct 2026
01 Oct 2026	7 days	08 Oct 2026
15 Oct 2026	7 days	22 Oct 2026

The **grace period should be dynamic**, based on the configured invoice/billing setting rather than a hardcoded date or value.



TICKET# 107:

Ticket: Print Button Redirects to Blank Page

Module: Super Admin → Billing → Invoice
Priority: High
Type: Functional Bug

Issue:
When the user clicks the **Print** button while creating/viewing an invoice, the system redirects to a **blank page** instead of opening the browser's print preview/dialog with the invoice content.

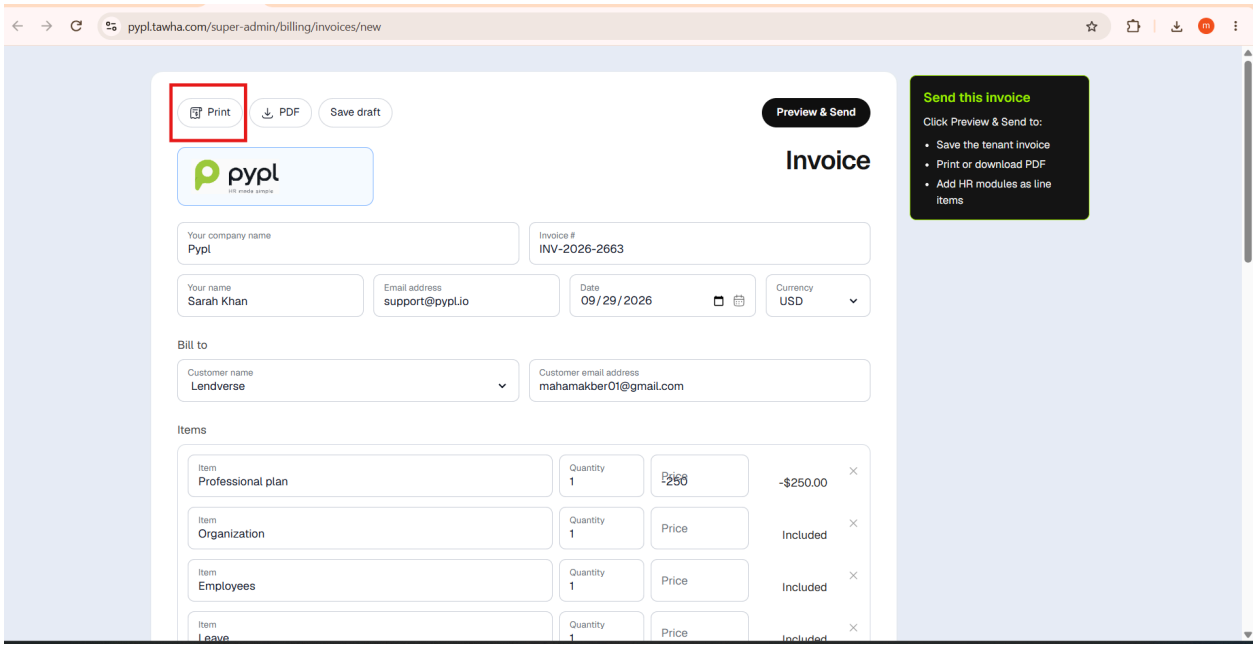
Expected Behavior

When clicking **Print**:

1. The system should generate the invoice print view.
2. The invoice content should be displayed correctly.
3. The browser's **Print Preview** should open.
4. User should be able to print or save the invoice as PDF.
5. No blank page should be displayed.

Acceptance Criteria

- Print button opens the browser print dialog/preview.
- Invoice data is completely rendered in the print view.
- Company/customer details, invoice number, date, currency, line items, subtotal, tax, and total are visible.
- Print view should use a proper print-friendly layout.
- Clicking Print should not redirect the user to an empty/blank page.
- Print functionality should work consistently for both new and saved invoices.



TICKET# 108:

Ticket: Invoice Fields Should Not Be Editable

Module: Super Admin → Billing → Invoice
Priority: High
Type: Access Control / Functional Bug

Issue:
The invoice currently allows users to edit invoice information directly after the invoice has been generated/created. For example, fields such as **Invoice #** are editable, as shown in the screenshot.

Invoices should be treated as finalized financial documents and should not allow unauthorized modification of core invoice information.

Expected Behavior

Once an invoice is created/finalized:

- **Invoice #** should be read-only.
- Invoice date should be read-only.
- Customer/Tenant information should be read-only.
- Currency should be read-only.

- Line items, quantities, and prices should be read-only.
- Tax, subtotal, and total amounts should be read-only.
- The finalized invoice should not be directly editable.

If a correction is required, the system should provide a controlled action such as:

Edit/Draft → Update → Recalculate → Finalize

or, for an already issued invoice:

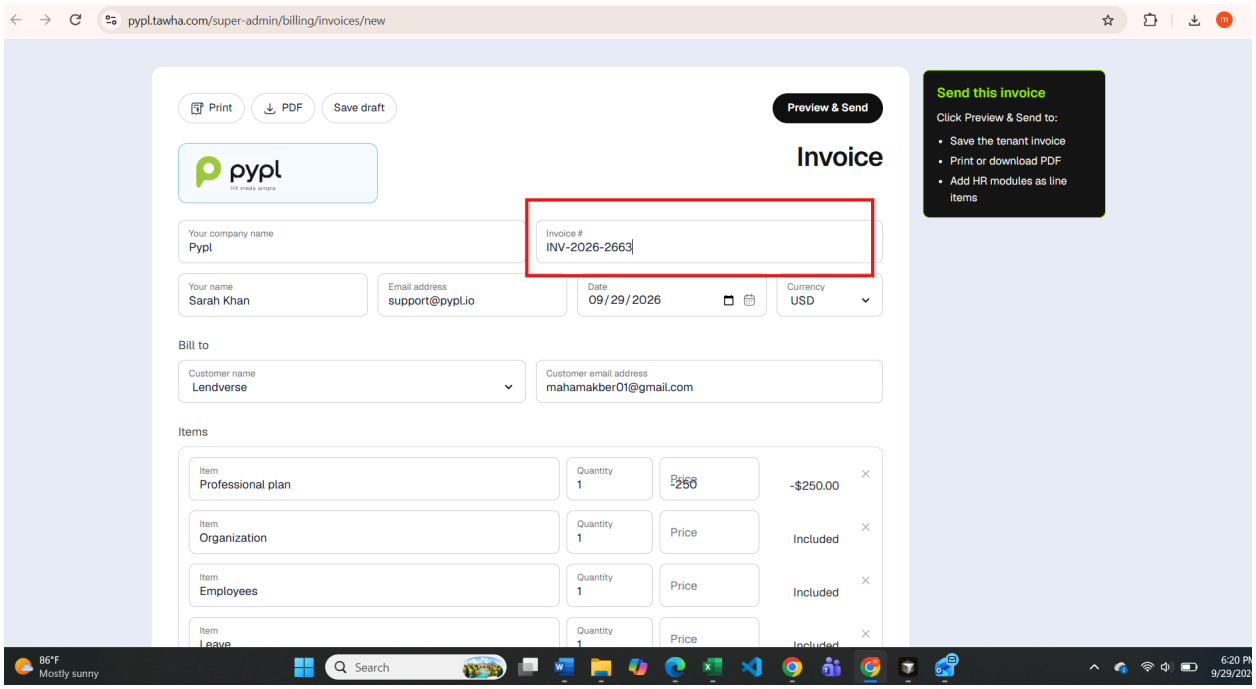
Void/Cancel → Create Corrected Invoice

Important

The restriction should be enforced on the **backend as well as the UI**. Hiding/disabling the fields alone should not allow users to modify invoice data through an API request.

Acceptance Criteria:

- Finalized invoices cannot be directly edited.
- Core invoice fields are displayed as read-only.
- Financial calculations cannot be manually manipulated after finalization.
- Any correction follows a controlled revision/void-and-reissue workflow.
- Generated PDF and stored invoice remain consistent with the finalized record.



TICKET# 109:

Ticket: Table Column Headings Should Be Bold

Module: Super Admin → Billing
Priority: Low
Type: UI / Styling Issue

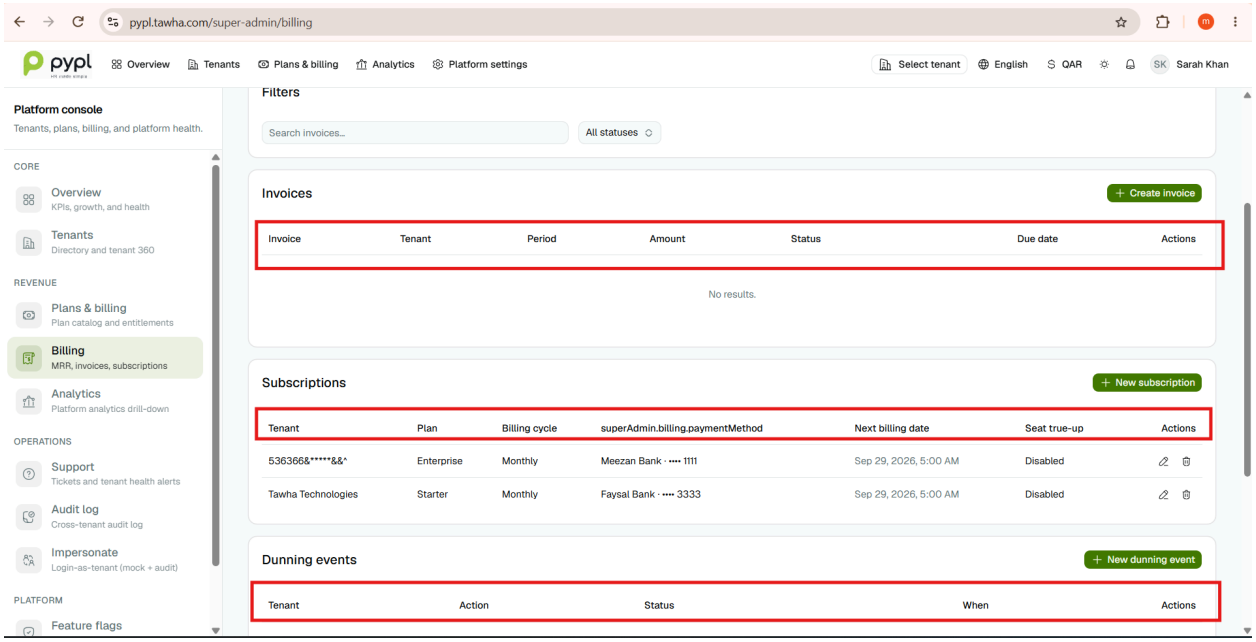
Issue:
The column headings in the **Invoices**, **Subscriptions**, and **Dunning Events** tables are currently displayed in regular font weight. This makes them less visually distinct from the table data.

Affected headings:

- **Invoices:** Invoice, Tenant, Period, Amount, Status, Due date, Actions
- **Subscriptions:** Tenant, Plan, Billing cycle, Payment Method, Next billing date, Seat true-up, Actions
- **Dunning Events:** Tenant, Action, Status, When, Actions

Expected Behavior:

- All table column headings should use **bold/semi-bold font weight**.
- Headers should remain visually distinct from the table row data.
- Apply the same styling consistently across all billing tables.



TICKET# 110:

Ticket: “Preview & Send” Does Not Send Invoice Email

Module: Super Admin → Billing → Invoice
Priority: High
Type: Functional / Email Integration Bug

Issue:
When the user clicks **“Preview & Send”**, the invoice is not actually sent to the customer's email address.

Instead, the system only displays an **“Updated”** popup/message, giving the impression that the invoice was updated rather than being sent.

Expected Behavior:

When **Preview & Send** is clicked:

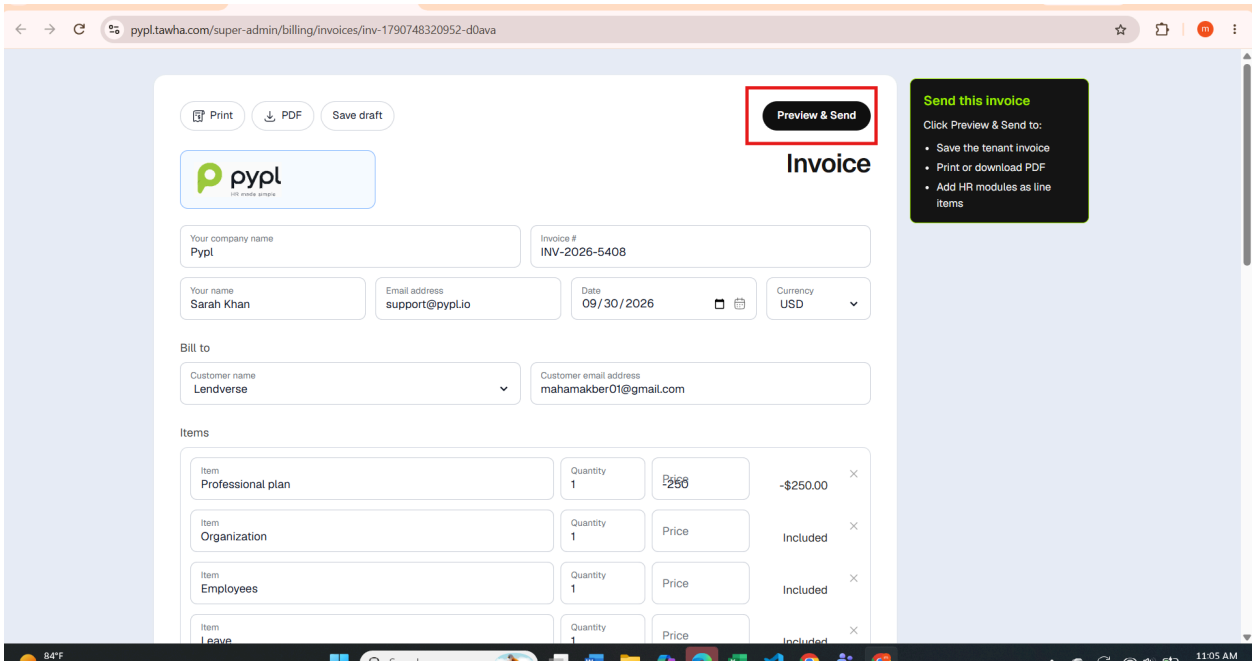
1. The invoice should be saved/updated.
2. The system should retrieve the customer's email address from the invoice/customer record.
3. The invoice should be sent to that email address.
4. A clear success message should be displayed, e.g.:

Invoice INV-2026-5408 has been sent successfully to mah*@gmail.com.**

5. If email delivery fails, the user should receive an appropriate error message instead of an “Updated” message.

Acceptance Criteria:

- Clicking **Preview & Send** triggers the email-sending process.
- Customer email is dynamically populated from the selected customer.
- Generated invoice/PDF is attached to the email.
- Email contains the correct invoice number and billing information.
- Success/failure status is clearly communicated to the user.
- **“Updated”** should not be shown as the success message when the intended action is sending the invoice.
- The email-sending action and result should be recorded against the invoice.



TICKET# 111:

Ticket: Performance Page Shows Incorrect Employee Profile Linking Message in Arabic

Module: Employee Portal → Performance
Priority: Medium
Type: Localization / UI Issue

Issue:
When the Employee Portal is switched to **Arabic**, the Performance page displays the employee profile linking message in English instead of Arabic.

The following texts remain untranslated:

- **“No employee profile linked”**
- **“Your login email is not linked to an employee record in this tenant. Performance data loads from live APIs only — ask HR to create or link your employee profile.”**

Expected Behavior

When the portal language is set to **Arabic**, all static UI messages on the Performance page should be displayed in Arabic.

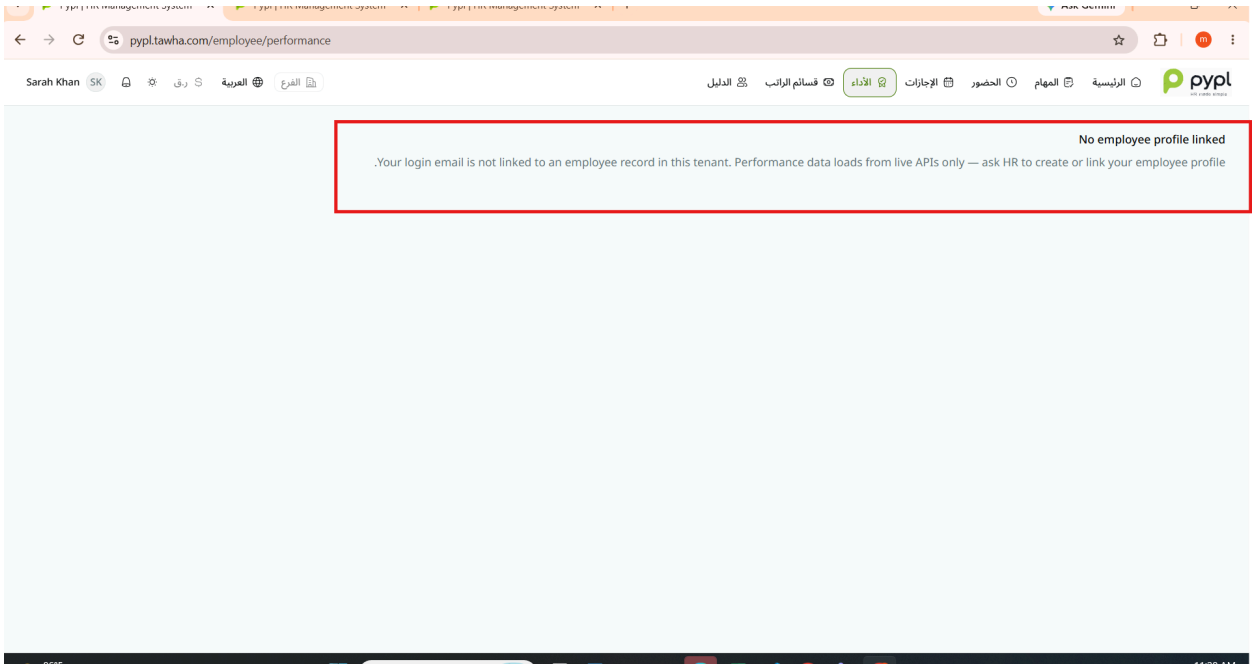
Expected translation:

لا يوجد ملف موظف مرتبط

بريدك الإلكتروني لتسجيل الدخول غير مرتبط بسجل موظف في هذه المؤسسة. يتم تحميل بيانات الأداء من واجهات برمجة التطبيقات المباشرة فقط — يُرجى التواصل مع قسم الموارد البشرية لإنشاء ملف الموظف الخاص بك أو ربطه.

Acceptance Criteria

- No English text should remain on the Performance page when Arabic is selected.
- Both the heading and description should be translated.
- Arabic text should use proper **RTL direction and alignment**.
- The same localization behavior should apply to similar system-generated messages across the Employee Portal.
- Switching back to English should correctly display the English text.



TICKET# 112:

Ticket: Tenant Admin Credentials Not Working After Tenant Creation

Module: Super Admin → Tenants → Create Tenant / Admin Portal → Sign In
Priority: Critical
Type: Authentication / Functional Bug

Issue:
When a new tenant is created from the **Super Admin** → **Tenants** module, the **First Admin email and password** are successfully entered/created during tenant setup.

However, when the created Admin attempts to log in to the Admin Portal using the **same email and password**, the login fails with **"Invalid credentials."**

The screenshot also shows the login API returning **401 Unauthorized**.

Expected Behavior

After successfully creating a tenant:

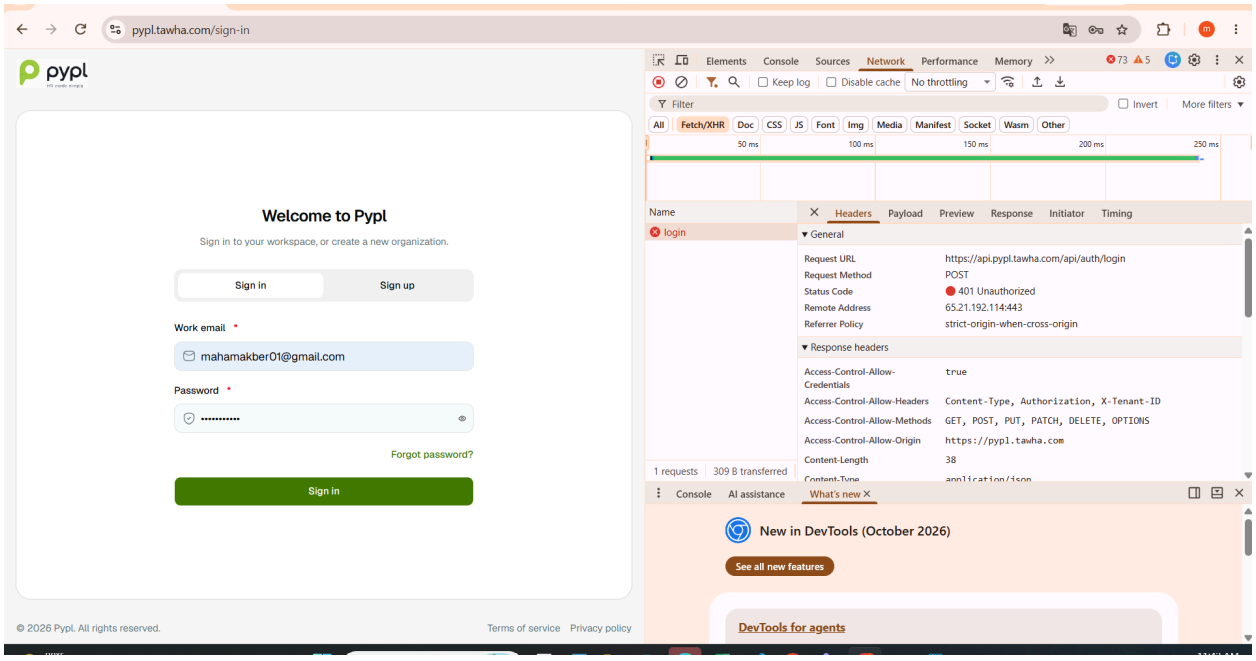
1. The First Admin account should be created successfully.
2. The provided **Work Email** should be registered against that Admin account.
3. The provided **Password** should be associated with the account securely.

4. The Admin should be able to log in using the exact credentials configured during tenant creation.
5. Successful login should redirect the Admin to their tenant dashboard.

Acceptance Criteria

- Credentials created during **New Tenant** setup must be valid for Admin Portal login.
- Email should be correctly associated with the newly created tenant/Admin.
- Password should be correctly persisted/hashed and verified during authentication.
- Tenant context should be correctly associated with the Admin account.
- Login API should return successful authentication for valid credentials instead of **401 Unauthorized**.
- Invalid credentials should still correctly return an authentication error.
- Verify the complete flow:

Super Admin creates Tenant → First Admin account created → Admin logs in → Tenant Dashboard opens



TICKET# 113: (1-oct-2026)

Ticket: Add Eye Icon to Portal Password Fields

Module: Admin Portal → Employees → Create Employee
Priority: Medium
Type: UI / Usability Enhancement

Issue:
The **Portal Password** and **Confirm Portal Password** fields do not have an **eye/show-hide icon**.

Since both fields contain password values that are masked by default, users cannot easily verify whether they have entered the correct password.

Expected Behavior:

Add a **show/hide (eye) icon** to both:

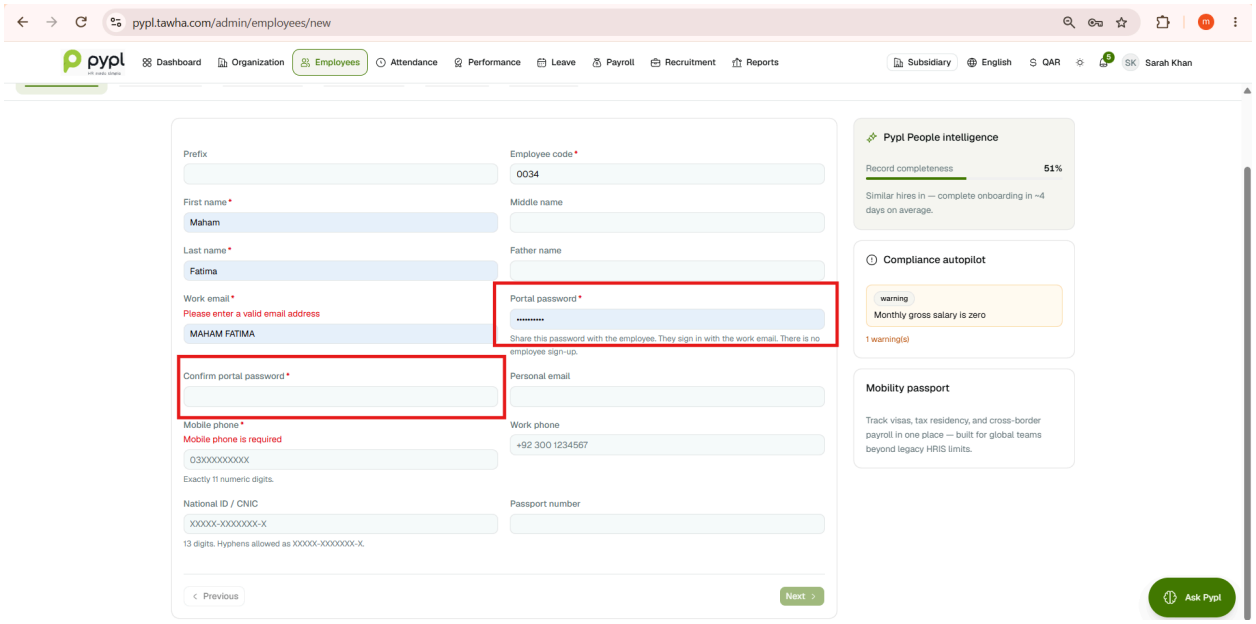
- **Portal Password**
- **Confirm Portal Password**

The icon should allow the user to:

- 👁️ **Show** the entered password.
- 👁️🗨️ **Hide** the password again.

Acceptance Criteria

- Eye icon is available inside both password fields.
- Password is masked by default.
- Clicking the eye icon reveals the password.
- Clicking again masks the password.
- Both fields should work independently.
- The functionality should not expose or store the password insecurely.



TICKET# 114:

Ticket: Mandatory Manager Field Missing Required Asterisk

Module: Admin Portal → Employees → Create Employee
Priority: Medium
Type: UI / Validation

Issue:
The Manager field is mandatory, but its label does not display the required * indicator.

In the screenshot, the Manager field appears as:

Manager

while other mandatory fields such as Country*, Province*, Employee group*, etc. clearly display the asterisk.

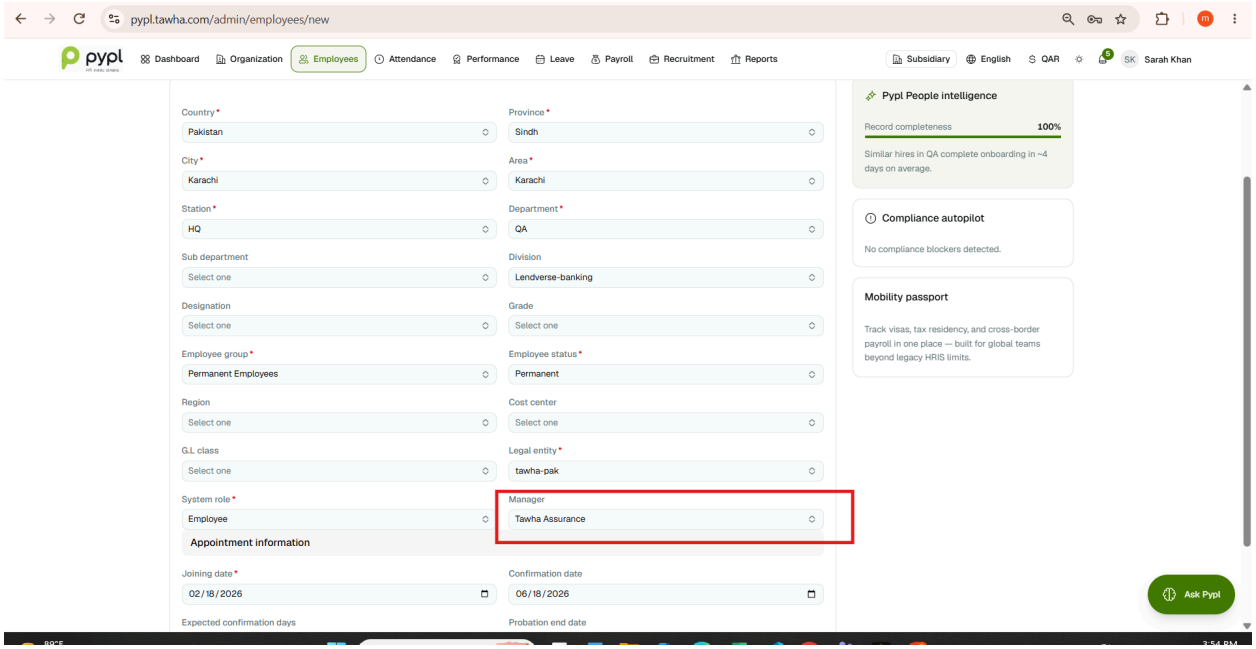
Expected Behavior:

If Manager is a mandatory field, it should be displayed as:

Manager *

Acceptance Criteria

- Add * to the Manager label.
- The field should have the same mandatory-field styling as other required fields.
- If Manager is mandatory, submission should be blocked when no manager is selected.
- Display an appropriate validation message if the field is left empty.
- Frontend and backend mandatory validation should remain consistent.



TICKET# 115:

Ticket: Bank Details Validation Missing in Employee Portal

Module: Employee Portal → Profile → Personal → Edit Bank Details
Priority: High
Type: Validation / Functional Bug

Issue:
Bank detail fields have proper validation in the **Admin Portal**, but the same validation is missing when the employee edits their bank details from the **Employee Portal**.

In the Admin Portal, invalid values correctly trigger validation errors, for example:

- **Account # / IBAN:** invalid length is rejected.

- **Account Title:** numbers are rejected because only letters and spaces are allowed.
- **Branch Code:** invalid characters are rejected.

However, when the employee edits the same bank information from **Employee Portal → Profile → Personal**, invalid values can be entered without displaying any validation error.

Expected Behavior

The **same validation rules must be applied consistently across both portals**.

For example:

Field	Expected Validation
Account # / IBAN	Valid account number/IBAN format and required length
Account Title	Letters and spaces only
Branch Code	Letters, numbers, hyphens, and underscores only

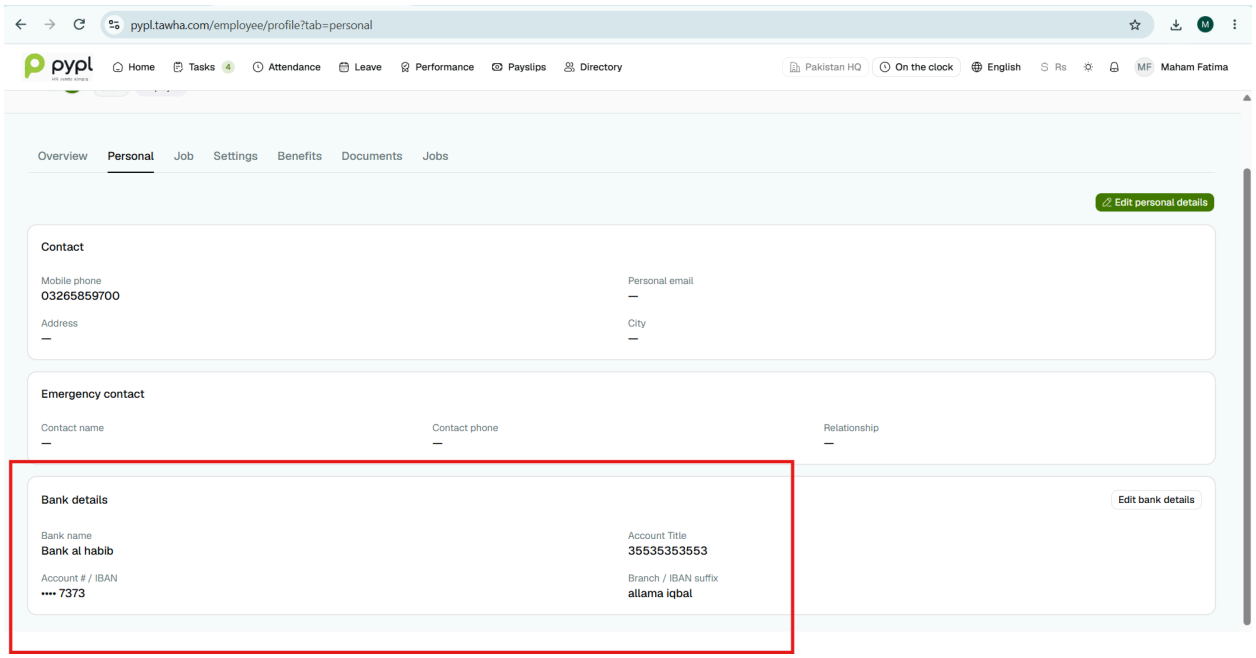
Acceptance Criteria

- Employee Portal should display the same validation errors as the Admin Portal.
- Invalid bank details should not be saved.
- Validation should happen immediately or on form submission.
- Error messages should clearly explain what is invalid.
- Backend validation should also be enforced so employees cannot bypass validation through API requests.
- Admin and Employee portals should use the **same validation rules and validation logic** for bank details.

Example:
If an employee enters `35535353553` as **Account Title**, the Employee Portal should display:

> **Account Title can only contain letters and spaces**

instead of allowing the value to be saved.



TICKET# 116:

Ticket: Payslip Creation and Employee Payslip Synchronization

Module: Admin Portal → Payroll → Payslips
Priority: High
Type: Functional / UI / Data Synchronization

Issue

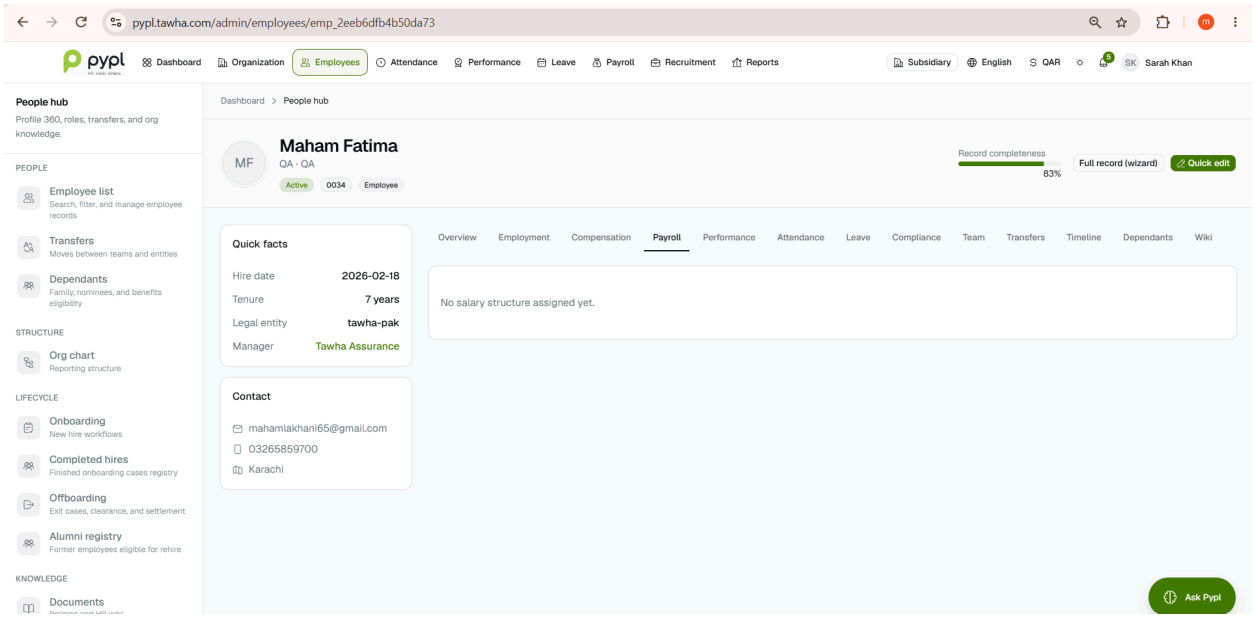
Currently, when clicking **Create payslips** from the **Payslips** module, the system redirects the user to the **Pay Runs** module.

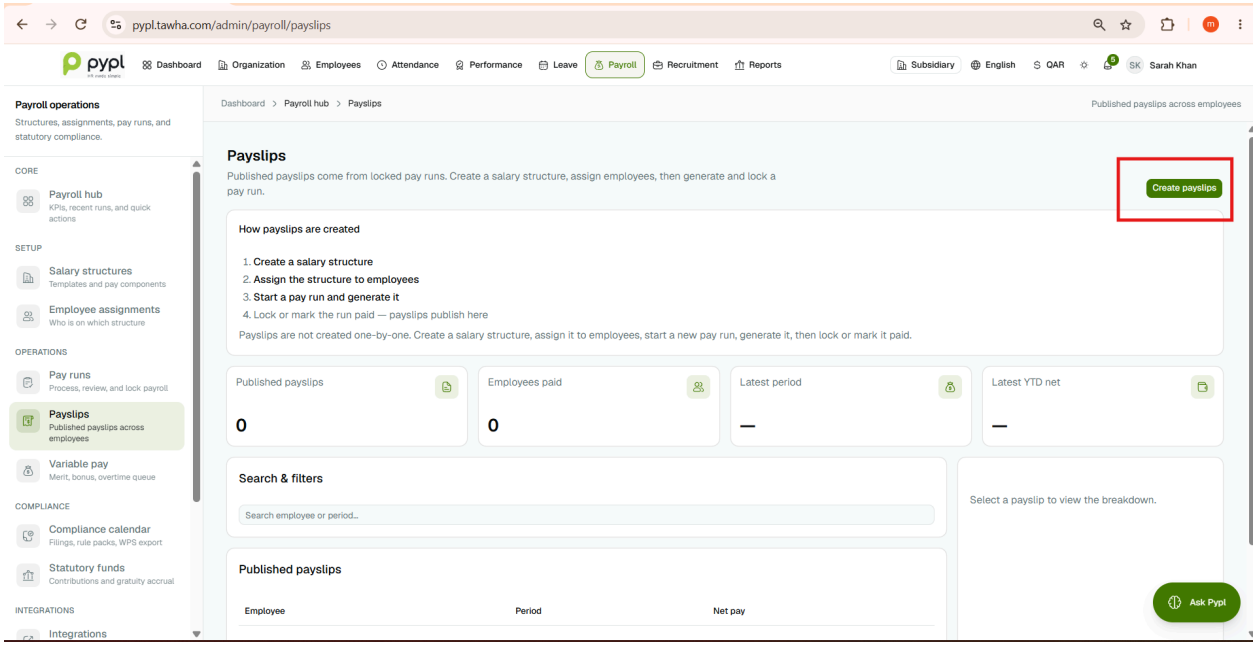
The Payslips module should provide a dedicated, clean payslip creation/viewing experience instead of simply redirecting to Pay Runs.

Additionally, when a payslip is generated for an individual employee, the same payslip should be available from both the **Admin Portal** and the **Employee Portal**, using the **same payslip/invoice number**.

Expected Behavior

1. **Create Payslips**
    - Clicking **Create payslips** should open a dedicated payslip generation interface.
    - The interface should have a clean, modern layout similar to the visual style of a **Vercel-style web interface**.
    - Admin should be able to select:
        - Employee
        - Payroll period
        - Salary structure/pay components
        - Applicable deductions/taxes
    - Admin should be able to generate/publish the payslip from this interface.
2. **Admin Employee Payslip**
    - When Admin opens an individual employee's profile → **Payroll**, the employee's generated payslip should be displayed.
    - Admin should be able to view the complete payslip details.
    - The payslip should have a unique payslip number, e.g. `PS-2026-0001`.
3. **Employee Portal**
    - Once the payslip is published, the same payslip should automatically become available in the employee's **Employee Portal** → **Payslips**.
    - The employee should see the **exact same payslip data** as the Admin Portal.
4. **Same Payslip Number**
    - The Admin Portal and Employee Portal must reference the **same payslip record/ID**.
    - The payslip number must be identical in both portals.





TICKET# 117:

Ticket: Employee Attendance Avatar API Returns 404

Module: Employee Portal → Attendance
Priority: Medium
Type: Bug / API

Issue

When accessing the **Attendance** module from the Employee Portal, the application sends a request to retrieve the employee avatar:

`GET /api/employee/employees/{employee_id}/avatar`

However, the API returns **404 Not Found**, as shown in the browser Network tab.

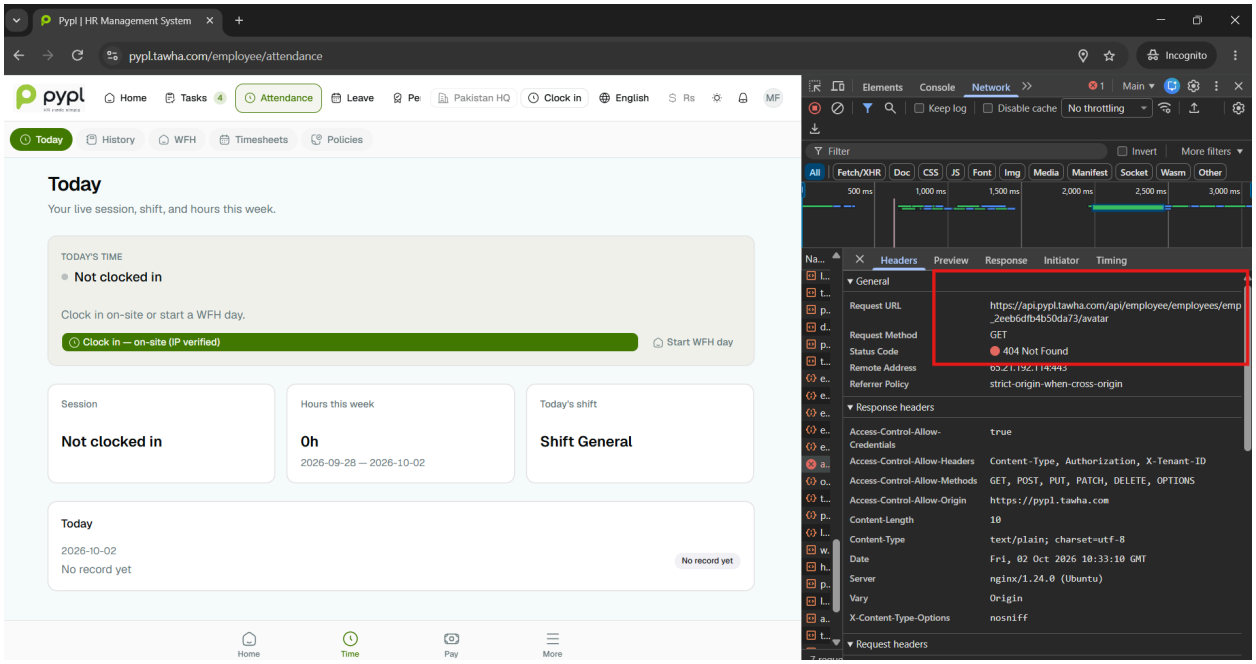
This results in a failed avatar request and may cause the employee profile/avatar to not load correctly.

Expected Behavior

- The employee avatar API should return the employee's avatar successfully when a valid employee ID is provided.
- If the employee does not have an avatar, the API should return an appropriate response and the UI should display a default avatar/initials instead of generating a 404 error.
- The frontend should handle missing avatar responses gracefully.
- The API endpoint used by the Employee Portal should match the correct backend employee/avatar endpoint.

Acceptance Criteria

- Valid employee ID returns the employee avatar successfully.
- No unnecessary `404 Not Found` request is generated for a valid employee.
- If no avatar exists, a default avatar/initials are displayed.
- API response is handled correctly by the frontend.
- No broken image/avatar is displayed.
- The fix works consistently across Employee Portal pages where the employee avatar is loaded.



TICKET# 118: (5/10/2026)

Ticket: Add Edit Option for Clock-Out Time in Attendance Ledger

Module: Admin Portal → Attendance → Time & Attendance Ledger
Priority: Medium
Type: Enhancement / Functional

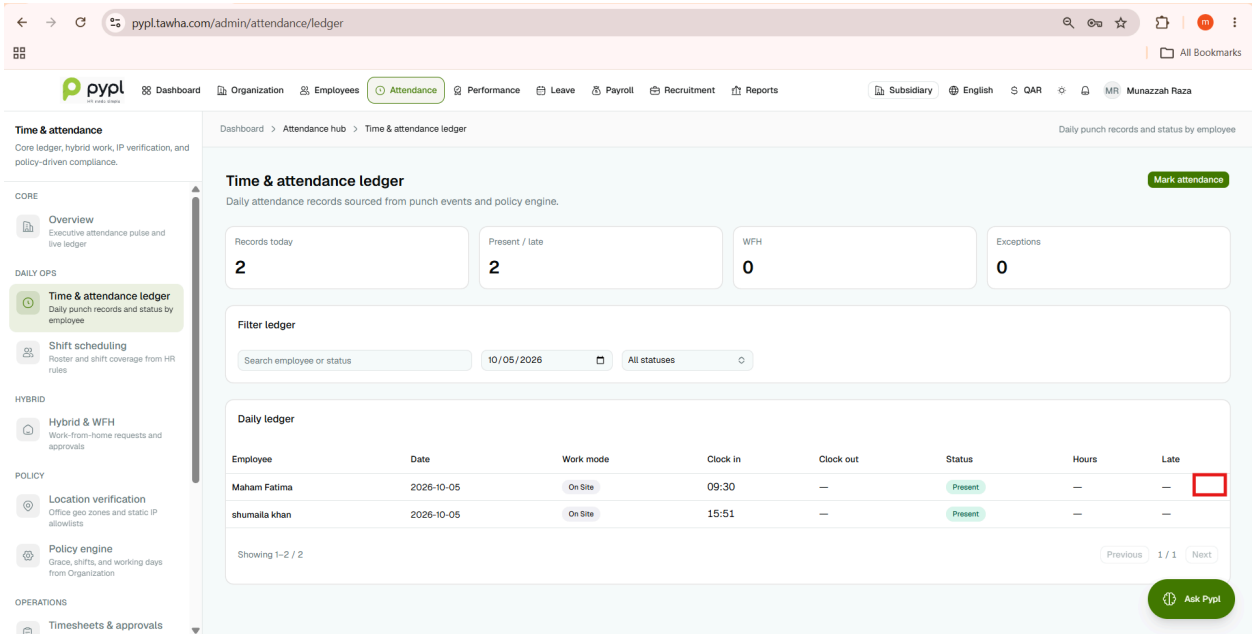
Issue

In the **Daily Ledger**, employees have a **Clock in** time but the **Clock out** column is empty (–) and there is currently no option to manually edit or add the clock-out time.

Expected Behavior

- Add an **Edit** action for each attendance record.
- Admin/authorized HR users should be able to edit the **Clock out** time.
- The edited clock-out time should update the employee's attendance record.

- **Hours worked** should automatically recalculate based on Clock in and Clock out.
- Any applicable **Late/attendance status** calculations should also update accordingly.
- Changes should be saved to the backend and reflected consistently in the Employee Portal.
- An audit trail should record who modified the attendance record and when.



TICKET# 119:

Ticket: WFH Requests Not Synchronized Between Student/Employee and Admin Portals

Module: Attendance → Hybrid & WFH
Priority: High
Type: Functional / Data Synchronization

Issue

There are two portals for WFH requests:

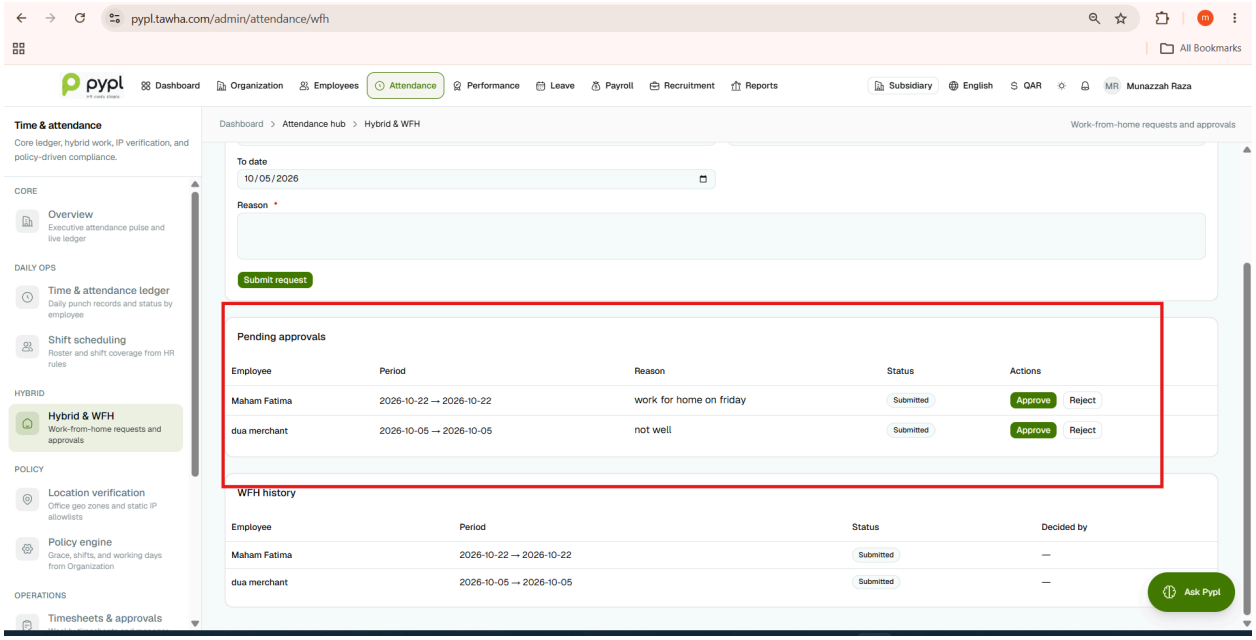
1. **Student/Employee Portal** — employee submits a WFH request.
2. **Admin Portal** — Admin reviews and approves/rejects WFH requests.

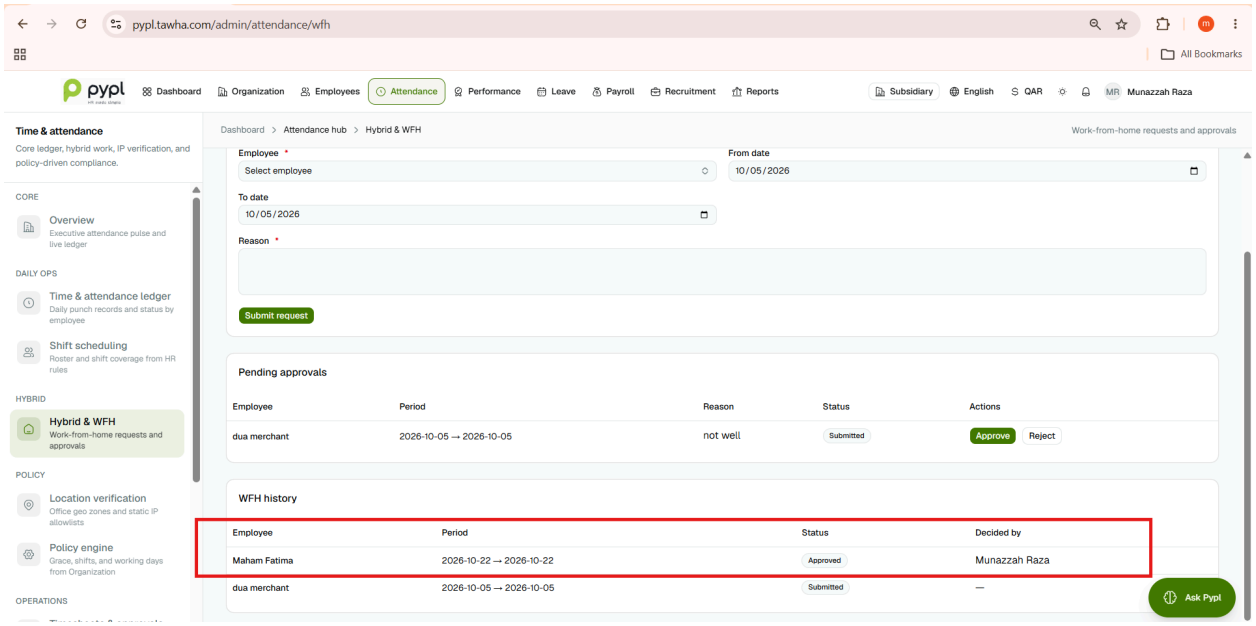
Currently, WFH requests are **not synchronized between the two portals**.

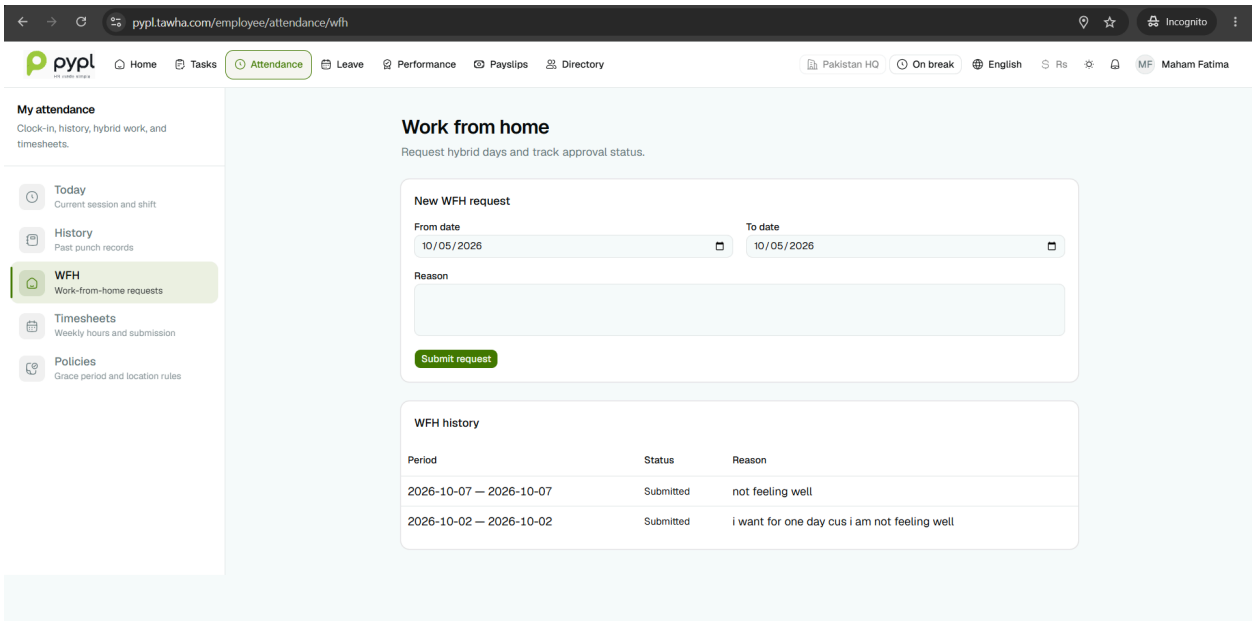
- When a WFH request is submitted from the **Student/Employee Portal**, it does not appear in **Admin → Hybrid & WFH → Pending approvals**.
- When a WFH request is created from the **Admin Portal**, it does not appear in the **Student/Employee Portal → WFH History**.
- When Admin **approves or rejects** a request, the updated status is not reflected in the Employee Portal.

Expected Behavior

Both portals should use the **same WFH request record/data source**.







TICKET# 120:

Ticket: Invitation Email Contains Localhost URL

Module: Employee Portal → Employee Invitation
Priority: High
Type: Bug / Configuration

Issue

When an employee invitation is sent, the email contains a **localhost URL**:

```
http://localhost:7216/sign-in
```

As a result, the employee cannot use the invitation link unless they are accessing the application from the same local development environment.

Expected Behavior

The invitation email should contain the **deployed/production application URL**, not a localhost/development URL.

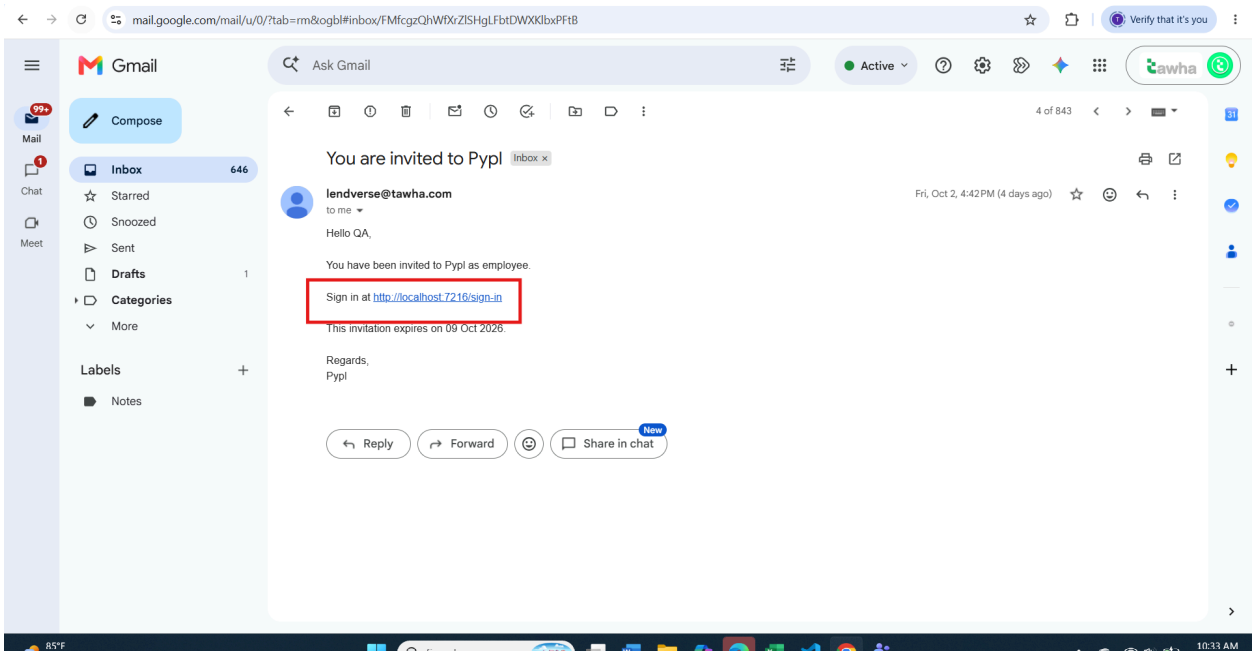
For example:

```
https://pypl.tawha.com/sign-in
```

The URL should be generated dynamically based on the active environment:

- **Development:** development URL
- **Staging:** staging URL
- **Production:** production URL

The system should not hardcode `localhost` in invitation emails.



TICKET# 121:

Ticket: Deleted Employee Cannot Be Deleted Again and Still Appears in Manager Dropdown

Module: Admin Portal → Employees
Priority: High
Type: Bug / Data Integrity

Issue

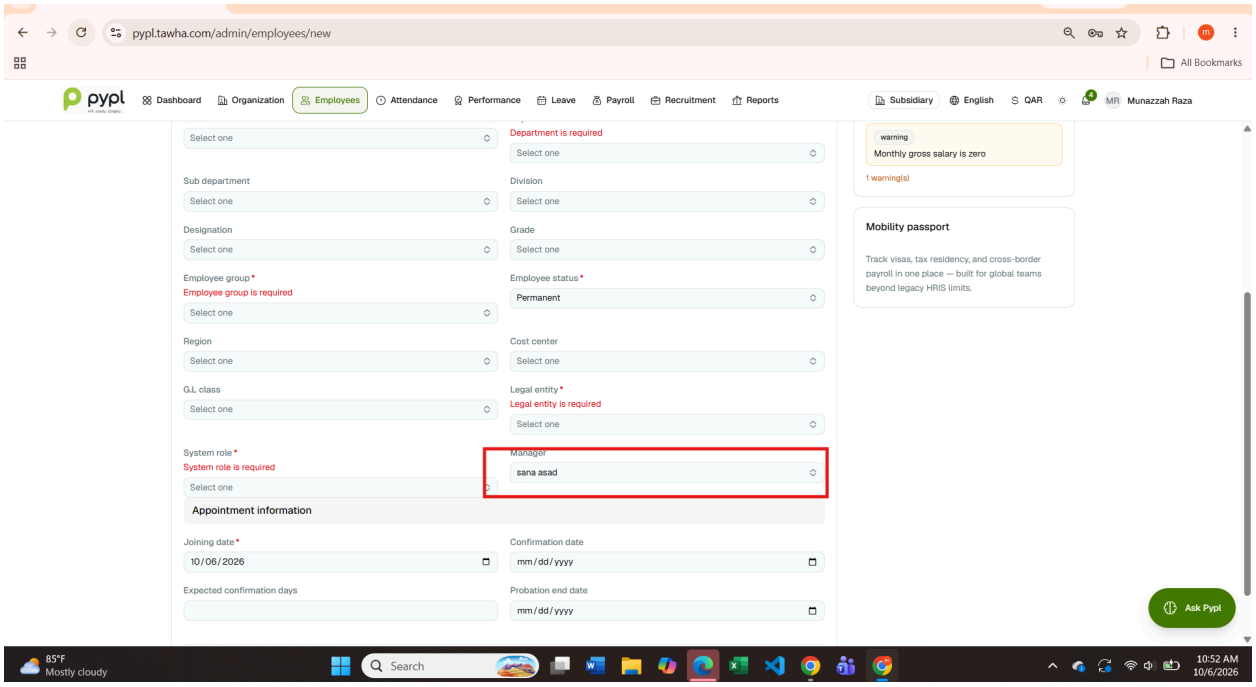
When employee **Sana Asad** is deleted from the Active Employees list, the employee is moved to the **Inactive** list instead of being permanently deleted.

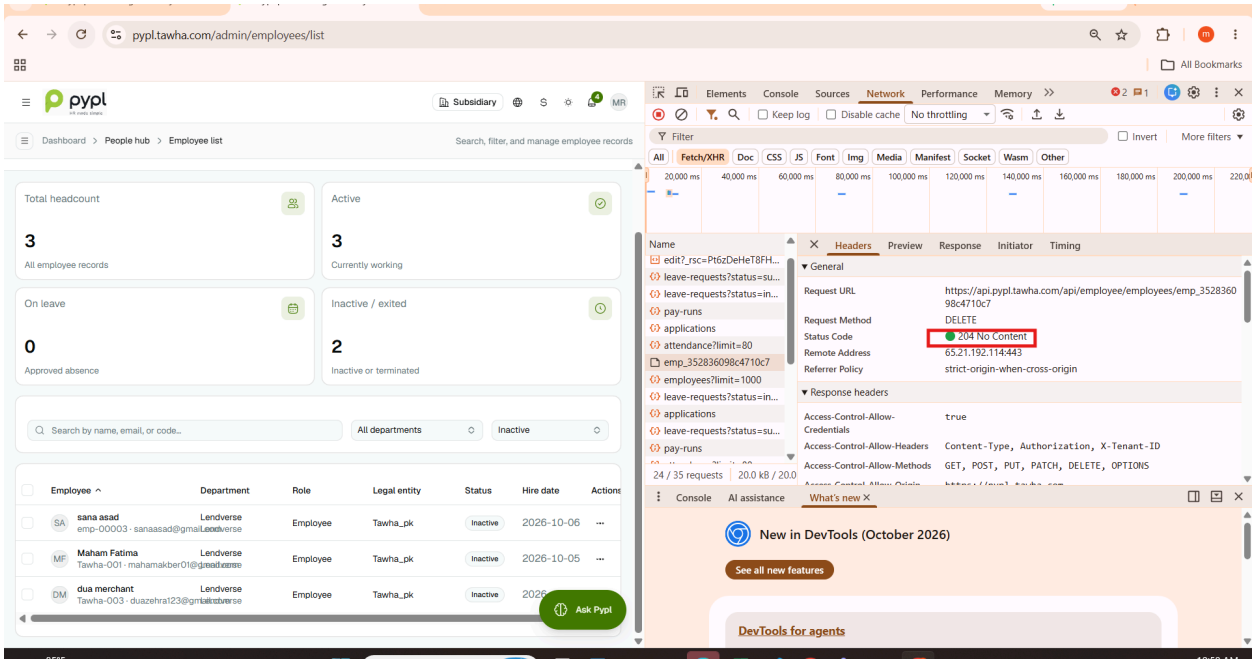
When attempting to delete the same employee again from the Inactive list, the delete request fails with **HTTP 204/No Content behavior**, and the employee remains in the system.

Additionally, the deleted/inactive employee **Sana Asad still appears in the Manager dropdown** while creating a new employee.

Expected Behavior

1. If the system uses **soft delete**:
    - Employee should be marked as Inactive/Terminated.
    - Inactive employees should **not appear in Manager dropdowns**.
    - Only Active employees should be selectable as managers.
2. If permanent deletion is supported:
    - Delete action from the Inactive list should successfully remove the employee.
    - The employee should no longer appear anywhere in active employee references/dropdowns.
3. Manager dropdown should refresh from the latest employee status and exclude deleted/inactive employees.





TICKET# 122:

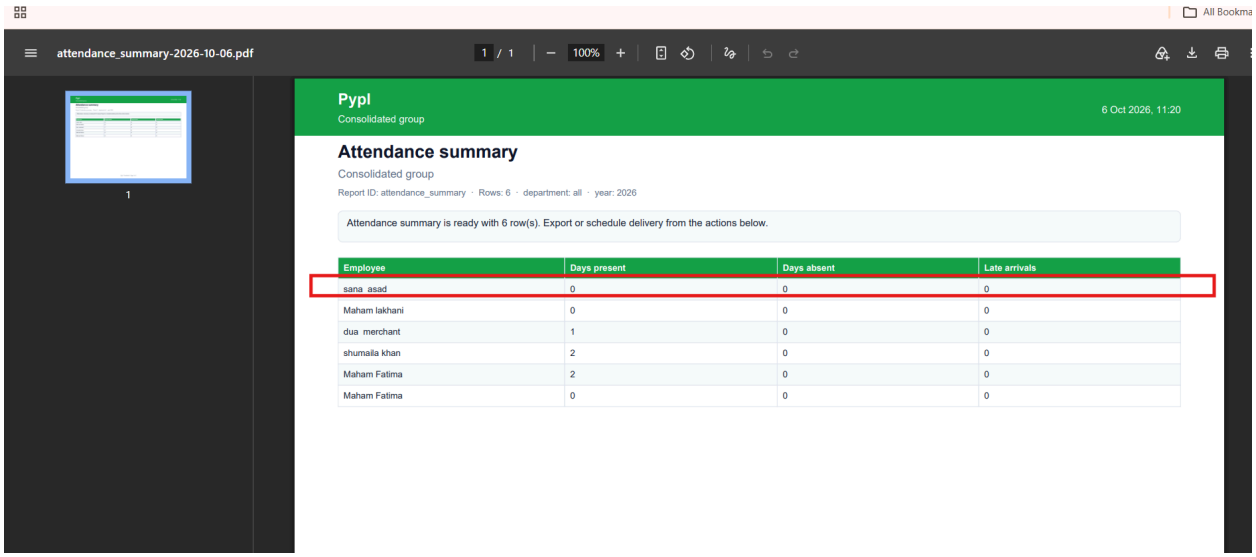
Ticket: Deleted Employee Appears in Attendance PDF Report

Module: Admin Portal → Reports → Attendance Summary
Priority: High
Type: Bug

Issue:
After deleting/deactivating employee **Sana Asad** from the employee list, Sana Asad is still appearing in the generated **Attendance Summary PDF**.

Expected Behavior:

- Deleted/inactive employees should be excluded from newly generated attendance reports by default.
- The report should only include **active employees**.
- If historical inactive employees need to be included, there should be an explicit **"Include inactive employees"** filter/option.



TICKET# 123:

Ticket: Leave Quota and Blackout Policy Not Applied Consistently Across Portals

Module: Leave Management → Policies / Leave Request
Portals: Admin Portal & Employee Portal
Priority: High
Type: Functional / Business Logic

Issue

The **From/To date validation is working correctly**, but the leave quota/entitlement and blackout-period logic is not being applied consistently.

The Employee Portal shows:

> Annual quota: **5 days**

but when requesting 1 day of leave, the system shows:

> Current balance: **0d**
> After submit: **-1d**
> Insufficient balance for this request.

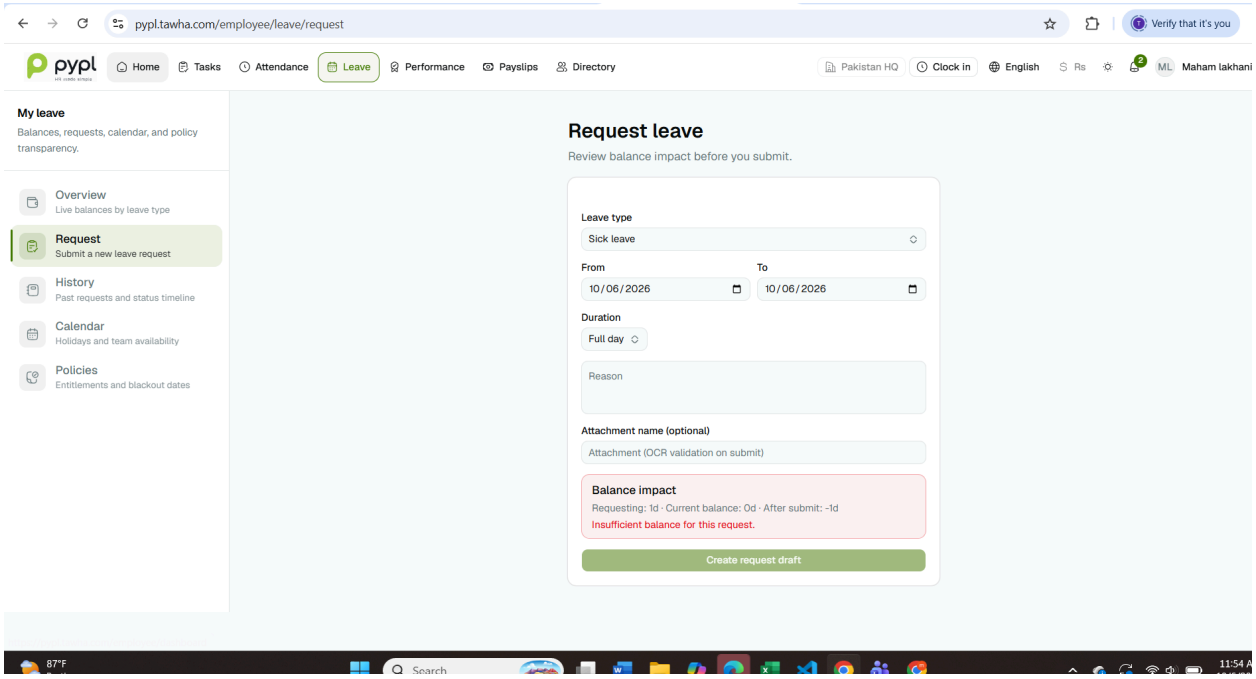
This indicates that the configured leave quota is not being correctly reflected in the employee's actual leave balance.

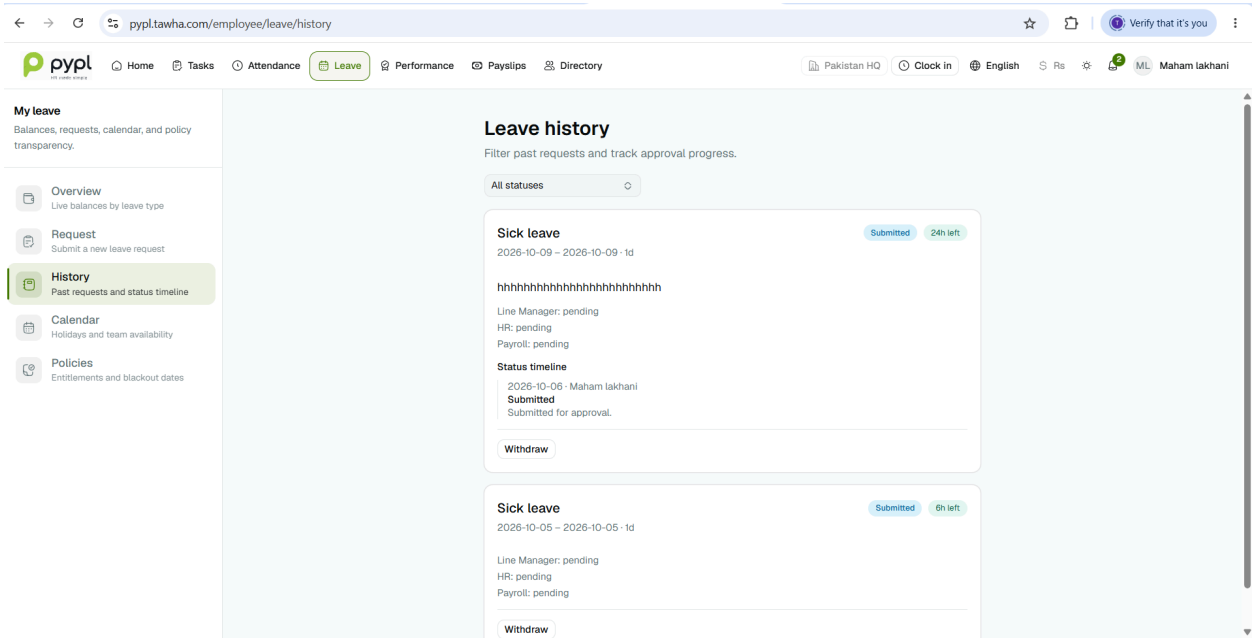
Expected Behavior

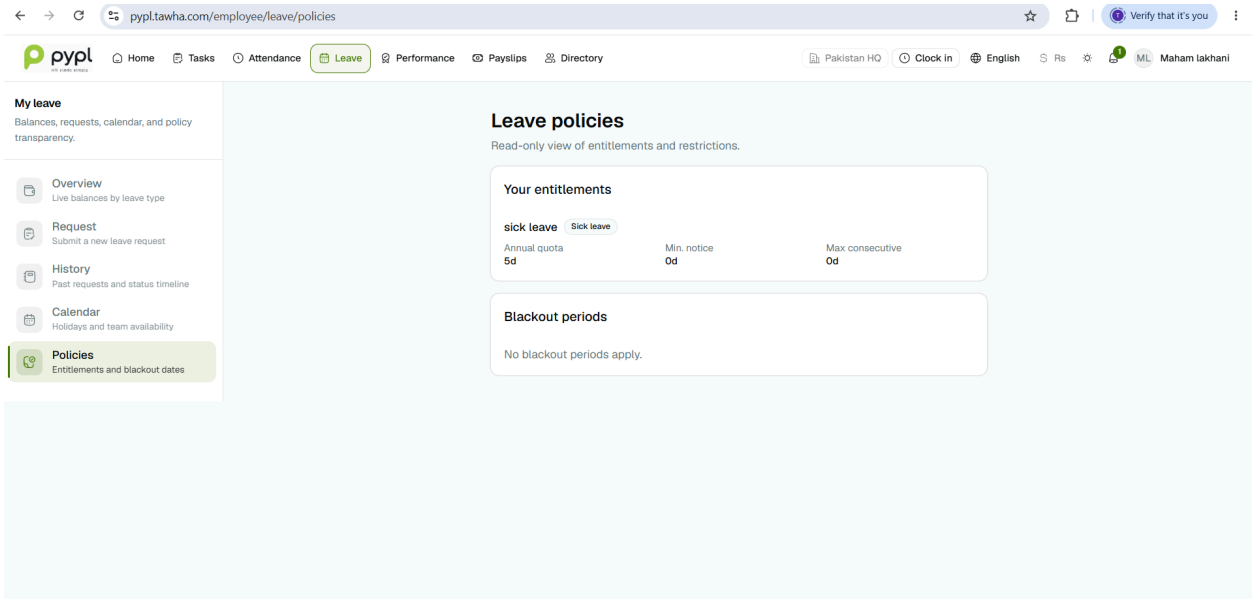
1. **Leave quota should be correctly linked to employee entitlement**
    - If the policy provides **5 days annual quota**, the employee should have the corresponding available balance unless previously consumed.
    - The balance should decrease according to approved/requested leave.
2. **Quota rules should apply to both past and future dates**
    - The same entitlement/quota calculation should be applied whether the employee requests leave for a previous date or a future date, unless a separate backdated-leave restriction is configured.
    - Example:
        - Quota = 5 days
        - Request = 1 day
        - Available balance should become 4 days after the applicable transaction.
3. **Admin and Employee portals must use the same policy logic**
    - Leave quota, entitlement, balance, and validation should be consistent across both portals.
    - A leave request created from either portal should use the same underlying policy and employee balance.
4. **Blackout periods must be enforced**
    - If Admin configures a blackout period where leave is not allowed, employees should not be able to submit leave during that period.

- The Employee Portal should clearly display the applicable blackout period under **Leave → Policies**.
- Example:
  - Blackout: 10 Oct–15 Oct
  - Employee requests leave on 12 Oct
  - System should block the request and show an appropriate validation message.

5. **Manager rejection should not create a blackout period**
   - If a manager rejects a leave request, it should remain **Rejected** in Leave History.
   - It should not automatically become or create a blackout period.
   - Blackout periods should only come from configured Admin/HR policy.







TICKET# 124:

Ticket: Review Template Not Available in Employee Portal

Module: Performance → Review Templates / Reviews
Portals: Admin Portal & Employee Portal

Priority: High
Type: Functional / Data Synchronization

Issue:
A review template named **“QA Performance Review”** is successfully created and visible in the Admin Portal with 3 competencies, annual review type, self-assessment, manager review, and upward feedback enabled.

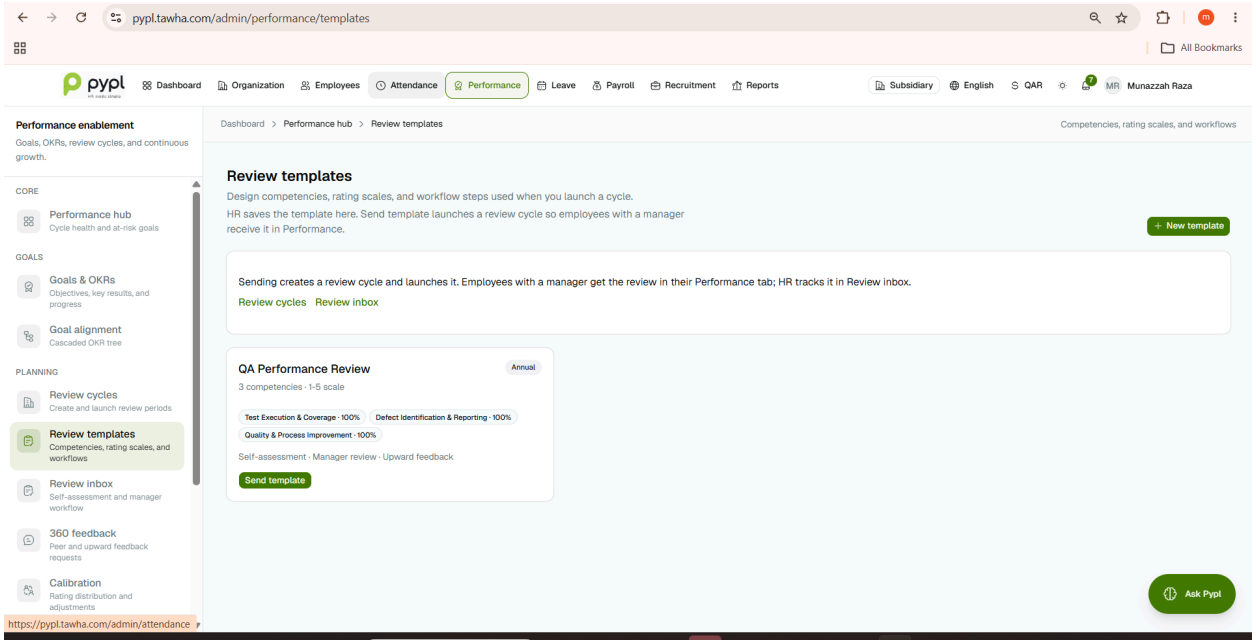
However, when the employee opens the assigned review from the Employee Portal, the system displays:

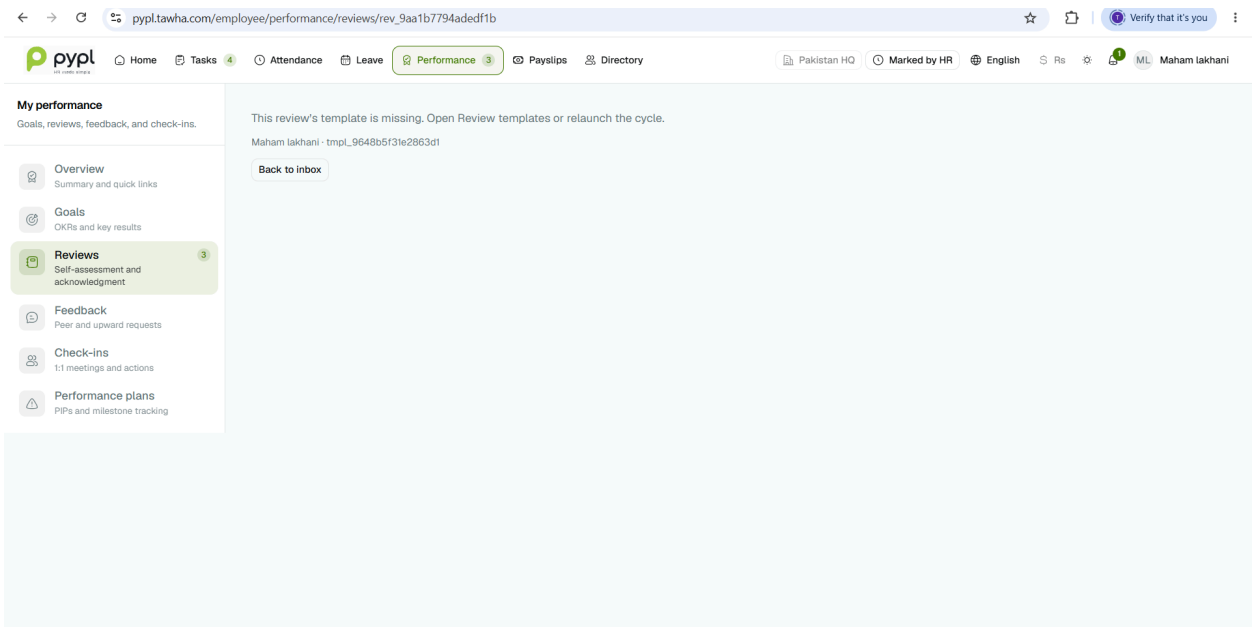
> “This review’s template is missing. Open Review templates or relaunch the cycle.”

The employee cannot access or complete the review.

Expected Behavior:

1. When Admin creates a review template, it should be available for use when launching a review cycle.
2. When the template is sent/launched for an employee, the review should retain a valid reference to that template.
3. The employee should be able to open the review from **Employee → Performance → Reviews**.
4. The employee should see the same:
    - Review template name
    - Competencies
    - Rating scale
    - Self-assessment fields
    - Manager review workflow
    - Upward feedback, if enabled
5. The template must not appear as “missing” after the review has been assigned/launched.
6. Admin and Employee portals should reference the **same template/review-cycle data**.
7. If a template is deleted or archived, existing launched reviews should either retain a snapshot of the template or be handled through a controlled migration—not become inaccessible.





TICKET# 125:

Ticket: Employee Leave Balance Not Synced With Admin Leave Policy

Module: Leave Management → Entitlements & Balances / Employee Leave Overview
Portals: Admin Portal & Employee Portal
Priority: High
Type: Functional / Data Synchronization

Issue:
The Employee Portal currently shows:

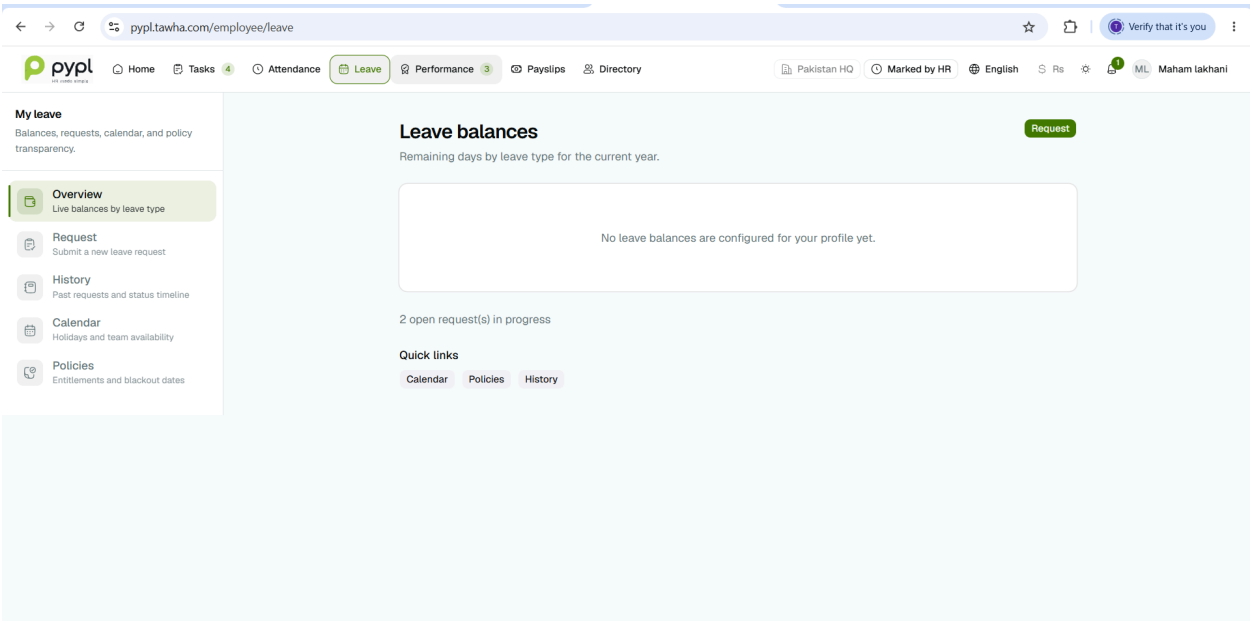
> **“No leave balances are configured for your profile yet.”**

However, leave types and quotas are configured from the Admin Portal. The employee's leave balance should be automatically derived from those Admin-side configurations.

Expected Behavior

1. **Admin Portal should be the source of truth**
    - Admin configures the leave type.
    - Admin defines the annual quota/entitlement.
    - The employee assigned to that policy should automatically receive the corresponding leave balance.
2. **Employee Portal should display the configured balance**
   For example:
   Admin Portal
    - Leave type: Sick Leave
    - Annual quota: 5 days
    - Employee: Maham Lakhani
3. **Employee Portal → Leave → Overview**
    - Sick Leave
    - Entitled: 5 days
    - Used: 0 days
    - Pending: 0 days
    - Remaining: **5 days**
4. **Balance should update dynamically**
    - Approved leave → deduct from available balance.
    - Pending leave → show as pending/reserved according to the configured business rule.
    - Rejected/withdrawn leave → balance should be restored/not deducted.
    - New entitlement/quota configured by Admin → employee balance should reflect it.
5. **Same data across both portals**
    - Admin and Employee should show the same leave type, quota, used days, pending days and remaining balance.
    - Employee should not show **“No leave balances are configured”** when an applicable entitlement exists in Admin.
6. **Leave request should use the same balance**

- The balance displayed on the Employee Overview must match the balance used when creating a leave request.
- Example: If Overview shows **5 days remaining**, requesting 1 day should show **4 days remaining after approval**, not `0d` or `-1d`.



TICKET# 126:

Ticket: Goal Progress and Performance Review Status Cannot Be Updated

Module: Performance → Goals & OKRs / Reviews
Portal: Employee Portal
Priority: High
Type: Functional / Workflow Issue

Issue

The employee is able to view the assigned goal and performance review, but there is no available action to update the **goal progress** or start/change the **performance review status**.

For the goal:

- Overall progress is displayed as **0%**.
- No Key Results are available/visible on the goal detail page.
- There is no **Update Progress / Update Key Result** action for the employee.

For the performance review:

- The review is displayed as **Not Started**.
- There is no **Start Review / Open Review** action available to the employee.
- The employee therefore has no way to initiate the review workflow.

Expected Behavior

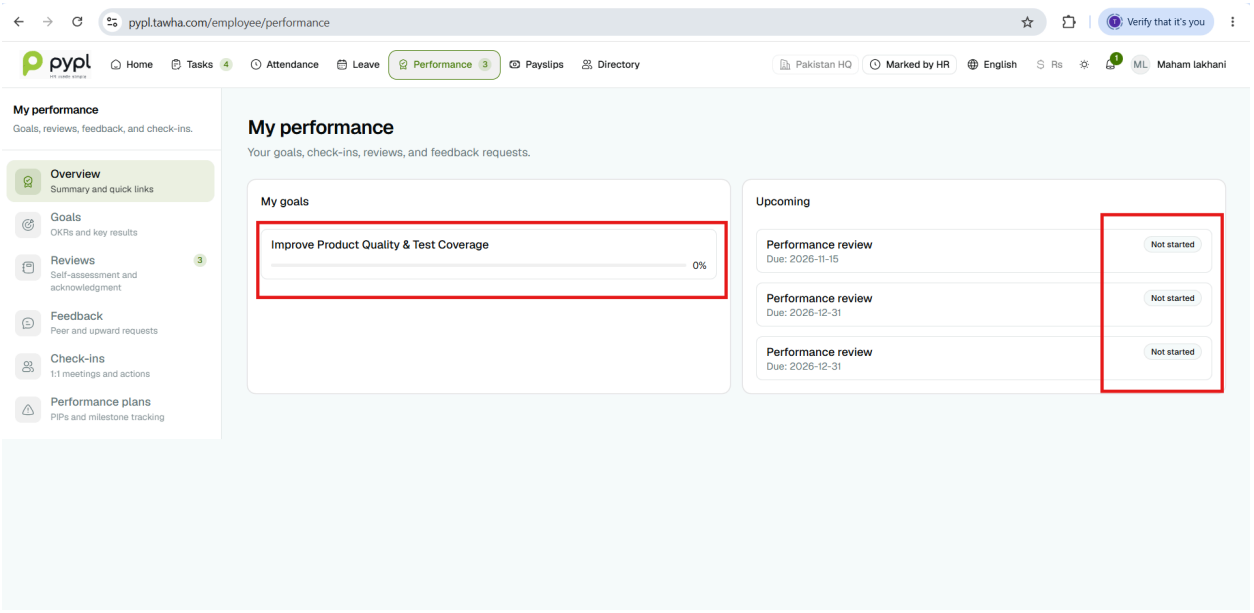
Goal Progress

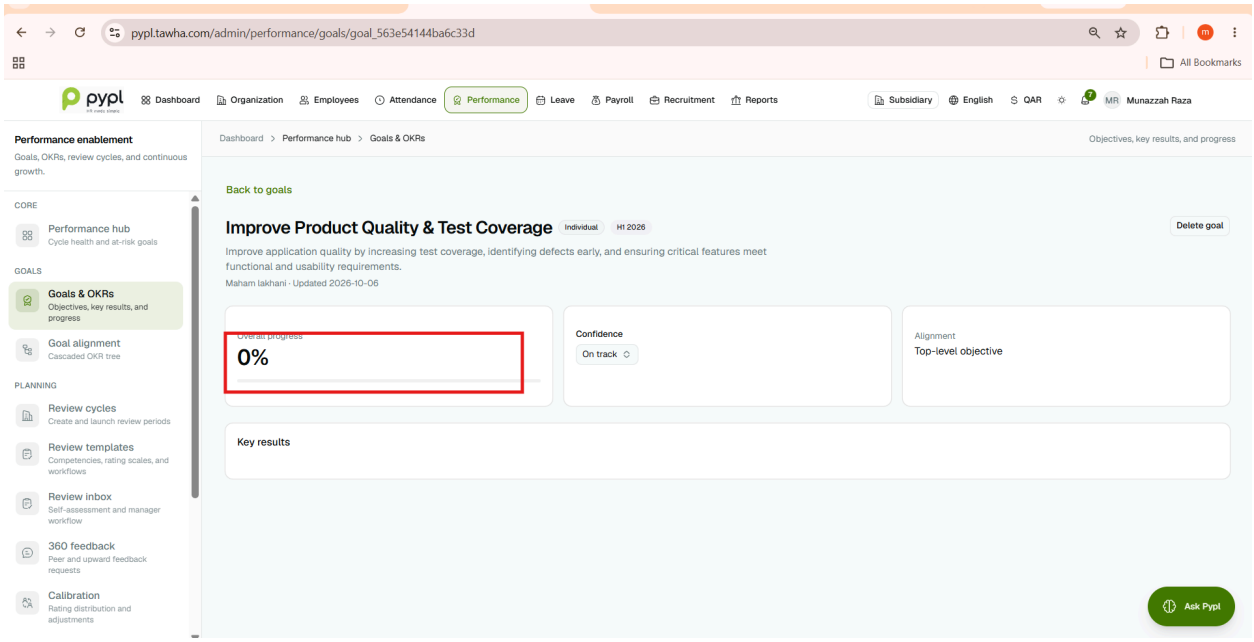
The employee should be able to update the progress of their assigned Key Results.

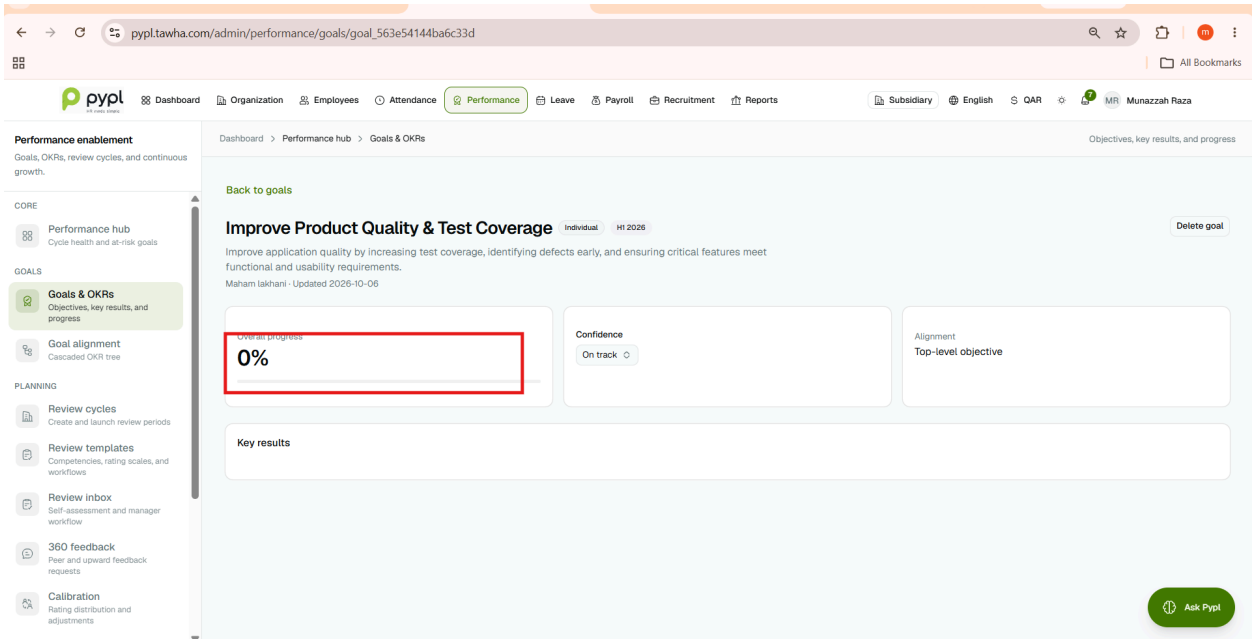
Example:

> Key Result target = 100
> Current progress = 40
> Goal overall progress = 40%

The overall goal progress should automatically recalculate based on the Key Result progress.







TICKET# 127:

Ticket: Attendance Clock-In/Clock-Out and Admin Verification Workflow

Module: Employee Portal → Attendance / Admin Portal → Time & Attendance
Priority: High
Type: Functional / Workflow

Issue

Currently, when HR/Admin marks an employee's attendance, the employee portal only shows **“Marked by HR”** and does not provide a proper **Clock In / Clock Out** option.

The attendance system should support two scenarios:

1. **HR/Admin manually records attendance**
2. **Employee records their own Clock In/Clock Out**

These two sources should be handled differently and properly synchronized between both portals.

Expected Behavior

1. HR/Admin marks attendance

If HR/Admin enters:

- Clock In: `09:00 AM`
- Clock Out: `06:00 PM`

Then the employee should see:

> **Marked by HR**
> Clock In: 09:00 AM
> Clock Out: 06:00 PM

The employee **must not be able to modify or overwrite** HR/Admin-entered attendance.

The Clock In/Clock Out buttons should either be disabled or hidden for that day.

---

2. Employee clocks in/out

If attendance has **not** been marked by HR/Admin, the employee should see:

> **Clock In**

After clicking Clock In:

> **Clocked In — 09:15 AM**

The employee should then see:

Clock Out

After clicking Clock Out:

Clocked Out — 06:05 PM

The system should calculate the total working hours from the recorded timestamps.

---

3. Employee-entered attendance requires verification

If an employee records their own attendance, the record should be identified as:

Employee Clock-In/Clock-Out

and should be available to HR/Admin for verification.

Example:

Employee	Clock In	Clock Out	Source	Status
Maham Lakhani	09:15 AM	06:05 PM	Employee	Pending Verification

Admin should be able to **Verify / Approve / Reject** the employee's attendance record.

---

4. Time validation

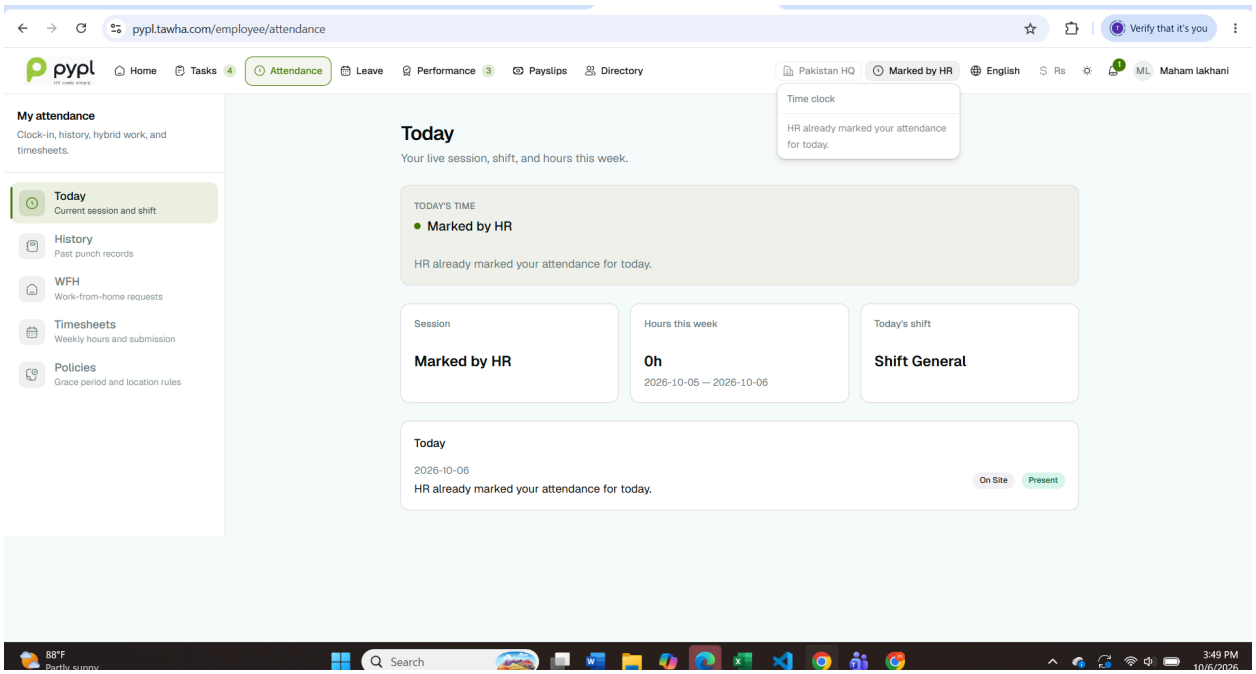
The system should validate the actual timestamps against the employee's logged attendance/session.

For example:

- Employee clocks in at **09:15 AM**
- Employee clocks out at **06:05 PM**

- System calculates **8h 50m**
- Admin can review the actual timestamps before approving.

The system should not allow an employee to manually enter arbitrary clock-in/clock-out times and treat them as genuine punch times without verification.



TICKET# 128:

Ticket: Duplicate Performance Review Tasks Appearing on Employee Dashboard

Module: Employee Portal → Dashboard → For You
Priority: Medium
Type: Bug / Data Duplication

Issue

The **“For You”** section on the Employee Dashboard is displaying the same **“Complete self-assessment”** task multiple times for the same employee.

In the screenshot, **Maham Lakhani** has three self-assessment tasks:

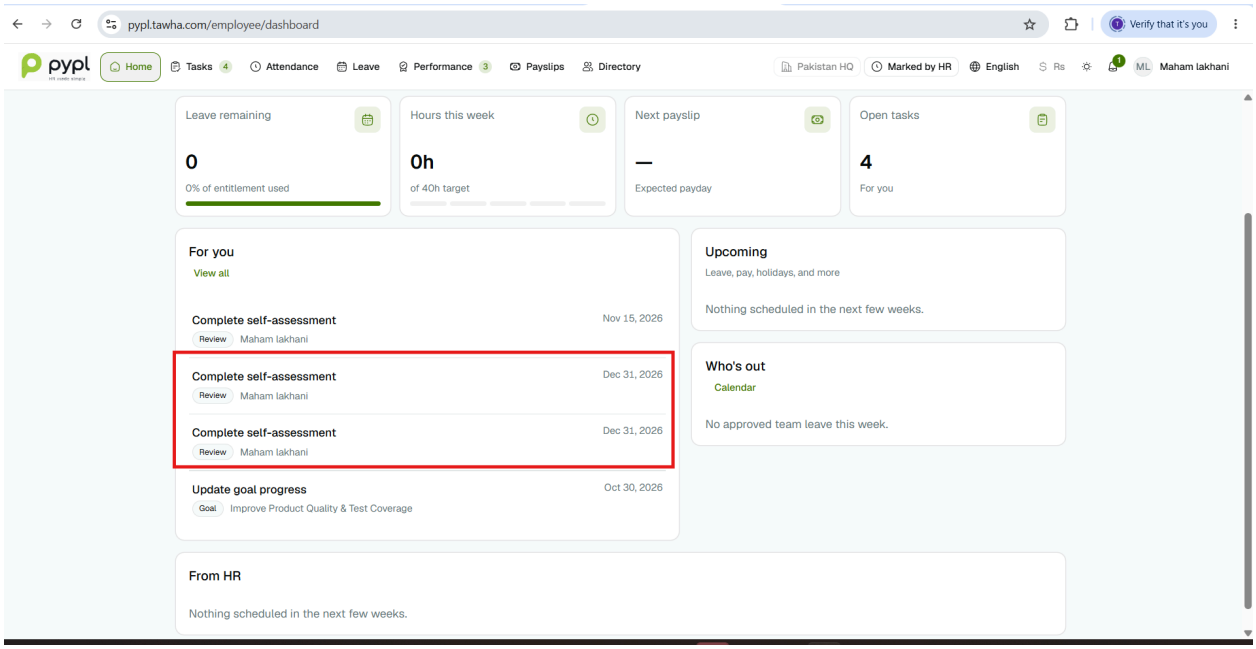
- Complete self-assessment — **Nov 15, 2026**
- Complete self-assessment — **Dec 31, 2026**
- Complete self-assessment — **Dec 31, 2026**

The two entries with **Dec 31, 2026** appear to be duplicates of the same review/task.

Expected Behavior

Each assigned performance review/self-assessment should appear **only once** on the employee dashboard.

If multiple reviews genuinely exist, each should have a unique review/cycle identifier and relevant information so the employee can distinguish them.



TICKET# 129:

Ticket: Employee Dropdown Disabled When Creating Payslip

Module: Admin Portal → Payroll → Payslips → Create a Payslip
Priority: High
Type: Functional / UI Issue

Issue

In the **Create a Payslip** modal, the **Employee** dropdown is disabled and cannot be opened or used.

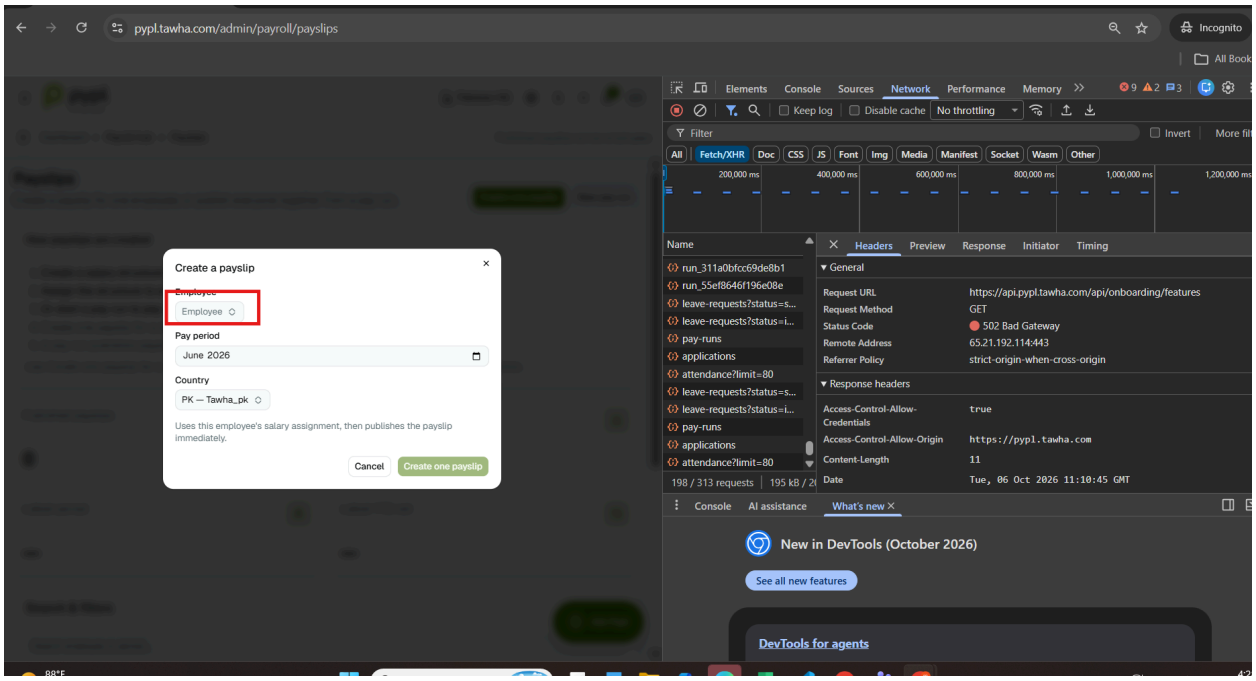
Because of this, the Admin cannot select an employee for whom the payslip needs to be generated.

Expected Behavior

The **Employee** dropdown should be enabled and should display eligible employees from the Employee directory.

Admin should be able to:

1. Open the Employee dropdown.
2. Search/select an employee.
3. Select the required pay period.
4. Select the applicable country/legal entity.
5. Create the payslip for the selected employee.



TICKET# 130:

Ticket: Employee Payslip Details Not Showing and Not Synced with Employee Portal

Module: Admin Portal → Payroll → Pay Runs / Payslips
Portal: Admin & Employee
Priority: High
Type: Functional / Data Synchronization

Issue

In the Admin Portal, the payroll run shows **0 employees, 0 Gross, 0 Deductions, and 0 Net Pay**, and the **Employee Pay Lines** section is empty.

The generated/available payslip data is also not linked correctly with the corresponding employee in the Employee Portal. As a result, employees cannot see their payroll/payslip information from their **Payslips** section.

Expected Behavior

Once an employee has a valid salary/payroll assignment and a payroll run is generated:

Admin Portal:

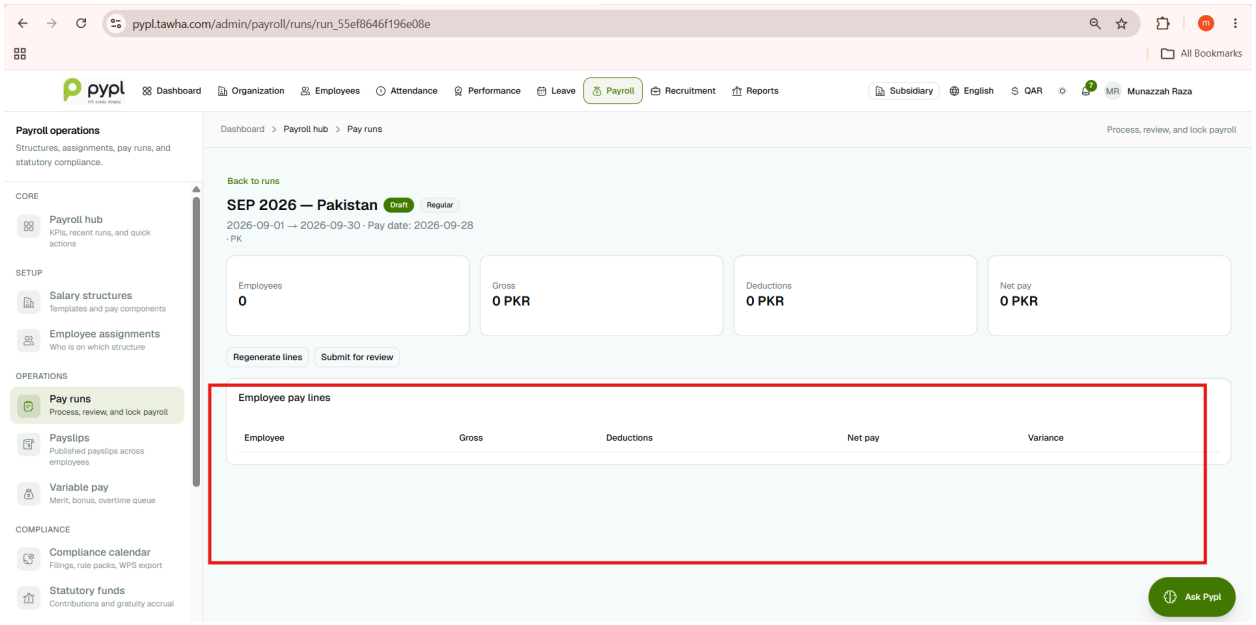
- Employee should appear under **Employee Pay Lines**.
- Gross salary should be displayed.
- Deductions should be displayed.
- Net pay should be calculated and displayed.
- Payroll data should be linked to the correct employee.

Employee Portal:

- The employee should be able to see their generated payslip under **Payslips**.
- Payslip details should match the payroll run generated by Admin.
- Employee should only see **their own** payslip data.

Expected Data Flow

`Employee Salary Assignment → Payroll Run → Employee Pay Line → Payslip → Employee Portal`



TICKET# 131:

Ticket: Feedback Submission Fails with “Performance: Record Not Found”

Module: Performance → Feedback
Portal: Admin / Manager Portal → Employee Portal
Priority: High
Type: Functional / Backend Integration

Issue

When an Admin/Manager opens the **Submit Feedback** modal and submits feedback with a valid rating and feedback text, the system displays:

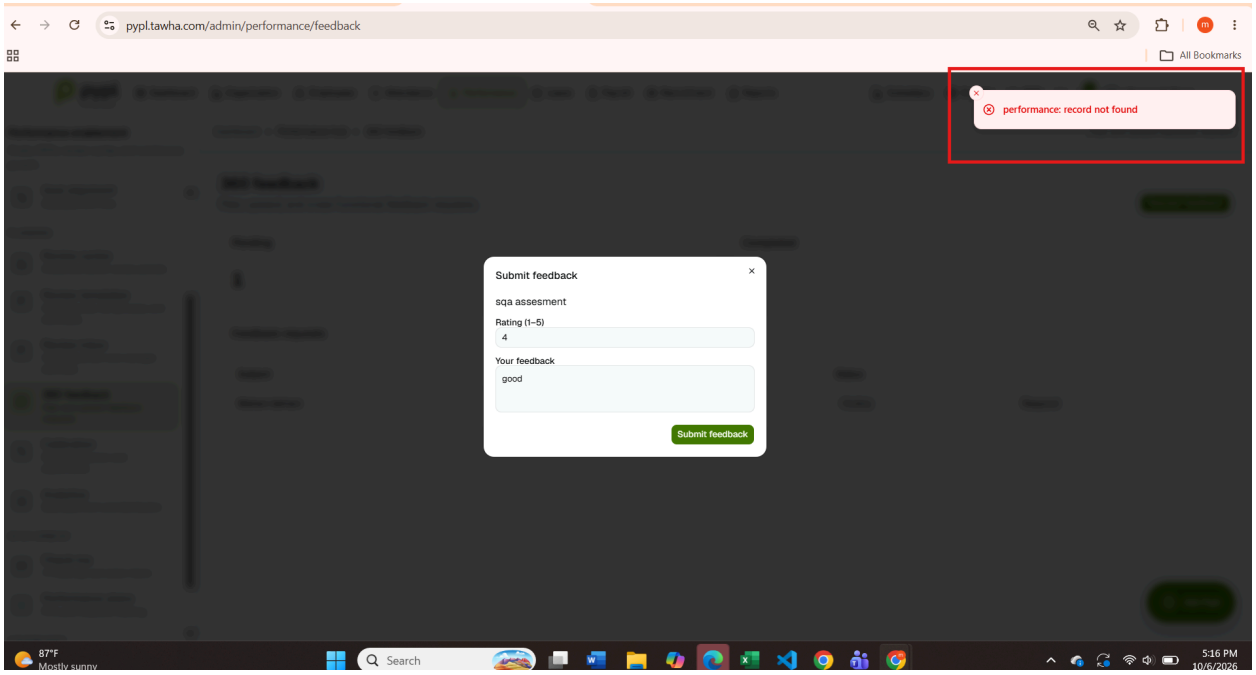
> **“performance: record not found”**

As a result, the feedback submission fails and the feedback is not available in the Employee Portal.

Expected Behavior

- Admin/Manager should be able to submit feedback successfully for the selected employee.
- The system should correctly identify the associated **performance/feedback record** and employee.

- Feedback should be saved successfully in the backend.
- The submitted feedback should then appear in the relevant **Employee Portal → Performance → Feedback** section.
- The employee should be able to view the feedback after it is submitted.



TICKET# 132:

Yes, both are valid issues and should be separate tickets because they involve different problems.

Ticket 1: Check-in Meeting Time Is Static and Cannot Be Edited or Deleted

Module: Admin Portal → Performance → Check-ins
Priority: Medium
Type: Functional / UI

Issue:
Scheduled check-ins are displayed with a fixed/static time, but there is no option for the Admin to **edit the scheduled date/time or delete/cancel the meeting**.

Expected Behavior:

- Admin should be able to edit a scheduled check-in.
- Admin should be able to change:

    - Employee
    - Meeting date
    - Meeting time
    - Topic/notes
- Admin should have a **Delete/Cancel** option for scheduled meetings.
- Changes should be reflected in the Employee Portal immediately.
- Once a meeting is completed, editing/deleting should be restricted according to the check-in lifecycle.

Ticket 2: Incorrect Manager Name Displayed in Employee Check-ins

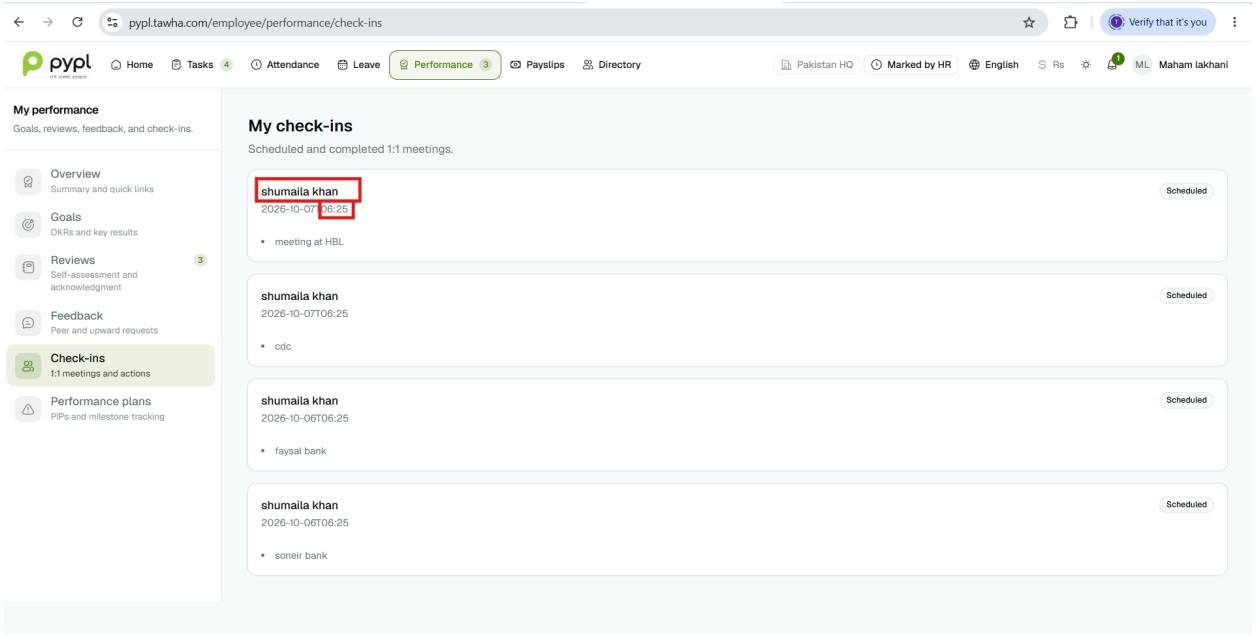
Module: Performance → Check-ins
Portals: Admin Portal → Employee Portal
Priority: High
Type: Data Mapping / Backend Integration

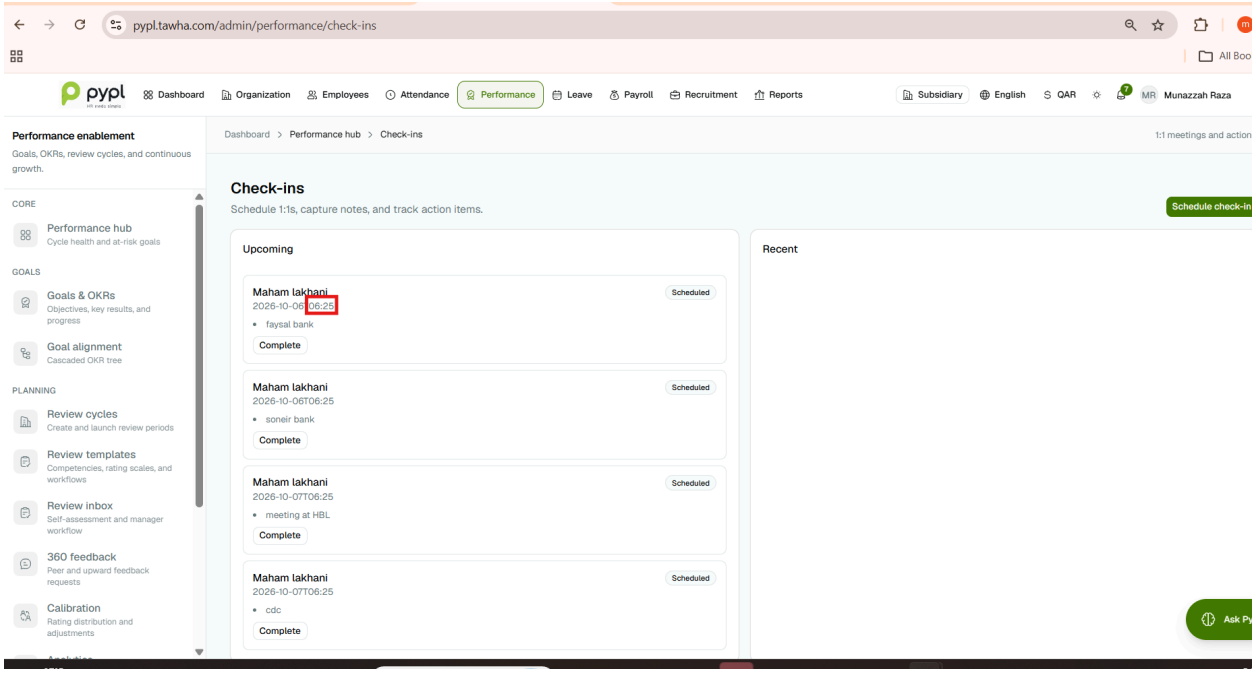
Issue:
The Admin schedules a check-in, but in the Employee Portal the check-in displays **"Shumaila Khan"** as the meeting/manager name even though the meeting was scheduled by the Admin.

The employee-facing check-in should reflect the **actual person assigned as the meeting organizer/manager**, not an unrelated employee.

Expected Behavior:

- The check-in must be correctly linked to:
    - Employee
    - Meeting organizer/manager
    - Date and time
    - Topic
- If Admin schedules the meeting, the system should correctly identify the Admin as the organizer **or** display the explicitly selected manager, depending on the intended workflow.
- Employee Portal should show the same correct participant/manager information as configured in Admin Portal.
- The system should not randomly/default to another employee such as **Shumaila Khan**.
- Admin and Employee Portal should use the same check-in record/ID and data source.





TICKET# 133:

Ticket: Performance Plan Shows “Record Not Found” Error

Module: Admin Portal → Performance → Performance Plans / PIPs
Priority: High
Type: Bug

Issue

When opening the created Performance Improvement Plan (PIP) for an employee, the PIP details are displayed correctly, but an error toast appears in the top-right:

> **“performance: record not found”**

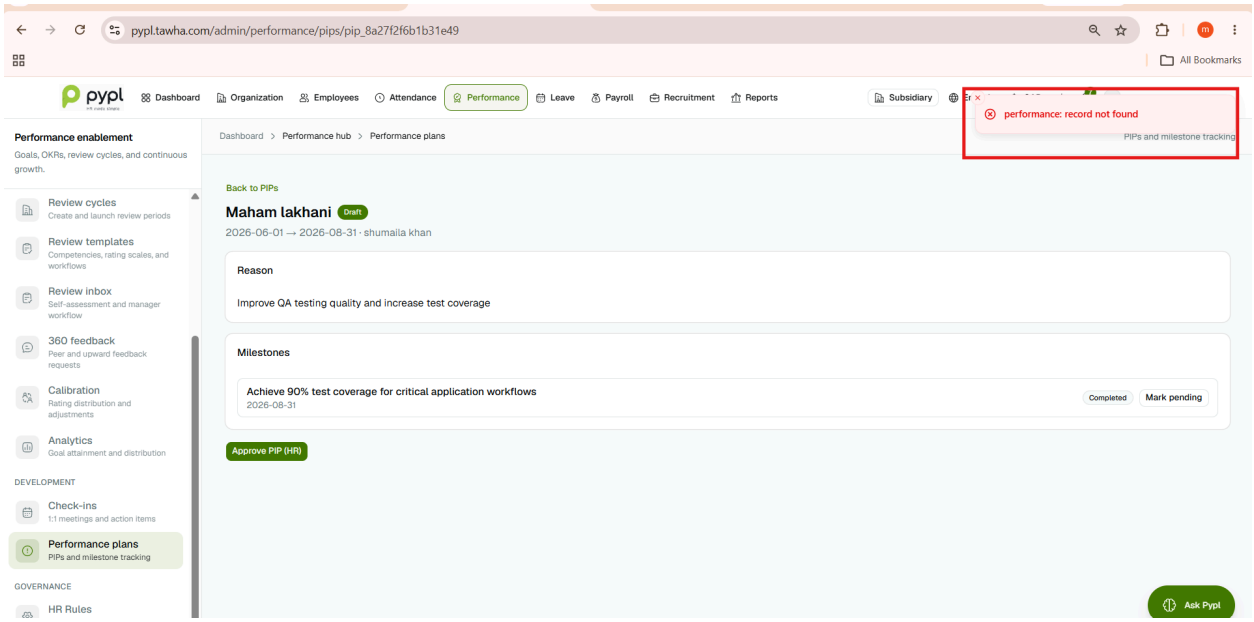
This indicates that the PIP page is unable to correctly resolve or fetch an associated performance record, even though the PIP itself exists and its details are visible.

Current Behavior

- PIP is successfully created for the employee.
- PIP details are displayed:
  - Employee: Maham Lakhani
  - Reason: Improve QA testing quality and increase test coverage
  - Milestone: Achieve 90% test coverage for critical application workflows
- However, the system simultaneously displays **“performance: record not found”**.
- This creates confusion and suggests that the PIP record is invalid or unavailable.

Expected Behavior

- Opening a valid PIP should **not display a “record not found” error**.
- The PIP should correctly load all related performance data.
- The PIP should be properly linked to the employee and the corresponding performance record.
- Actions such as **Approve PIP (HR)** and milestone updates should work without triggering the error.



TICKET# 134:

Ticket: Add Carry-Forward Rule Button Not Working

Module: Admin Portal → Leave → Carry Forward & Encashment
Priority: High
Type: Bug

Issue

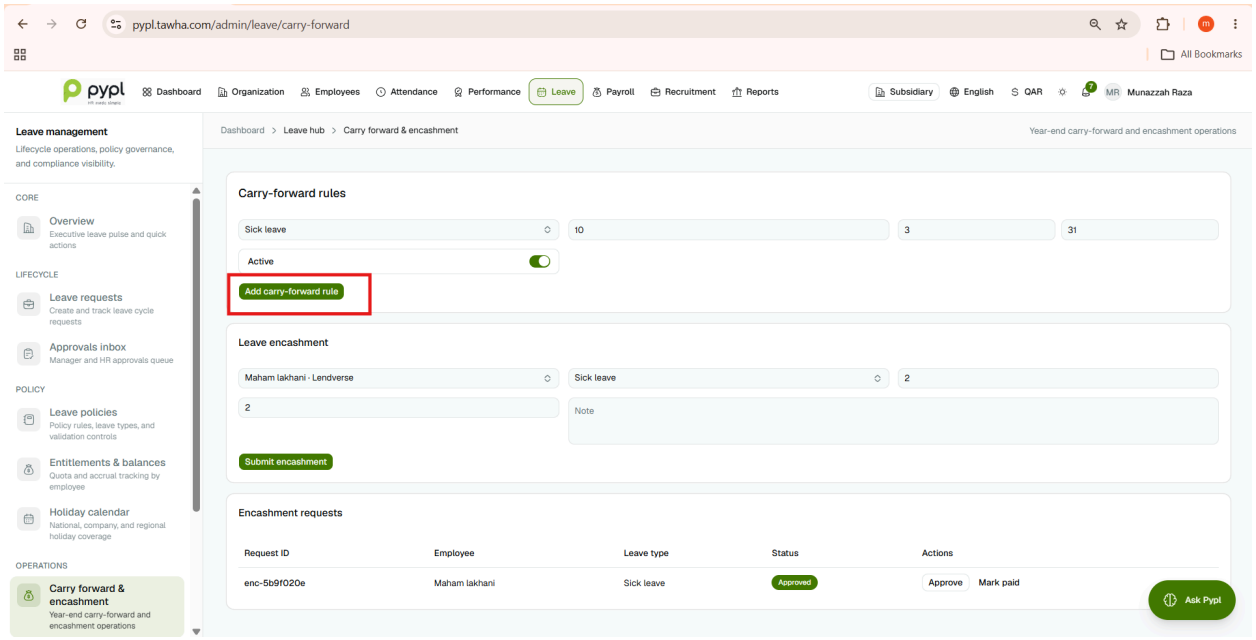
The **“Add carry-forward rule”** button is not clickable/does not perform any action, even when all required fields in the Carry-forward Rules section have been filled.

Current Behavior

- Leave type is selected.
- Carry-forward values are entered.
- Rule is marked **Active**.
- All visible fields appear to be completed.
- Clicking **“Add carry-forward rule”** does not add/create the rule and there is no validation message or error explaining why.

Expected Behavior

- The **“Add carry-forward rule”** button should become active once all mandatory fields are valid.
- Clicking it should add/save the carry-forward rule successfully.
- The newly added rule should appear in the Carry-forward Rules section.
- If any required field is missing or invalid, the system should clearly identify the field with an inline validation message.



TICKET# 135:

Ticket: Missing Labels for Carry-Forward & Encashment Fields

Module: Admin Portal → Leave → Carry Forward & Encashment
Priority: Medium
Type: UI/UX Improvement

Issue

Several input fields in the **Carry-forward Rules** and **Leave Encashment** sections do not have labels. The admin has to enter numeric values without knowing exactly what each field represents.

Current Behavior

In **Carry-forward Rules**, the fields are displayed as:

- Sick leave
- `10`
- `3`
- `31`
- Active

The numeric fields have no labels.

In **Leave Encashment**, the fields are displayed as:

- Maham Lakhani · Lendverse
- Sick leave
- `2`
- `2`
- Note

The two numeric fields are also unlabeled, making their purpose unclear.

Expected Behavior

All input fields should have clear and descriptive labels.

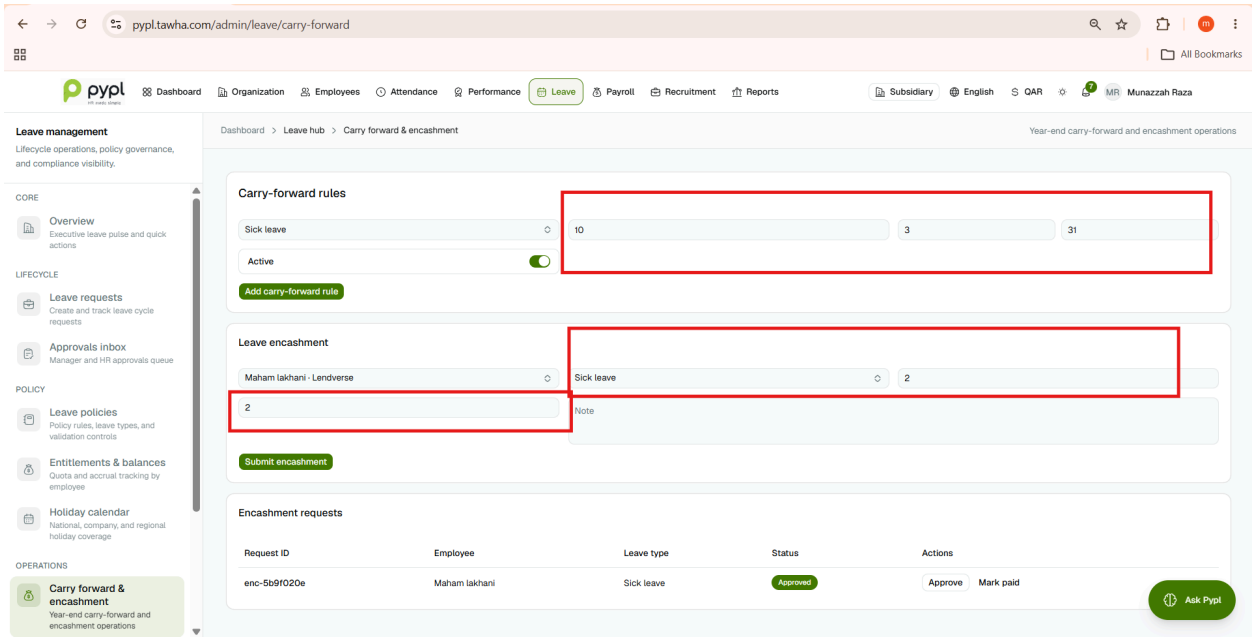
Carry-forward Rules:

- Leave Type
- Carry-Forward Limit (Days)
- Minimum Balance (Days)
- Expiry Day
- Status

Leave Encashment:

- Employee
- Leave Type

- Encashment Days
- Encashment Amount/Rate *(based on the actual business logic)*
- Note



TICKET# 136:

Ticket: Import Template Has No File Upload Mechanism

Module: Admin Portal → Leave → Holiday Calendar
Priority: High
Type: Functional / UX Bug

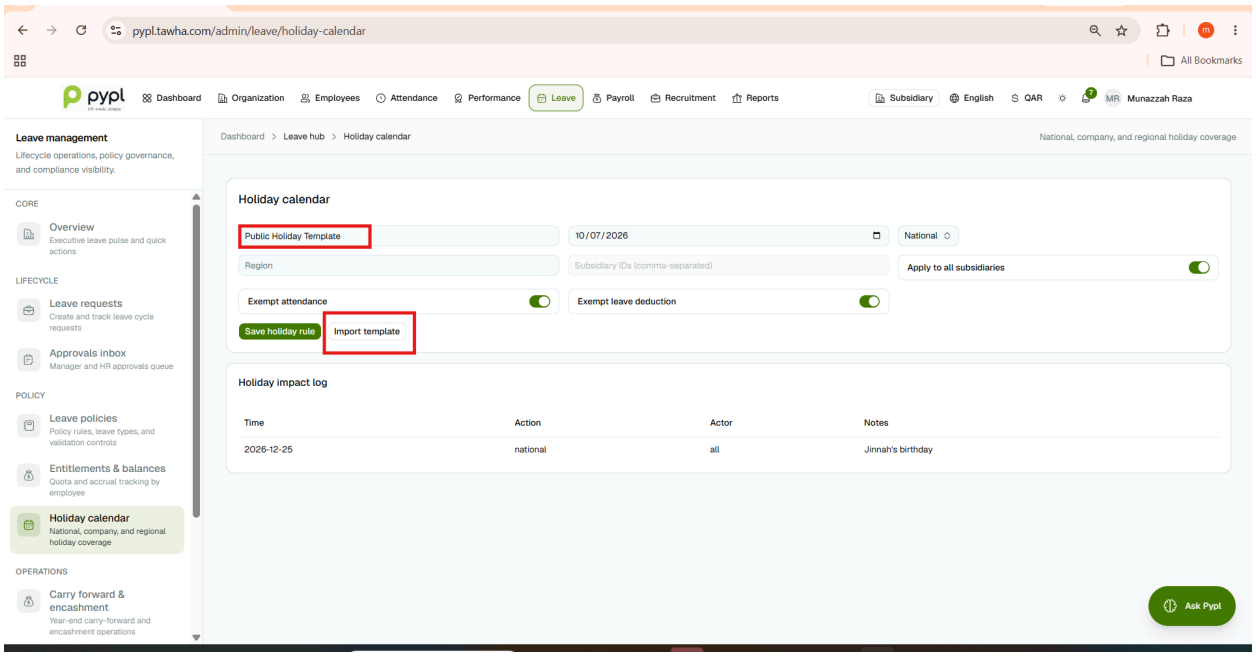
Issue:
Clicking **"Import template"** does not provide any file-upload mechanism. The screen shows a **Public Holiday Template** field, but there is no option to select or upload a template file.

Expected Behavior:
Clicking **Import template** should open an import interface/modal containing:

- **Upload Template** / **Choose File**
- Supported formats, e.g. CSV/XLSX
- **Download Sample Template** option

- File validation
- Import/Cancel buttons
- Clear error message for invalid file formats or data

If **“Public Holiday Template”** is actually supposed to be a dropdown rather than a file upload, it should be clearly implemented as a dropdown and the **Import template** button should have an understandable purpose.



TICKET# 136:

Ticket: Holiday Impact Log Actions Column Not Displayed

Module: Admin Portal → Leave → Holiday Calendar
Priority: Medium
Type: UI/Functional Bug

Issue

In the **Holiday Impact Log**, the **Actions** column is not displayed in the Tawha environment, while the same screen in the Vercel environment contains an **Actions** column with a **Delete** action for each holiday record.

Current Behavior

Tawha environment:

- Columns shown: **Time, Action, Actor, Notes**
- **Actions** column is missing.
- Admin has no visible option to delete an existing holiday record.

Vercel environment:

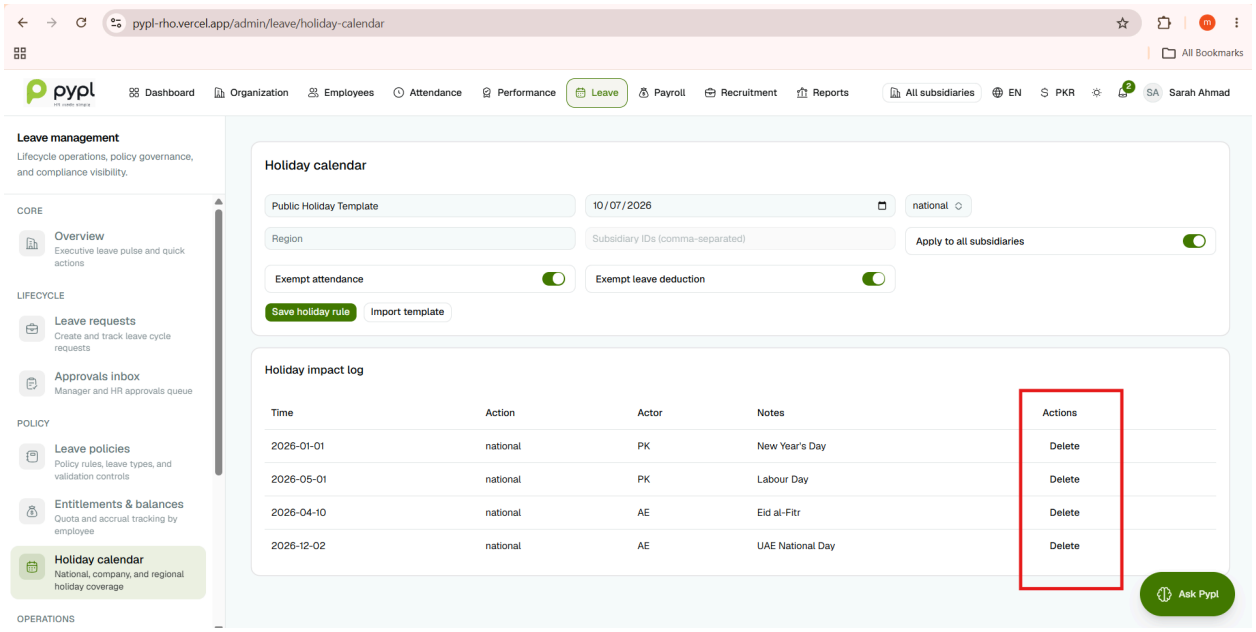
- Columns shown: **Time, Action, Actor, Notes, Actions**
- Each holiday record has a **Delete** action.

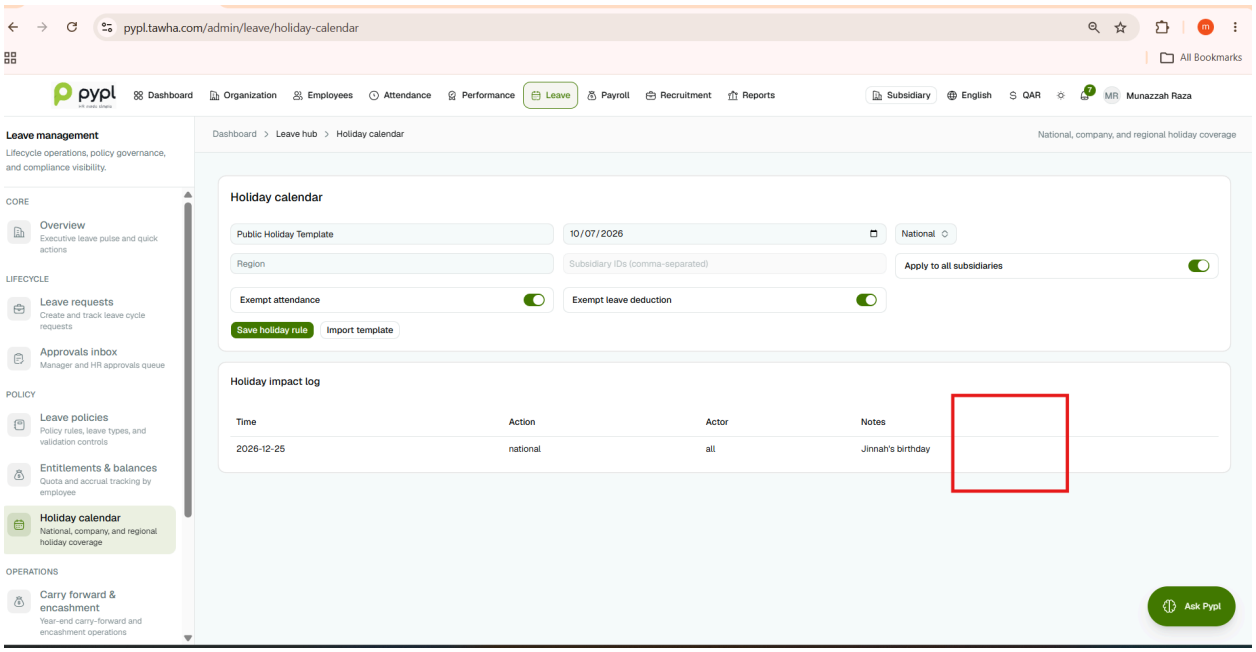
Expected Behavior

The Holiday Impact Log should provide the same functionality across environments.

The **Actions** column should be displayed and contain the appropriate action, e.g.:

Time	Action	Actor	Notes	Actions
2026-01-01	national	PK	New Year's Day	Delete
2026-05-01	national	PK	Labour Day	Delete





TICKET# 137:

Ticket: Tax Documents Are Hard-Coded and Not Linked to Admin Payroll

Module: Employee Portal → Payslips → Tax Documents
Priority: High
Type: Functional / Integration Bug

Issue

The **Tax Documents** section in the Employee Portal appears to contain hard-coded tax documents instead of dynamically displaying documents generated or configured through the **Admin Portal**.

Currently, the employee sees entries such as:

- **Tax certificate 2025** — 2026-01-31
- **WPS / salary transfer summary 2025** — 2026-02-01

These records should be linked to the employee's actual payroll/tax records maintained by the Admin Portal.

Expected Behavior

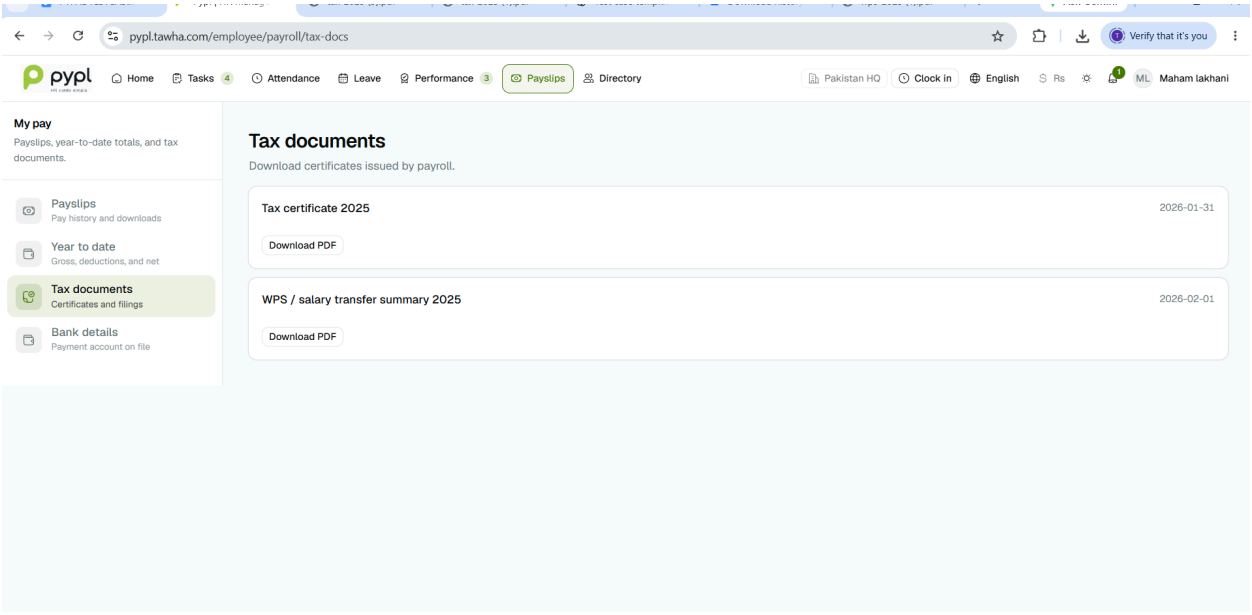
Tax documents should be **dynamically generated and linked with the Admin Portal payroll/tax module**.

The flow should be:

Admin Portal → Payroll/Tax Documents → Generate/Publish Document → Employee Portal → Tax Documents

The employee should only see tax documents that:

- Belong to the logged-in employee.
- Have actually been generated/published by Admin/Payroll.
- Correspond to the applicable tax/payroll year.
- Contain the employee's actual payroll/tax information.



TICKET# 138:

Ticket: Employee Year-to-Date Payroll Data Not Linked to Admin Payroll

Module: Employee Portal → Payslips → Year to Date
Priority: High
Type: Functional / Integration Bug

Issue

The **Year to Date** section in the Employee Portal is showing:

> "No payslips yet. They appear after payroll is locked."

However, payroll data should be available once the corresponding payroll run has been processed/locked in the **Admin Portal**.

Currently, the Employee Portal does not appear to be receiving or displaying the employee's payroll/YTD data from the Admin Portal.

Expected Behavior

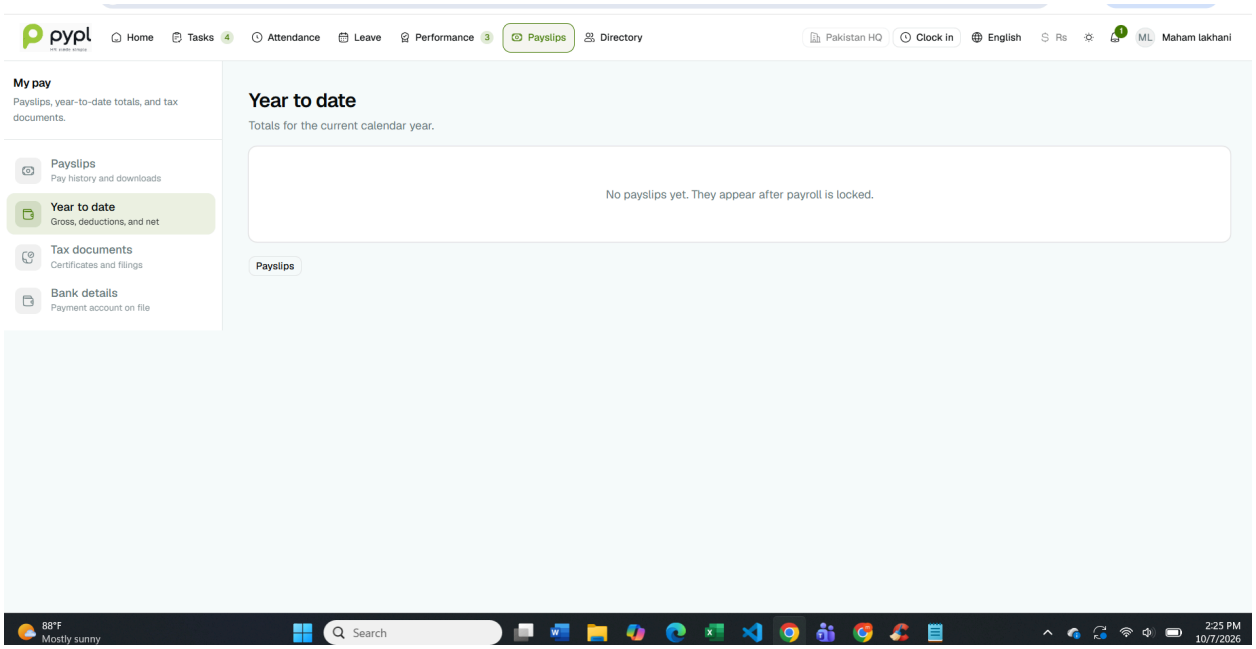
The Employee Portal **Year to Date** section should be dynamically linked to the Admin Portal payroll records.

Once Admin completes and locks a payroll run:

Admin Portal → Payroll Run → Lock/Publish → Employee Portal → Year to Date

The employee should see their actual:

- Gross earnings
- Total deductions
- Net pay
- Year-to-date totals
- Relevant payroll periods/payslips



TICKET# 139:

Ticket: HR Dashboard Metrics Showing Incorrect/Zero Values

Module: Admin Portal → Dashboard
Priority: High
Type: Functional / Data Integration Bug

Issue

Several HR Dashboard KPI cards are displaying **0 or incorrect values**, even though related data exists in the system.

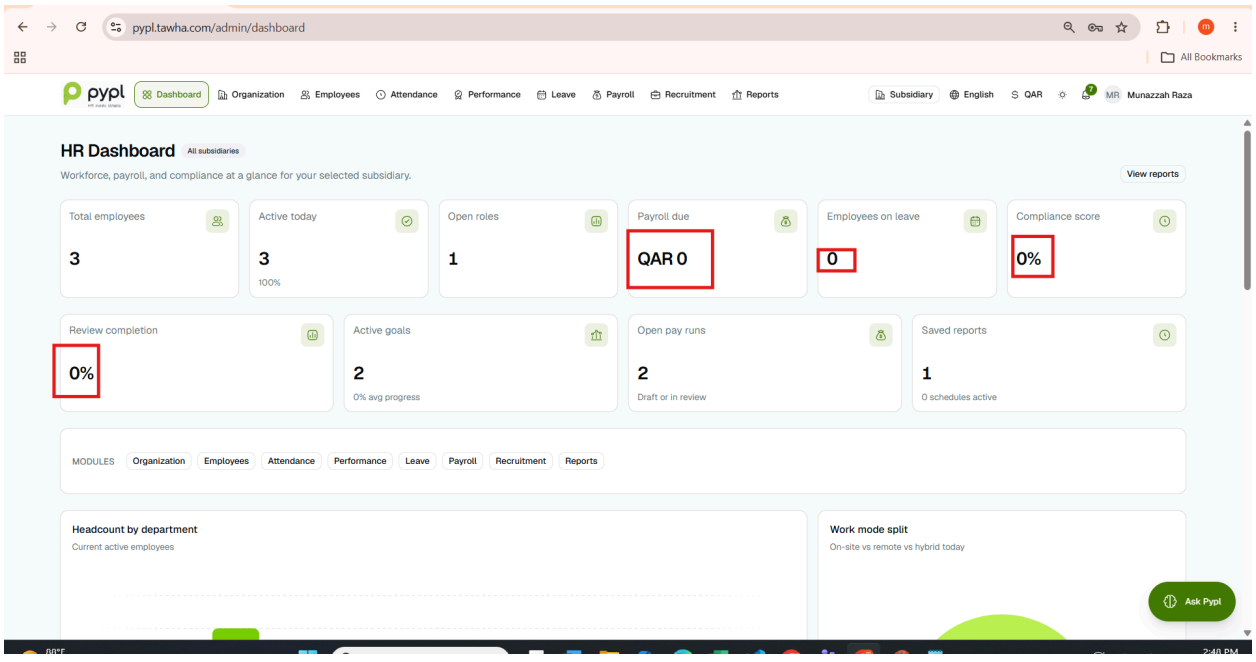
Affected metrics visible in the screenshot:

- **Payroll due:** `QAR 0`
- **Employees on leave:** `0`
- **Compliance score:** `0%`
- **Review completion:** `0%`
- **Active goals:** 2 but showing **0% average progress**
- **Open pay runs:** 2

The dashboard should be dynamically calculated from the actual data available across the respective modules.

Expected Behavior

The dashboard should fetch and calculate data



TICKET# 140:

Ticket: Scheduled Report Email Delivery Failing

Module: Admin Portal → Reports → Scheduled Delivery
Priority: High
Type: Bug / Email Delivery

Issue

Scheduled reports are failing to deliver to the configured recipients. The **Delivery Log** shows the scheduled report `lendverse` with status **Failed**, and the system displays the error:

> "organization mail delivery failed"

The same failure is also displayed in the error notification for multiple recipient email addresses.

Expected Behavior

- Scheduled reports should be successfully sent to all valid configured recipients through the organization's SMTP/email service.
- If delivery fails, the system should provide a meaningful error explaining the actual cause (SMTP configuration, authentication, invalid recipient, connection failure, etc.).
- The system should not simply return the generic `organization mail delivery failed` message if a more specific error is available.
